## List of contributors ix

- Introduction Modelling human development: In brief** 1  
*Philip T. Quinlan*  
A personal perspective 2  
The structure of the book 6  
References 11
- 1. A connectionist perspective on Piagetian development** 13  
*Sylvain Sirois and Thomas R. Shultz*  
Piaget's mechanisms of change 15  
The CC generative algorithm 18  
A model of conservation 23  
A model of discrimination shifts 31  
General discussion 37  
References 39
- 2. Connectionist models of learning and development in infancy** 43  
*Denis Mareschal*  
Processing a single source of information: The case of perceptual categorisation 44  
Processing multiple sources of information: The case of phoneme discrimination 52  
The impact of architectural constraints: The case of infants and objects 57

	Encapsulated processing modules: The case of the perception of object unity	65
	General discussion and future directions	76
	References	78
<b>3.</b>	<b>The role of prefrontal cortex in perseveration: Developmental and computational explorations</b>	<b>83</b>
	<i>Yuko Munakata, J. Bruce Morton, and Jennifer Merva Stedron</i>	
	Introduction	83
	Prefrontal cortex and perseveration	86
	Dissociations	101
	Decalage	105
	Discussion	107
	Conclusion	110
	References	111
<b>4.</b>	<b>Language acquisition in a self-organising neural network model</b>	<b>115</b>
	<i>Ping Li</i>	
	Introduction	115
	The interaction between verb semantics and morphology	118
	Self-organising neural network and language acquisition	122
	A SOFM model of lexical and morphological acquisition	128
	Conclusions	142
	References	145
<b>5.</b>	<b>Connectionist modelling of lexical segmentation and vocabulary acquisition</b>	<b>151</b>
	<i>Matt H. Davis</i>	
	The acquisition of lexical segmentation	154
	Vocabulary acquisition	161
	Simulation 1: Learning to identify words in connected speech	167
	Simulation 2: Combining phonological learning and vocabulary acquisition	173
	General discussion	179
	References	184
<b>6.</b>	<b>Less is less in language acquisition</b>	<b>189</b>
	<i>Douglas L. T. Rohde and David C. Plaut</i>	
	Elman (1991, 1993)	191
	Goldowsky and Newport (1993)	205
	Kareev, Lieberman, and Lev (1997)	212
	Cochran, McDonald, and Parault (1999)	218
	Kersten and Earles (2001)	220
	General discussion	223
	Conclusion	228
	References	229

<b>7. Pattern learning in infants and neural networks</b>	<b>233</b>
<i>Michael Gasser and Eliana Colunga</i>	
Patterns	234
Pattern learning in neural networks	239
Simulations	245
Conclusions	254
References	254
<b>8. Does visual development aid visual learning?</b>	<b>257</b>
<i>Melissa Dominguez and Robert A. Jacobs</i>	
Developmental and nondevelopmental models	264
Data sets and simulation results	270
Concluding remarks	275
References	276
<b>9. Learning and brain development: A neural constructivist perspective</b>	<b>279</b>
<i>Steven R. Quartz</i>	
The problem of developmental change	279
Constructive learning and the time-dependent properties of developing cortex	288
Dynamic developmental constraints	294
From hierarchical development to a behavioural systems view	296
References	305
<b>10. Cross-modal neural development</b>	<b>311</b>
<i>Mark T. Wallace</i>	
Cross-modal perceptual and behavioural processes	311
The adult superior colliculus as a model for studying multisensory processing	313
Multisensory integration at the neuronal level	315
Multisensory integration at the behavioural level	318
The role of cortex in multisensory integration	319
The universality of multisensory integration	322
The development of human multisensory processes	323
The superior colliculus: A model for sensory development	324
The development of multisensory neurons	325
The development of influences from cortex	328
Multisensory development in nonhuman primates	330
The role of experience in multisensory development	330
Cross-modal plasticity	335
Towards a connectionist model of cross-modal development	336
Concluding remarks	337
References	338
<b>11. Evolutionary connectionism</b>	<b>345</b>
<i>Peter McLeod and Bodo Maass</i>	

viii CONTENTS

Weight evolution and the emergence of goal-directed behaviour	347
Evolution of learning rules and the recognition of speech	351
Structural evolution and the discovery of a visual-motor coordination algorithm	355
Conclusion	364
References	364
