Time-Resolved Chemistry: From Structure to Function
A General Discussion on

Time-Resolved Chemistry:
From Structure to Function

A General Discussion on Time-Resolved Chemistry was held at the University of Manchester, UK on 24th, 25th and 26th June, 2002.

Contents
1 Introductory Lecture: Time-resolved chemistry at atomic resolution
Philip Coppens and Irina V. Novozhilova
13 The realization of sub-nanosecond pump and probe experiments at the ESRF
Michael Wulff, Anton Plech, Laurent Eybert, Rudolf Randler, Friedrich Schotte and Philip Anfinrud
27 Femtosecond mid-infrared spectroscopy of condensed phase hydrogen-bonded systems as a probe of structural dynamics
Matteo Rini, Andreas Kummrow, Jens Dreyer, Erik T. J. Nibbering and Thomas Elsaesser
41 What we can learn about fast chemical processes from slow diffraction experiments
Hans-Beat Bürgi
65 The frontiers of time-resolved macromolecular crystallography: movies and chirped X-ray pulses
Keith Moffat
79 General Discussion
89 Achieving photo-control of protein conformation and activity: producing a photo-controlled leucine zipper
Janet R. Kumita, Daniel G. Flint, G. Andrew Woolley and Oliver S. Smart
105 First investigations of the kinetics of the topochemical reaction of $p$-formyl-$trans$-cinnamic acid by time-resolved X-ray diffraction
119 Nanosecond time-resolved crystallography of photo-induced species: case study and instrument development for high-resolution excited-state single-crystal structure determination
131 Time-resolved and static-ensemble structural chemistry of hydroxymethylbilane synthase
John R. Hellwell, Yeu Perng Nieh, Jarjis Habash, Paul F. Faulder, James Raftery, Michele Cianci, Michael Wulff and Alfons Hädener
145 Structural dynamics of the receptor-binding domain of colicin E9
163 The dynamic transition in proteins may have a simple explanation
Roy M. Daniel, John L. Finney and Jeremy C. Smith

This journal is © The Royal Society of Chemistry 2002
Mechanism of formation of DNA–cationic vesicle complexes
Paula C. A. Barreleiro, Roland P. May and Björn Lindman

Following the formation of nanometer-sized clusters by time-resolved SAXS and EXAFS techniques
Florian Meneau, Gopinathan Sankar, Norberto Morgante, Rudolf Winter, C. Richard A. Catlow, G. Neville Greaves and John Meurig Thomas

Application of stopped flow techniques and energy dispersive EXAFS for investigation of the reactions of transition metal complexes in solution: Activation of nickel β-diketonates to form homogeneous catalysts, electron transfer reactions involving iron(iii) and oxidative addition to iridium(i)
M. Basyaruddin B. Abdul Rahman, Peter R. Bolton, John Evans, Andrew J. Dent, Ian Harvey and Sofia Diaz-Moreno

Direct dynamics calculations of reaction rate and kinetic isotope effects in enzyme catalysed reactions
Gary Tresadern, Sara Nunez, Paul F. Faulder, Hong Wang, Ian H. Hillier and Neil A. Burton

Time-resolved computational protein biochemistry: Solvent effects on interactions, conformational transitions and equilibrium fluctuations
Alexander L. Tournier, Danzhi Huang, Sonja M. Schwarzl, Stefan Fischer and Jeremy C. Smith

Theoretical studies of time-resolved spectroscopy of protein folding
Jonathan D. Hirst, Samita Bhattacharjee and Alexey V. Onufriev

Chemistry, physics and time: the computer modelling of glassmaking
David Martlew

A SAXS/WAXS XAFS study of crystallisation in cordierite glass
G. N. Greaves, W. Bras, M. Oversluizen and S. M. Clark

Excited state molecular structure determination in disordered media using laser pump/X-ray probe time-domain X-ray absorption spectroscopy
Lin X. Chen

Recent results from the in situ study of hydrothermal crystallisations using time-resolved X-ray and neutron diffraction methods
Richard I. Walton, Alexander Norquist, Ronald I. Smith and Dermot O’Hare

Are metastable, precrystallisation, density-fluctuations a universal phenomena?

In situ neutron diffraction studies of single crystals and powders during microwave irradiation
Andrew Harrison, Richard Ibberson, Graeme Robb, Gavin Whittaker, Chick Wilson and Douglas Youngson

Concluding Remarks: Time-resolved chemistry: from structure to function. A summary
John Meurig Thomas
