

# Contents

<i>Preface</i>	<i>page x</i>
<b>I. Introduction to Text Mining</b>	1
I.1 Defining Text Mining	1
I.2 General Architecture of Text Mining Systems	13
<b>II. Core Text Mining Operations</b>	19
II.1 Core Text Mining Operations	19
II.2 Using Background Knowledge for Text Mining	41
II.3 Text Mining Query Languages	51
<b>III. Text Mining Preprocessing Techniques</b>	57
III.1 Task-Oriented Approaches	58
III.2 Further Reading	62
<b>IV. Categorization</b>	64
IV.1 Applications of Text Categorization	65
IV.2 Definition of the Problem	66
IV.3 Document Representation	68
IV.4 Knowledge Engineering Approach to TC	70
IV.5 Machine Learning Approach to TC	70
IV.6 Using Unlabeled Data to Improve Classification	78
IV.7 Evaluation of Text Classifiers	79
IV.8 Citations and Notes	80
<b>V. Clustering</b>	82
V.1 Clustering Tasks in Text Analysis	82
V.2 The General Clustering Problem	84
V.3 Clustering Algorithms	85
V.4 Clustering of Textual Data	88
V.5 Citations and Notes	92

<b>VI. Information Extraction</b>	94
VI.1 Introduction to Information Extraction	94
VI.2 Historical Evolution of IE: The Message Understanding Conferences and Tipster	96
VI.3 IE Examples	101
VI.4 Architecture of IE Systems	104
VI.5 Anaphora Resolution	109
VI.6 Inductive Algorithms for IE	119
VI.7 Structural IE	122
VI.8 Further Reading	129
<b>VII. Probabilistic Models for Information Extraction</b>	131
VII.1 Hidden Markov Models	131
VII.2 Stochastic Context-Free Grammars	137
VII.3 Maximal Entropy Modeling	138
VII.4 Maximal Entropy Markov Models	140
VII.5 Conditional Random Fields	142
VII.6 Further Reading	145
<b>VIII. Preprocessing Applications Using Probabilistic and Hybrid Approaches</b>	146
VIII.1 Applications of HMM to Textual Analysis	146
VIII.2 Using MEMM for Information Extraction	152
VIII.3 Applications of CRFs to Textual Analysis	153
VIII.4 TEG: Using SCFG Rules for Hybrid Statistical–Knowledge-Based IE	155
VIII.5 Bootstrapping	166
VIII.6 Further Reading	175
<b>IX. Presentation-Layer Considerations for Browsing and Query Refinement</b>	177
IX.1 Browsing	177
IX.2 Accessing Constraints and Simple Specification Filters at the Presentation Layer	185
IX.3 Accessing the Underlying Query Language	186
IX.4 Citations and Notes	187
<b>X. Visualization Approaches</b>	189
X.1 Introduction	189
X.2 Architectural Considerations	192
X.3 Common Visualization Approaches for Text Mining	194
X.4 Visualization Techniques in Link Analysis	225
X.5 Real-World Example: The Document Explorer System	235
<b>XI. Link Analysis</b>	244
XI.1 Preliminaries	244

XI.2 Automatic Layout of Networks	246
XI.3 Paths and Cycles in Graphs	250
XI.4 Centrality	251
XI.5 Partitioning of Networks	259
XI.6 Pattern Matching in Networks	272
XI.7 Software Packages for Link Analysis	273
XI.8 Citations and Notes	274
<b>XII. Text Mining Applications</b>	275
XII.1 General Considerations	276
XII.2 Corporate Finance: Mining Industry Literature for Business Intelligence	281
XII.3 A “Horizontal” Text Mining Application: Patent Analysis Solution Leveraging a Commercial Text Analytics Platform	297
XII.4 Life Sciences Research: Mining Biological Pathway Information with GeneWays	309
<b>Appendix A: DIAL: A Dedicated Information Extraction Language for Text Mining</b>	317
A.1 What Is the DIAL Language?	317
A.2 Information Extraction in the DIAL Environment	318
A.3 Text Tokenization	320
A.4 Concept and Rule Structure	320
A.5 Pattern Matching	322
A.6 Pattern Elements	323
A.7 Rule Constraints	327
A.8 Concept Guards	328
A.9 Complete DIAL Examples	329
<i>Bibliography</i>	337
<i>Index</i>	391
