I. Threats to Plant Population Viability

1	Why Plant Population Viability Assessment?	3
	M.W. SCHWARTZ and C.A. BRIGHAM	
1.1	Introduction	3
1.1.1	Book Structure	4
1.2	Why Plants Differ	5
1.3	Life Histories of Plants	8
1.4	Conclusion: Conservation Challenges for Plants	10
	References	12
2	Threats to Rare Plant Persistence	17
	J.G.B. OOSTERMEIJER	
2.1	Introduction	17
2.2	Delineating Different Types of Threats	18
2.2.1	Environmental Threats	19
2.2.1.1	Climate Change	19
2.2.1.2	Habitat Fragmentation and Degradation	19
2.2.1.3	Direct Destruction and Overexploitation of Populations	22
2.2.2	Disturbed Biotic Interactions	22
2.2.2.1	Pollen Limitation	22
2.2.2.2	Dispersal Limitation	23
2.2.2.3	Interactions with Exotic Species	23
2.2.2.4	Climate Change	24
2.2.2.5	Grazing and Trampling	25
2.2.3	Genetic Threats	25
2.2.3.1	Drift and Inbreeding	25
2.2.3.2	Inbreeding Effects	26
2.2.3.3	Loss of S-alleles	26
2.2.3.4	Reduced Adaptability	27

2.2.3.5	Genetic Variation in Endemic Plants	27
2.3	Managing Different Types of Threats	28
2.3.1	Managing Threats to Endemic Species	28
2.3.2	Managing Environmental Threats	29
2.3.2.1	Climate Change	30
2.3.2.2	Habitat Fragmentation	30
2.3.2.3	Edge Effects	31
2.3.2.4	Habitat Degradation	32
2.3.3	Managing Disturbed Biotic Interactions	33
2.3.3.1	Managing Mutualistic Interactions	34
2.3.3.2	Managing Herbivores and Pathogens	35
2.3.3.3	Managing Exotic Plant Species	36
2.3.4	Managing Genetic Threats	37
2.3.4.1	Managing Hybridization and Introgression	37
2.3.4.2	Managing Risks of Drift, Inbreeding and Outbreeding	37
2.4	Dealing with Threats in Plant PVAs	40
2.5	Conclusions	41
	References	43

3	Factors Affecting Persistence in Formerly Common and Historically Rare Plants	59
	C.A. BRIGHAM	
3.1	Introduction	59
3.1.1	General Background	59
3.1.2	Selection of Factors	60
3.1.3	Types of Rarity in Plants	61
3.2	Reductions in Genetic Diversity	62
3.2.1	Is There a Positive Correlation Between Genetic Diversity and Population Size in Plants?	63
3.2.2	Do Rare Plant Species Show Reduced Genetic Diversity in Comparison to More Common Congeners?	64
3.2.3	Is There Evidence for a Positive Correlation Between Reduced Genetic Diversity and Reduced Fitness in Plants?	68
3.2.4	Do Historically Rare and Formerly Common Species Show Similar Patterns of Correlations Between Population Size and Genetic Diversity?	71
3.2.5	Implications for PVAs	73
3.3	Competition	74
3.3.1	Is There Evidence for Competition with Native Species as a Cause of Rarity in Plants?	75
3.3.2	What Is the Role of Exotic Species in Plant Declines?	78

3.3.3 Competition in Historically Rare and Formerly Common Species 79

3.3.4 Implications for PVA 80

3.4 Loss of Pollinators at Low Abundance 80

3.4.1 Are Rare Plants in General Pollinator-Limited? 80

3.4.2 How Might We Expect Plant-Pollinator Relationships to Differ for Historically Rare and Formerly Common Species? 82

3.4.3 Implications for PVA 84

3.5 Herbivory and Seed Predation 84

3.5.1 Review of the Evidence for Effects of Herbivory and Seed Predation on Rare Plants 84

3.5.2 Historically Rare vs. Formerly Common Species: Expectations 85

3.5.3 Implications for PVA 88

3.6 Conclusions 88

3.6.1 Suggestions for Future Directions 89

3.6.2 Implications for PVA 91

References 91

4 The Relationship Between Plant-Pathogen and Plant-Herbivore Interactions and Plant Population Persistence in a Fragmented Landscape 99
 N.J. OUBORG and A. BIERE

4.1 Introduction 99

4.2 Effects of Habitat Fragmentation on Species Interactions 100

4.3 The Interaction Between Plants and Diseases and Herbivores 101

4.4 Habitat Fragmentation and Disease Susceptibility 103

4.4.1 Disease Incidence and Genetic Drift 104

4.4.2 Disease Incidence and Inbreeding 105

4.4.3 Disease Incidence and Population Dynamics: Thresholds 107

4.4.4 Disease Incidence and Multitrophic Interactions 109

4.5 Conclusions 111

References 111

5	The Origin and Extinction of Species Through Hybridization	117
	C.A. BUERKLE, D.E. WOLF and L.H. RIESEBERG	
5.1	Introduction: Consequences of Hybridization	117
5.1.1	Maintenance of Stable Hybrid Zones	118
5.1.2	Extinction Through Hybridization with Congeners	120
5.1.3	Hybrid Speciation and Adaptive Trait Introgression	123
5.2	The Relative Frequency Of Extinction, Homoploid Speciation and Other Consequences of Hybridization	127
5.2.1	Methods	127
5.2.2	Results	128
5.2.3	Discussion	129
5.3	Frequency of Outcomes: Overview	130
5.4	Species Conservation Among Hybridizing Taxa	134
5.4.1	Anthropogenic Disturbance and Hybridization	134
5.4.2	Conclusion: Implications for Population Viability Analysis and Management	135
	References	137

II. Modeling Approaches for Population Viability Analysis

6	Approaches to Modeling Population Viability In Plants: An Overview	145
	C.A. BRIGHAM and D.M. THOMSON	
6.1	Introduction	145
6.2	Unstructured Models	147
6.2.1	The Diffusion Approximation	147
6.2.2	When to Use Unstructured Models	150
6.3	Stage-Structured Models	151
6.3.1	Developing a Matrix Model	153
6.3.2	Sensitivity and Elasticity Analysis	155
6.3.3	When to Use Stage-Structured Models	157
6.4	Spatially Structured Models	158
6.4.1	Metapopulation Models	159
6.4.2	Spatially Structured Matrix Models	161
6.4.3	When to Use Spatially Structured Models	162
6.5	Genetics in Population Viability Analysis	163
6.6	Future Directions	164
6.7	Conclusions	166
	References	167

7	The Problems and Potential of Count-Based Population Viability Analyses	173
	B.D. ELDERD, P. SHAHANI, and D.F. DOAK	
7.1	Introduction	173
7.1.1	A Genealogy of Count-Based PVA	175
7.1.2	The Basics of Count-Based PVA	176
7.1.3	Problems and Criticisms of the DA Method of PVA	179
7.2	Methods	184
7.3	Results	187
7.3.1	Predictions of Population Growth	187
7.3.2	Predictions of Extinction Risk	190
7.3.3	Ranking Relative Risk	193
7.3.4	Effects of an Unseen Stage	197
7.4	Conclusion	197
	References	200
8	Habitat Models for Population Viability Analysis	203
	J. ELITH and M.A. BURGMAN	
8.1	Introduction	203
8.2	Methods for Building Habitat Models	205
8.2.1	Conceptual Models Based on Expert Opinion	205
8.2.2	Geographic Envelopes and Spaces	207
8.2.3	Climate Envelopes	209
8.2.4	Multivariate Association Methods	210
8.2.5	Regression Analysis	213
8.2.6	Tree-Based Methods	214
8.2.7	Machine Learning Methods	214
8.3	Issues Affecting Modeling Success	216
8.3.1	Comparison of Methods	216
8.3.1.1	Predictive Performance	216
8.3.1.2	Understanding the Methods	217
8.3.1.3	Estimating Error	217
8.3.1.4	Model Interpretability	218
8.3.2	Modeling Data	218
8.3.2.1	Species Data	218
8.3.2.2	Predictor Variables	219
8.3.3	Links Between Occupation and Quality of Habitat	220
8.3.4	Habitat and Patches	221
8.4	Assessing the Reliability of a Habitat Model	222

8.5	Application to <i>Leptospermum grandifolium</i>	224
8.6	Conclusions	228
	References	230

III. Addressing Plant Life Histories in Population Viability Analysis

9	Assessing Population Viability in Long-Lived Plants	239
	M.W. SCHWARTZ	
9.1	Introduction	239
9.2	Strategies for Population Viability Analysis	240
9.2.1	Population Trend Assessment	241
9.2.2	Transition Matrix Modeling	243
9.2.2.1	Insufficient Sampling Interval	244
9.2.2.2	Inaccurate Transition Probabilities and Complex Transitions	246
9.2.2.3	Transition Matrix Element Elasticity	248
