Contents

Preface .................................................................................................................. v
 Contributors ..................................................................................................... xiii

1. Analysis of Organelles by On-Line Two-Dimensional Liquid
   Chromatography–Tandem Mass Spectrometry ................................. 1
   Edwin P. Romijn and John R. Yates III

PART I: ANALYSIS OF ORGANELLES, VESICLES,
AND PROTEIN MACHINERIES

2. Purification and Proteomic Analysis of Chloroplasts and their
   Sub-Organellar Compartments .......................................................... 19
   Daniel Salvi, Norbert Rolland, Jacques Joyard,
   and Myriam Ferro

3. Proteomic Analysis of the Stacked Golgi Complex ....................... 37
   Mark S. Lowenthal, Kathryn E. Howell,
   and Christine C. Wu

4. Purification of Saccharomyces cerevisiae Mitochondria by Zone
   Electrophoresis in a Free Flow Device ........................................... 51
   Hans Zischka, Norbert Kinkl, Ralf J. Braun,
   and Marius Ueffing

5. Preparation of Respiratory Chain Complexes from Saccharomyces
   cerevisiae Wild-Type and Mutant Mitochondria: Activity
   Measurement and Subunit Composition Analysis .......................... 65
   Claire Lemaire and Geneviève Dujardin

6. Mitochondrial Proteomics: Analysis of a Whole Mitochondrial
   Extract with Two-Dimensional Electrophoresis ............................ 83
   Thierry Rabilloud

7. Purification and Proteomic Analysis of the Mouse Liver
   Mitochondrial Inner Membrane ....................................................... 101
   Sandrine Da Cruz and Jean-Claude Martinou
8. Subcellular Fractionation and Proteomics of Nuclear Envelopes .......................................................... 117
   Laurence Florens, Nadia Korfali, and Eric C. Schirmer

9. Purification and Proteomic Analysis of a Nuclear-Insoluble Protein Fraction ........................................ 139
   Tsuneyoshi Horigome, Kazuhiro Furukawa, and Kohei Ishii

10. Preparation Methods of Human Metaphase Chromosomes for their Proteome Analysis ............................. 149
    Kiichi Fukui, Hideaki Takata, and Susumu Uchiyama

11. Purification and Proteomic Analysis of Plant Plasma Membranes ......................................................... 161
    Erik Alexandersson, Niklas Gustavsson, Katja Bernfurd, Adine Karlsson, Per Kjellbom, and Christer Larsson

12. Protocol to Enrich and Analyze Plasma Membrane Proteins from Frozen Tissues ..................................... 175
    Jacek R. Wiśniewski

13. Proteomic Characterization of Membrane Protein Topology ................................................................. 185
    Adele R. Blackler and Christine C. Wu

    Markus Islinger and Gerhard Weber

15. Use of Gas-Phase Fractionation to Increase Protein Identifications: Application to the Peroxisome ............ 217
    Jacob Kennedy and Eugene C. Yi

16. Purification and Proteomic Analysis of Lysosomal Integral Membrane Proteins ........................................ 229
    Huiwen Zhang, Xiaolian Fan, Rick Bagshaw, Don J. Mahuran, and John W. Callahan

17. Affinity Purification of Soluble Lysosomal Proteins for Mass Spectrometric Identification .......................... 243
    Sylvie Kieffer-Jaquino, Agnès Chapel, Jérôme Garin, and Agnès Journet

18. Purification and Proteomic Analysis of Synaptic Vesicles ................................................................. 259
    Holly D. Cox and Charles M. Thompson
19. Purification and Proteomics Analysis of Pancreatic Zymogen Granule Membranes ........................................ 275
   Xuequn Chen and Philip C. Andrews

20. Isolation and Proteomic Analysis of Chlamydomonas Centrioles ... 289
   Lani C. Keller and Wallace F. Marshall

21. Purification and Proteomic Analysis of 20S Proteasomes from Human Cells ........................................ 301
   Marie-Pierre Bousquet-Dubouch, Sandrine Uttenweiler-Joseph,
   Manuelle Ducoux-Petit, Mariette Matondo,
   Bernard Monsarrat, and Odile Burlet-Schiltz

   Isabelle Iost, Julie Charollais, Joëlle Vinh,
   and Delphine Pfleger

PART II: PROTEINS IDENTIFIED IN THE ORGANELLE SAMPLE:
TRUE COMPONENTS OR CONTAMINANTS?

23. Assessment of Organelle Purity Using Antibodies and Specific Assays: The Example of the Chloroplast Envelope ............. 345
   Daniel Salvi, Norbert Rolland, Jacques Joyard, and Myriam Ferro

24. Identifying Bona Fide Components of an Organelle by Isotope-Coded Labeling of Subcellular Fractions: An Example in Peroxisomes ......................................................... 357
   Marcello Marelli, Alexey I. Nesvizhskii, and John D. Aitchison

25. Determination of Genuine Residents of Plant Endomembrane Organelles using Isotope Tagging and Multivariate Statistics .... 373
   Kathryn S. Lilley and Tom P. J. Dunkley

26. Quantitative Proteomic Analysis to Profile Dynamic Changes in the Spatial Distribution of Cellular Proteins .................. 389
   Wei Yan, Daehee Hwang, and Ruedi Aebersold

27. Use of Transcriptomic Data to Support Organelle Proteomic Analysis ....................................................... 403
   Wallace F. Marshall

Index ....................................................................................... 415
