Preface xix
Acknowledgments xxiii
User’s Guide xxv

Part One Introduction 1

1 The future of the airport and airline industry 3
  1-1 The airport industry at the end of the twentieth century 4
  1-2 Long-term growth 9
  1-3 Commercialization 14
  1-4 Globalization 18
  1-5 Electronic commerce 21
      Electronic ticketing 21
      Electronic commerce 22
  1-6 Implications for airports systems planning and design 25
Exercises 26
References 26

2 International differences 29
  2-1 Introduction 30
  2-2 Some physical differences 31
      Check-in facilities 32
      Aircraft contact stands 33
Contents

2-3 Some useful distinctions 38
  National differences in diversity of decision making 39
  National differences in performance criteria 43
2-4 Implications for practice 47
  General implications 47
  Specific implications 49
Exercises 54
References 55

Part Two System planning 57

3 Dynamic strategic planning 59
  3-1 Forms of planning 60
    Plans 60
    Master plans 62
    Strategic plans 64
  3-2 Airport systems planning 65
    Airport systems 65
    Planning airport systems 67
  3-3 The forecast is “always wrong” 70
    Cost estimation 72
    Aggregate forecasts 74
    Composition of forecasts 76
    Effect of longer planning periods 77
    Effect of economic deregulation 79
  3-4 Implications for planning 80
  3-5 Dynamic strategic planning concepts 81
  3-6 Dynamic strategic planning process and methods 83
Exercises 88
References 89

4 Privatization and deregulation 93
  4-1 The airport and airline industry before privatization and deregulation 94
    Airports 94
    Airlines 97
5 Multi-airport systems  129

5-1 Introduction  129
5-2 Basic concepts and issues  132
    Definitions  132
    Prevalence  133
    Unequal size  135
5-3 Difficulties  138
    Insufficient traffic at new airport  139
    Difficulty in closing old airport  141
    Insufficient traffic overall  142
    Impractical to allocate traffic  144
    Volatility of traffic at secondary airport  146
    Overall perspective  147
5-4 Market dynamics  149
    Concentration due to sales opportunities  149
    Airlines concentrate on routes  150
    Airlines concentrate at primary airports  152
    Factors favoring multi-airport systems  154
5-5 Planning and developing multi-airport systems  157
    Landbanking  158
    Incremental development  160
6 Environmental impacts 167
6-1 Introduction 167
6-2 Fundamentals of noise measurement 170
    Measuring aircraft noise 171
    Certification of aircraft for noise 182
    Practical implications 185
6-3 Mitigating airport noise 186
    Noise monitoring systems 187
    Community relations and public participation programs 190
    Land-use policies 191
    Airport design interventions 194
    Surface operations and flight operations 195
    Interventions outside airport properties near existing sites 198
    Access restrictions 199
    Economic incentives 201
6-4 Air quality and mitigation of air pollution 202
6-5 Water quality control 206
    Deicing fluids (ADF) 206
    Fuel leaks and spills 208
    Storm water runoff 208
6-6 Control of highway and road access traffic 209
6-7 Wildlife management 210
Exercises 211
References 212

7 Organization and financing 215
7-1 Introduction 216
7-2 Ownership and management of airports 217
7-3 Organizational structures 225
7-4 Regulatory constraints on airport user charges 233
    Price caps 235
Contents

“Single Till” versus “Dual Till” 237
Residual versus compensatory 241
7-5 Financing capital investments 243
Outright government grants 243
Special-purpose user taxes 244
Low-cost loans from international or national development banks 244
Operating surpluses 244
Loans from commercial banks 245
General-obligation bonds 245
Revenue bonds 245
Private financing against specified rights to airport revenues 246
Exercises 249
References 249

8 User charges 251
8-1 Introduction 252
8-2 Cost and revenue centers 253
8-3 Guidelines and background for the setting of user charges 258
8-4 The various types of airport user charges 260
Landing fee 261
Terminal area air navigation fee 262
Aircraft parking and hangar charges 262
Airport noise charge 263.
Passenger service charge 264
Cargo service charge 265
Security charge 265
Ground handling charges 266
En route air navigation fee 266
8-5 Non-aeronautical charges 268
Concession fees for aviation fuel and oil 268
Concession fees for commercial activities 269
Revenues from car parking and car rentals 269
Rental of airport land, space in buildings, and assorted equipment 269
Fees charged for airport tours, admissions, etc. 270
Contents

Fees derived from provision of engineering services and reimbursable utilities by the airport operator to airport users 270
Non-airport revenues 270
8-6 Distribution of airport revenues by source 270
8-7 Comparing user charges at different airports 274
Government funding 274
Content and quality of services offered 275
Volume of traffic 275
Characteristics of traffic 275
General cost environment 276
Accounting practices 276
Treatment of aeronautical users 276
8-8 Ground handling services 277
8-9 Landing fee computation: average-cost pricing 283
8-10 Historical cost versus current cost 288
Exercises 290
References 291

Part Three The airside 293

9 Airfield design 295
9-1 Introduction 296
9-2 Airport classification codes and design standards 300
    Practical implications 302
    Runway designation and classification 311
9-3 Wind coverage 312
9-4 Airport layouts 314
    Land area requirements and related observations 315
    Geometric characteristics 319
9-5 Runway length 328
    Declared distances 330
    Usability of a runway 332
    Design length 334
9-6 Runway geometry 336
    Separations from other parts of the airfield 340
    Vertical profile 341
9-7 Taxiways 343
    Special cases 347
10 Airfield capacity  367
10-1 Introduction  369
10-2 Measures of runway capacity  370
10-3 Factors that affect the capacity of a runway system  376
   Number and geometric layout of the runways  376
   ATM separation requirements  377
   Visibility, ceiling, and precipitation  388
   Wind direction and strength  391
   Mix of aircraft  391
   Mix and sequencing of movements  394
   Type and location of runway exits  396
   State and performance of the ATM system  397
   Noise considerations  398
10-4 Range of airfield capacities and capacity coverage  400
10-5 A model for computing the capacity of a single runway  408
10-6 Generalizations and extensions of the capacity model  416
10-7 Capacity of other elements of the airfield  422
   Capacity of the taxiway system  422
   Capacity of the aprons  424
Exercises  430
References  432

11 Airfield delay  435
11-1 Introduction  436
11-2 The characteristics of airside delays  437
11-3 Policy implications and practical guidelines  444
11-4 The annual capacity of a runway system  450
11-5 Computing delays in practice  455
Exercises  457
References  459

Contents

13-6 Near- and medium-term enhancements 545
   GPS-based navigation 545
   Automatic dependent surveillance 547
   Digital communications 548
   Weather data 548
   Automation and decision-support systems 548
Exercises 551
References 554

Part Four  The landside 557

14 Configuration of passenger buildings 559

14-1 Importance of selection 560
14-2 Systems requirements for airport passenger buildings 563
   Passenger perspective 565
   Airline perspective 568
   Owners' perspective 570
   Retail perspective 572
   Government agencies 573
   Balance 574
14-3 Five basic configurations 574
   Finger piers 576
   Satellites 577
   Midfield concourses 580
   Linear buildings 582
   Transporters 584
   Centralized and dispersed 586
14-4 Evaluation of configurations 587
   Walking distances 588
   Aircraft delays 594
   Transporter economics 595
   Flexibility 599
14-5 Assessment of configurations 600
14-6 Hybrid configurations in practice 602
Exercises 603
References 603
15 Overall design of passenger buildings 605
15-1 Specification of traffic loads 607
   The issue 607
   Peak-hour basis for design 608
   Nature of loads 610
15-2 Shared use reduces design loads 611
   Drivers for shared use 612
   Analysis methods 616
   Overall implications of sharing 634
15-3 Space requirements for waiting areas 636
   Importance of level of service 636
   Importance of dwell time 639
15-4 Space requirements for passageways 643
   The formulas 645
   Effective width 647
15-5 Areas for baggage handling and mechanical systems 649
Exercises 652
References 652

16 Detailed design of passenger buildings 655
16-1 Design standards 656
16-2 Identification of hot spots 660
16-3 Analysis of possible hot spots 664
16-4 Simulation of passenger buildings 669
16-5 Specific facilities 673
   Queues 676
   Check-in areas 677
   Security and border checkpoints 678
   Moving walkways 680
   Waiting lounges 680
   Concession Space 682
   Baggage claim areas 684
   Curbside and equivalent areas 685
Exercises 688
References 689

17 Ground access and distribution 693
17-1 Introduction 694
19 Models of airport operations  747
   19-1 Background  747
   19-2 Classification of models  748
      Level of detail  748
      Methodology  749
      Coverage  750
   19-3 Airside models and issues in model selection  750
      Principal existing airside models  750
      Selection criteria  753
   19-4 Models of passenger building operations  756
      Model availability  757
      Data requirements  758
      Repeated versus one-time model use  759
      Model development process  760
      Communicating the results  761

Exercises  762
References  763

20 Forecasting  765
   20-1 Forecasting assumptions  766
   20-2 Fundamental mathematics  769
   20-3 Forecasts  771
   20-4 Scenarios  775
   20-5 Integrated procedure  776

Exercises  777
References  777

21 Cash flow analysis  779
   21-1 Introduction  779
   21-2 Discounting and the discount rate  780
   21-3 Present and annual value of monetary flows  782
   21-4 Notes on computing  785
   21-5 Measures of project effectiveness  788

Exercises  797
References  801

22 Decision and options analysis  803
   22-1 The issue  803
## Contents

22-2 Decision analysis concept 804
22-3 Decision analysis method 806
22-4 Options analysis concept 812
   Financial options 814
   “Real” options 815
22-5 Options analysis method 816
Exercises 817
References 817

### 23 Flows and queues at airports 819

23-1 Introduction 820
23-2 Describing an airport queuing system 821
   The user generation process 822
   The service process 823
   The queuing process 826
23-3 Typical measures of performance and level of service (LOS) 828
   Utilization ratio 828
   Expected waiting time and expected number in queue 829
   Variability 829
   Reliability 830
   Maximum queue length 831
   The psychology of queues 831
23-4 Short-term behavior of queuing systems 833
23-5 Cumulative diagrams 835
23-6 Long-term behavior of queuing systems 842
   Little’s law 843
   Relationship between congestion and utilization 843
23-7 Policy implications 847
Exercises 849
References 850

### 24 Peak-hour analysis 851

24-1 Introduction 851
24-2 Definition of the design peak hour 853
24-3 Conversion of annual forecasts into DPH Forecasts 854
24-4 DPH estimates of aircraft movements 860
