PART I
The interdisciplinary field 1

1 Complexity theory: a positioning paper 3

2 From Descartes’ conjecture to Kant’s subject and the computo 29

3 Autopoiesis in cognitive biology 47

4 Emergentism, evolutionary psychology and culture 61

5 Prigogine’s thermodynamics, ontology and sociology 81

PART II
Critical developments 103

6 Modernism and determinism: linear expectations and qualitative complexity analyses 105

7 Complexity theory as a critique of post-modernism 129

8 Cognition and the renewal of systems theory: redundant idioms and disputed positions 164

9 The evolution of intelligence, consciousness and language: implications for social theory 181

10 Complexity, language and culture: social systems in qualitative, i.e. not formal, terms 198
PART III
The fields of complex analysis: contemporary complexity theory

11 The ethics of pragmatism: politics and post-structuralism in transition after the complexity turn 211

12 The topology of complexity 213

13 Re-interpreting global complexity as an ontology: human ecology 241
