Preface to the Third Edition XV

List of Contributors XVII

Abbreviations XXIII

1	Introduction	1
1	History	1
1.2	Enzyme Nomenclature	4
1.2.1	General Principles of Nomenclature	5
1.2.2	Classification and Numbering of Enzymes	5
1.3	Structure of Enzymes	7
1.3.1	Primary Structure	7
1.3.2	Three-Dimensional Structure	7
1.3.3	Quaternary Structure, Folding, and Domains	8
1.3.4	The Ribozyme	11
1.4	Enzymes and Molecular Biology	12
1.4.1	Biosynthesis of Enzymes	12
1.4.2	Enzymes and DNA	12
2	Catalytic Activity of Enzymes	13
2.1	Factors Governing Catalytic Activity	15
2.1.1	Temperature	15
2.1.2	Value of pH	16
2.1.3	Activation	16
2.1.4	Inhibition	16
2.1.5	Allostery	18
2.1.6	Biogenic Regulation of Activity	19
2.2	Enzyme Assays	21
2.2.1	Reaction Rate as a Measure of Catalytic Activity	21
2.2.2	Definition of Units	21
2.2.3	Absorption Photometry	22
2.2.4	Fluorometry	24
2.2.5	Luminometry	24
2.2.6	Radiometry	25

2.2.7	Potentiometry	25
2.2.8	Conductometry	26
2.2.9	Calorimetry	26
2.2.10	Polarimetry	26
2.2.11	Manometry	26
2.2.12	Viscosimetry	26
2.2.13	Turbidimetry	27
2.2.14	Immobilized Enzymes	27
2.2.15	Electrophoresis	27
2.3	Quality Evaluation of Enzyme Preparations	29
2.3.1	Quality Criteria	29
2.3.2	Specific Activity	29
2.3.3	Protein Determination	30
2.3.4	Contaminating Activities	31
2.3.5	Electrophoretic Purity	31
2.3.6	High-Performance Liquid Chromatography	32
2.3.7	Performance Test	32
2.3.8	Amino Acid Analysis and Protein Sequence Analysis	32
2.3.9	Stability	33
2.3.10	Formulation of Enzyme Preparations	33

3 General Production Methods 35

3.1	Microbial Production	35
3.1.1	Organism and Enzyme Synthesis	35
3.1.2	Strain Improvement	38
3.1.3	Physiological Optimization	39
3.1.4	The Fermentor and its Limitations	42
3.1.5	Process Design	44
3.1.6	Modeling and Optimization	46
3.1.7	Instrumentation and Control	47
3.2	Isolation and Purification	48
3.2.1	Preparation of Biological Starting Materials	48
3.2.1.1	Cell Disruption by Mechanical Methods	50
3.2.1.2	Cell Disruption by Nonmechanical Methods	50
3.2.2.	Separation of Solid Matter	51
3.2.2.1	Filtration	51
3.2.2.2	Centrifugation	52
3.2.2.3	Extraction	54
3.2.2.4	Flocculation and Flotation	54
3.2.3	Concentration	55
3.2.3.1	Thermal Methods	55
3.2.3.2	Precipitation	55
3.2.3.3	Ultrafiltration	56
3.2.4	Purification	58

3.2.4.1	Crystallization	59
3.2.4.2	Electrophoresis	60
3.2.4.3	Chromatography	60
3.2.5	Product Formulation	65
3.2.6	Waste Disposal	68
3.3	Immobilization	68
3.3.1	Definitions	69
3.3.2	History	69
3.3.3	Methods	70
3.3.3.1	Carrier Binding	70
3.3.3.2	Cross-linking	74
3.3.3.3	Entrapment	74
3.3.4	Characterization	77
3.3.5	Application	78
4	Discovery and Development of Enzymes	81
4.1	Enzyme Screening	81
4.1.1	Overview	81
4.1.2	Natural Isolate Screening	82
4.1.3	Molecular Screening	84
4.1.4	Environmental Gene Screening	85
4.1.5	Genomic Screening	86
4.1.6	Proteomic Screening	89
4.2	Protein Engineering	90
4.2.1	Introduction	90
4.2.2	Application of Protein Engineering in Academia and Industry	94
4.2.3	Outlook	97
5	Industrial Enzymes	99
5.1	Enzymes in Food Applications	99
5.1.1	Enzymes in Baking	99
5.1.1.1	Introduction	99
5.1.1.2	Amylases	104
5.1.1.3	Xylanases	105
5.1.1.4	Oxidoreductases	106
5.1.1.5	Lipases	108
5.1.1.6	Proteases	109
5.1.1.7	Transglutaminase	111
5.1.2	Enzymes in Fruit Juice Production and Fruit Processing	111
5.1.2.1	Introduction	111
5.1.2.2	Biochemistry of Fruit Cell Walls	112
5.1.2.3	Cell-Wall-Degrading Enzymes	115
5.1.2.4	Apple Processing	117
5.1.2.4.1	Apple Pulp Maceration	117

5.1.2.4.2	Apple Juice Depectinization	118
5.1.2.5	Red-Berry Processing	120
5.1.2.6	Tropical Fruit and Citrus Processing	121
5.1.2.7	Conclusion	123
5.1.3	Enzymes in Brewing	123
5.1.3.1	Introduction	123
5.1.3.2	Enzymes in Malting and Mashing	125
5.1.3.3	Enzymes for Problem Prevention or Solving	128
5.1.3.3.1	Bacterial α -Amylase in Mashing	128
5.1.3.3.2	Fungal α -Amylase in Fermentation	129
5.1.3.3.3	β -Glucanase in Mashing	129
5.1.3.3.4	Cysteine Endopeptidases (Postfermentation)	130
5.1.3.3.5	Glucoamylase in Mashing	130
5.1.3.4	Enzymes for Process Improvement	130
5.1.3.4.1	Adjunct Brewing	130
5.1.3.4.2	Improved Mashing Processes	131
5.1.3.4.3	Shelf-Life Improvement	132
5.1.3.4.4	Accelerated Maturation	133
5.1.3.4.5	Starch-Haze Removal	134
5.1.3.5	Special Brewing Processes	134
5.1.4	Enzymes in Dairy Applications	135
5.1.4.1	Introduction	135
5.1.4.2	Cheesemaking	135
5.1.4.2.1	Cheesemaking Process	135
5.1.4.2.2	Mechanism of Renneting	135
5.1.4.2.3	Types of Coagulants	136
5.1.4.2.4	Properties of Coagulating Enzymes	136
5.1.4.2.5	Cheese Ripening	138
5.1.4.2.6	Cheese Flavors and Ripening Acceleration	139
5.1.4.2.7	Lipase	140
5.1.4.2.8	Lysozyme	140
5.1.4.2.9	Milk Protein Hydrolysates	141
5.1.4.2.10	Transglutaminase	141
5.1.4.3	Milk Processing	142
5.1.4.3.1	β -Galactosidase	142
5.1.4.3.2	Other Enzymes	143
5.1.5	Other Food Applications	143
5.1.5.1	Introduction	143
5.1.5.2	Meat and Fish	143
5.1.5.2.1	Meat Processing	143
5.1.5.2.2	Fish Processing	144
5.1.5.3	Protein Cross-linking	145
5.1.5.4	Flavor Development	146
5.1.5.4.1	Protein Hydrolysis	146
5.1.5.4.2	Lipid Hydrolysis	147

5.1.5.5	Egg Powder	148
5.1.5.6	Oils and Fats	149
5.1.5.6.1	Fat Splitting	149
5.1.5.6.2	Interesterification	150
5.1.5.6.3	Esterification	153
5.1.5.6.4	Oil Degumming	153
5.2	Enzymes in Nonfood Applications	154
5.2.1	Enzymes in Household Detergents	154
5.2.1.1	Historical Development	154
5.2.1.2	Laundry Soils	155
5.2.1.3	Detergent Composition and Washing Process	157
5.2.1.3.1	Washing Process	157
5.2.1.3.2	Detergent Compositions	158
5.2.1.4	Enzyme-Aided Detergency and Soil Removal	160
5.2.1.5	Detergent Enzyme Performance Evaluation and Screening	160
5.2.1.6	Enzyme Types	164
5.2.1.6.1	Proteases	164
5.2.1.6.2	Amylases	167
5.2.1.6.3	Lipases	171
5.2.1.6.4	Cellulases	173
5.2.1.6.5	Mannanase	176
5.2.1.7	Future Trends	177
5.2.2	Enzymes in Automatic Dishwashing	178
5.2.2.1	Introduction	178
5.2.2.2	Characteristics of Enzymes for ADDs	179
5.2.2.3	Proteases	180
5.2.2.3.1	Proteins: The Substrate of Proteases	180
5.2.2.3.2	Proteases for ADDs	181
5.2.2.4	Amylases	182
5.2.2.4.1	Starch: The Substrate of Amylases	182
5.2.2.4.2	Amylases for ADDs	183
5.2.2.5	Other Enzymes	186
5.2.2.6	Automatic Dishwashing Detergents	186
5.2.2.6.1	Composition of Automatic Dishwashing Detergents	186
5.2.2.6.2	Application of Enzymes in ADD	187
5.2.2.6.3	Stability and Compatibility	192
5.2.3	Enzymes in Grain Wet-Milling	193
5.2.3.1	Introduction	193
5.2.3.2	Overview of the Conversion of Corn to HFCS	193
5.2.3.2.1	Corn Steeping	195
5.2.3.2.2	Coarse Grinding and Germ Removal by Cyclone Separation	196
5.2.3.2.3	Fine Grinding and Fiber Removal by Screening	196
5.2.3.2.4	Centrifugation and Washing to Separate Starch from Protein	196
5.2.3.2.5	Hydrolysis with α -Amylase (Liquefaction)	196
5.2.3.2.6	Hydrolysis with Glucoamylase (Saccharification)	197

5.2.3.2.7	Isomerization with Glucose Isomerase	197
5.2.3.2.8	Fructose Enrichment and Blending	198
5.2.3.3	α -Amylase	198
5.2.3.3.1	Origin and Enzymatic Properties	198
5.2.3.3.2	Structure	199
5.2.3.3.3	Industrial Use	201
5.2.3.4	Glucoamylase	201
5.2.3.4.1	Origin and Enzymatic Properties	201
5.2.3.4.2	Structure	202
5.2.3.4.3	Industrial Use	203
5.2.3.5	Pullulanase	204
5.2.3.5.1	Origin and Enzymatic Properties	204
5.2.3.5.2	Structure	204
5.2.3.5.3	Industrial Use	205
5.2.3.6	Glucose Isomerase	205
5.2.3.6.1	Origin and Enzymatic Properties	205
5.2.3.6.2	Structure	206
5.2.3.6.3	Industrial Use of Glucose Isomerase	207
5.2.3.7	Use of Wheat Starch	208
5.2.3.8	New Technology for Fuel Ethanol Production	209
5.2.4	Enzymes in Animal Feeds	209
5.2.4.1	Introduction	209
5.2.4.2	Enzymes Used in Animal Feed	211
5.2.4.2.1	Fiber-Degrading Enzymes	211
5.2.4.2.2	Phytic Acid Degrading Enzymes (Phytases)	214
5.2.4.2.3	Protein-Degrading Enzymes (Proteases)	216
5.2.4.2.4	Starch-Degrading Enzymes (Amylases)	217
5.2.4.3	Future Developments	218
5.2.5	Enzymes in Textile Production	218
5.2.5.1	Introduction	218
5.2.5.2	Cellulose Fibers	219
5.2.5.2.1	Desizing of Cotton Cellulose Fibers	219
5.2.5.2.2	Scouring of Cotton	219
5.2.5.2.3	Bleaching of Cotton	221
5.2.5.2.4	Removal of Hydrogen Peroxide	221
5.2.5.2.5	Cotton Finishing	222
5.2.5.2.6	Ageing of Denim	223
5.2.5.2.7	Processing of Man-Made Cellulose Fibers	224
5.2.5.2.8	Processing of Bast Fibers	225
5.2.5.3	Proteinous Fibers	225
5.2.5.3.1	Wool Processing	225
5.2.5.3.2	Degumming of Silk	227
5.2.5.4	Textile Effluent Treatment and Recycling	228
5.2.5.5	Outlook	230
5.2.6	Enzymes in Pulp and Paper Processing	231

5.2.6.1	Introduction	231
5.2.6.2	Enzymes	233
5.2.6.2.1	Cellulases	233
5.2.6.2.2	Hemicellulases	233
5.2.6.2.3	Lignin-Modifying, Oxidative Enzymes	235
5.2.6.3	Enzymes in Pulp and Paper Processing	237
5.2.6.3.1	Mechanical Pulping	237
5.2.6.3.2	Chemical Pulping	238
5.2.6.3.3	Bleaching	239
5.2.6.3.4	Papermaking	242
5.2.6.3.5	Deinking	243
5.3	Development of New Industrial Enzyme Applications	244
5.3.1	Introduction	244
5.3.2	Enzymes in Cosmetics	246
5.3.2.1	Hair Dyeing	246
5.3.2.1.1	Oxidases	247
5.3.2.1.2	Peroxidases	248
5.3.2.1.3	Polyphenol Oxidases	248
5.3.2.2	Hair Waving	249
5.3.2.3	Skin Care	249
5.3.2.4	Toothpastes and Mouthwashes	250
5.3.2.5	Enzymes in Cleaning of Artificial Dentures	251
5.3.3	Enzymes for Preservation	251
5.3.4	Enzymes in Hard-Surface Cleaning	252
5.3.4.1	Enzymes in Membrane Cleaning	252
5.3.4.1.1	Proteases	253
5.3.4.1.2	Hemicellulases	253
5.3.5	Enzymes Generating a pH Shift	253
5.3.6	Enzymes in Cork Treatment	254
5.3.7	Enzymes in Oil-Field Applications	255
5.3.8	Enzymes in Wastewater Treatment	255
5.3.9	Enzymes for Polymerisation: Wood Fiberboard Production	256
5.3.10	Enzymes in Composting	256
5.3.11	Application of Bacteriorhodopsin in Security Printing and Data Storage	257
5.4	Overview of Industrial Enzyme Applications	257
6	Nonindustrial Enzyme Usage	263
6.1	Enzymes in Organic Synthesis	263
6.1.1	Introduction	263
6.1.2	Examples of Enzymatic Conversions	264
6.1.2.1	Syntheses by Means of Hydrolases	264
6.1.2.2	Reduction of C=O and C=C Bonds	268
6.1.2.3	Oxidation of Alcohols and Oxygenation of C-H and C=C Bonds	270
6.1.2.4	C-C Coupling	272

6.1.2.5	Formation of Glycosidic Bonds	274
6.1.2.6	Enzymatic Protecting Group Techniques	274
6.1.3	Enzyme-Analogous Catalysts	276
6.1.4	Commercial Applications	280
6.1.4.1	General	280
6.1.4.2	Nonstereoselective Biocatalytic Reactions	280
6.1.4.3	Biocatalytic Resolution Processes	282
6.1.4.3.1	Enzymatic Acylation of Amino Groups	287
6.1.4.3.2	Enzymatic Hydrolysis of Hydantoins	287
6.1.4.3.3	Enzymatic Hydrolysis of Lactams	291
6.1.4.3.4	Enzymatic Hydrolysis of C–O Bonds	291
6.1.4.3.5	Enzymatic Hydrolysis of Nitriles	294
6.1.4.3.6	Enzymatic Cleavage of <i>threo</i> Aldol Products	294
6.1.4.4	Biocatalytic Asymmetric Synthesis	294
6.1.4.4.1	Biocatalytic Reductive Amination of C=O Bonds	295
6.1.4.4.2	Biocatalytic Hydrocyanation of C=O Bonds	296
6.1.4.4.3	Biocatalytic Addition of Water to C=O Bonds	297
6.1.4.4.4	Biocatalytic Amination of C=C Bonds	297
6.1.5	Outlook	297
6.2	Therapeutic Enzymes	298
6.2.1	Requirements for the Use of Enzymes in Therapy	298
6.2.2	Coping with Peculiar Protein Properties	299
6.2.3	Sources of Enzymes and Production Systems	301
6.2.4	Overview of Therapeutic Enzymes	303
6.2.4.1	Oxidoreductases	303
6.2.4.2	Transferases	309
6.2.4.3	Esterases	310
6.2.4.4	Nucleases	310
6.2.4.5	Glycosidases	311
6.2.4.6	Proteases	314
6.2.4.6.1	Pancreatic and Gastric Proteases	314
6.2.4.6.2	Plasma Proteases	314
6.2.4.6.3	Coagulation Factors	315
6.2.4.6.4	Plasminogen Activators	316
6.2.4.6.5	Proteases from Snake Venoms	319
6.2.4.6.6	Plant and Microbial Proteases	319
6.2.4.7	Amidases	320
6.2.4.8	Lyases	321
6.3	Analytical Applications of Enzymes	321
6.3.1	Determination of Substrate Concentration	322
6.3.2	Determination of Enzyme Activity	324
6.3.3	Immunoassays	325
6.3.4	Enzyme Dipsticks and Enzyme Sensors	327
6.4	Enzymes for Food Analysis	328
6.4.1	Carbohydrates	329

6.4.2	Organic Acids	332
6.4.3	Alcohols	336
6.4.4	Other Food Ingredients	338
6.5	Enzymes in Genetic Engineering	340
6.5.1	Restriction Endonucleases and Methylases	343
6.5.1.1	Classification	343
6.5.1.2	Activity of Class II Restriction Endonucleases	354
6.5.1.2.1	Reaction Parameters	354
6.5.1.2.2	Additional Structural Requirements Influencing Activity	355
6.5.1.3	Specificity of Class II Restriction Endonucleases	356
6.5.1.3.1	Palindromic Recognition Sequences	356
6.5.1.3.2	Nonpalindromic Recognition Sequences	358
6.5.1.3.3	Isoschizomers	359
6.5.1.4	Changes in Sequence Specificity	360
6.5.1.5	Novel Class II Restriction Endonucleases	362
6.5.2	DNA Polymerases	363
6.5.2.1	<i>Escherichia coli</i> DNA Polymerase I	363
6.5.2.2	Klenow Enzyme	365
6.5.2.3	T4 DNA Polymerase	365
6.5.2.4	Reverse Transcriptase	367
6.5.2.5	Terminal Transferase	368
6.5.3	RNA Polymerases	370
6.5.3.1	SP6 RNA Polymerase	370
6.5.3.2	T7 RNA Polymerase	372
6.5.4	DNA Nucleases	373
6.5.4.1	DNase I	373
6.5.4.2	Exonuclease III	374
6.5.4.3	Nuclease S1	374
6.5.4.4	Nuclease Bal 31	375
6.5.5	RNA Nucleases	377
6.5.5.1	RNase H	377
6.5.5.2	Site-Specific RNases	378
6.5.5.2.1	RNase A	378
6.5.5.2.2	RNase CL3	378
6.5.5.2.3	RNase T ₁	378
6.5.5.2.4	RNase U ₂	379
6.5.5.2.5	Nuclease S7	379
6.5.5.2.6	Site-Specific RNases in RNA Sequence Analysis	379
6.5.6	Modifying Enzymes	382
6.5.6.1	Alkaline Phosphatase	382
6.5.6.2	T4 DNA Ligase	402
6.5.6.3	<i>Escherichia coli</i> DNA Ligase	403
6.5.6.4	T4 Polynucleotide Kinase	403

- 6.5.6.5 T4 Polynucleotide Kinase, 3'-Phosphatase-Free 404
- 6.5.6.6 Methylase *Hpa*II 406

- 7 Enzyme Safety and Regulatory Considerations 409**
 - 7.1 Safe Handling of Enzymes 409
 - 7.1.1 Possible Health Effects 409
 - 7.1.2 Control Technology 410
 - 7.2 Product Regulatory Considerations 413
 - 7.2.1 Food-Use Enzymes 414
 - 7.2.2 Feed-Use Enzymes 419
 - 7.2.3 Industrial-Use Enzymes 420
