

Harold J. Kushner G. George Yin

Stochastic Approximation and Recursive Algorithms and Applications

Second Edition

With 31 Figures

Springer

Contents

Preface and Introduction	vii
1 Introduction: Applications and Issues	1
1.0 Outline of Chapter	1
1.1 The Robbins–Monro Algorithm	3
1.1.1 Introduction	3
1.1.2 Finding the Zeros of an Unknown Function	5
1.1.3 Best Linear Least Squares Fit	8
1.1.4 Minimization by Recursive Monte Carlo	12
1.2 The Kiefer–Wolfowitz Procedure	14
1.2.1 The Basic Procedure	14
1.2.2 Random Directions	17
1.3 Extensions of the Algorithms	19
1.3.1 A Variance Reduction Method	19
1.3.2 Constraints	21
1.3.3 Averaging of the Iterates: “Polyak Averaging”	22
1.3.4 Averaging the Observations	22
1.3.5 Robust Algorithms	23
1.3.6 Nonexistence of the Derivative at Some θ	24
1.3.7 Convex Optimization and Subgradients.	25
1.4 A Lagrangian Algorithm for Constrained Function Minimization	26

2 Applications to Learning, Repeated Games, State Dependent Noise, and Queue Optimization	29
2.0 Outline of Chapter	29
2.1 An Animal Learning Model	31
2.2 A Neural Network	34
2.3 State-Dependent Noise	37
2.4 Learning Optimal Controls	40
2.4.1 Q-Learning	41
2.4.2 Approximating a Value Function	44
2.4.3 Parametric Optimization of a Markov Chain Control Problem	48
2.5 Optimization of a GI/G/1 Queue	51
2.5.1 Derivative Estimation and Infinitesimal Perturbation Analysis: A Brief Review	52
2.5.2 The Derivative Estimate for the Queueing Problem	54
2.6 Passive Stochastic Approximation	58
2.7 Learning in Repeated Stochastic Games	59
3 Applications in Signal Processing, Communications, and Adaptive Control	63
3.0 Outline of Chapter	63
3.1 Parameter Identification and Tracking	64
3.1.1 The Classical Model	64
3.1.2 ARMA and ARMAX Models	68
3.2 Tracking Time Varying Systems	69
3.2.1 The Algorithm	69
3.2.2 Some Data	73
3.3 Feedback and Averaging	75
3.4 Applications in Communications Theory	76
3.4.1 Adaptive Noise Cancellation and Disturbance Rejection	77
3.4.2 Adaptive Equalizers	79
3.4.3 An ARMA Model, with a Training Sequence	80
3.5 Adaptive Antennas and Mobile Communications	83
3.6 Proportional Fair Sharing	88
4 Mathematical Background	95
4.0 Outline of Chapter	95
4.1 Martingales and Inequalities	96
4.2 Ordinary Differential Equations	101
4.2.1 Limits of a Sequence of Continuous Functions	101
4.2.2 Stability of Ordinary Differential Equations	104
4.3 Projected ODE	106
4.4 Cooperative Systems and Chain Recurrence	110

4.4.1	Cooperative Systems	110
4.4.2	Chain Recurrence	110
4.5	Stochastic Stability	112
5	Convergence w.p.1: Martingale Difference Noise	117
5.0	Outline of Chapter	117
5.1	Truncated Algorithms: Introduction	119
5.2	The ODE Method	125
5.2.1	Assumptions and the Main Convergence Theorem	125
5.2.2	Convergence to Chain Recurrent Points	134
5.3	A General Compactness Method	137
5.3.1	The Basic Convergence Theorem	137
5.3.2	Sufficient Conditions for the Rate of Change Condition	139
5.3.3	The Kiefer–Wolfowitz Algorithm	142
5.4	Stability and Combined Stability–ODE Methods	144
5.4.1	A Liapunov Function Method for Convergence	145
5.4.2	Combined Stability–ODE Methods	146
5.5	Soft Constraints	150
5.6	Random Directions, Subgradients, and Differential Inclusions	151
5.7	Animal Learning and Pattern Classification	154
5.7.1	The Animal Learning Problem	154
5.7.2	The Pattern Classification Problem	156
5.8	Non-Convergence to Unstable Points	157
6	Convergence w.p.1: Correlated Noise	161
6.0	Outline of Chapter	161
6.1	A General Compactness Method	162
6.1.1	Introduction and General Assumptions	162
6.1.2	The Basic Convergence Theorem	166
6.1.3	Local Convergence Results	169
6.2	Sufficient Conditions	170
6.3	Perturbed State Criteria	172
6.3.1	Perturbed Iterates	172
6.3.2	General Conditions for the Asymptotic Rate of Change	175
6.3.3	Alternative Perturbations	177
6.4	Examples of State Perturbation	180
6.5	Kiefer–Wolfowitz Algorithms	183
6.6	State-Dependent Noise	185
6.7	Stability-ODE Methods	189
6.8	Differential Inclusions	195
6.9	Bounds on Escape Probabilities	197

6.10	Large Deviations	201
6.10.1	Two-Sided Estimates	202
6.10.2	Upper Bounds	208
6.10.3	Bounds on Escape Times	210
7	Weak Convergence: Introduction	213
7.0	Outline of Chapter	213
7.1	Introduction	215
7.2	Martingale Difference Noise	217
7.3	Weak Convergence	226
7.3.1	Definitions	226
7.3.2	Basic Convergence Theorems	229
7.4	Martingale Limits	233
7.4.1	Verifying that a Process Is a Martingale	233
7.4.2	The Wiener Process	235
7.4.3	Perturbed Test Functions	236
8	Weak Convergence Methods for General Algorithms	241
8.0	Outline of Chapter	241
8.1	Exogenous Noise	244
8.2	Convergence: Exogenous Noise	247
8.2.1	Constant Step Size: Martingale Difference Noise	247
8.2.2	Correlated Noise	255
8.2.3	Step Size $\epsilon_n \rightarrow 0$	258
8.2.4	Random ϵ_n	261
8.2.5	Differential Inclusions	261
8.2.6	Time-Dependent ODEs	262
8.3	The Kiefer–Wolfowitz Algorithm	263
8.3.1	Martingale Difference Noise	264
8.3.2	Correlated Noise	265
8.4	State-Dependent Noise	269
8.4.1	Constant Step Size	270
8.4.2	Decreasing Step Size $\epsilon_n \rightarrow 0$	274
8.4.3	The Invariant Measure Method	275
8.4.4	General Forms of the Conditions	278
8.4.5	Observations Depending on the Past of the Iterate Sequence or Working Directly with Y_n^ϵ	280
8.5	Unconstrained Algorithms and the ODE-Stability Method	282
8.6	Two-Time-Scale Problems	286
8.6.1	The Constrained Algorithm	286
8.6.2	Unconstrained Algorithms: Stability	288

9 Applications: Proofs of Convergence	291
9.0 Outline of Chapter	291
9.1 Introduction	292
9.1.1 General Comments	292
9.1.2 A Simple Illustrative SDE Example	294
9.2 A SDE Example	298
9.3 A Discrete Example: A GI/G/1 Queue	302
9.4 Signal Processing Problems	306
9.5 Proportional Fair Sharing	312
10 Rate of Convergence	315
10.0 Outline of Chapter	315
10.1 Exogenous Noise: Constant Step Size	317
10.1.1 Martingale Difference Noise	317
10.1.2 Correlated Noise	326
10.2 Exogenous Noise: Decreasing Step Size	328
10.2.1 Martingale Difference Noise	329
10.2.2 Optimal Step Size Sequence	331
10.2.3 Correlated Noise	332
10.3 Kiefer–Wolfowitz Algorithm	333
10.3.1 Martingale Difference Noise	333
10.3.2 Correlated Noise	337
10.4 Tightness: W.P.1 Convergence	340
10.4.1 Martingale Difference Noise: Robbins–Monro Algorithm	340
10.4.2 Correlated Noise	344
10.4.3 Kiefer–Wolfowitz Algorithm	346
10.5 Tightness: Weak Convergence	347
10.5.1 Unconstrained Algorithm	347
10.5.2 Local Methods for Proving Tightness	351
10.6 Weak Convergence to a Wiener Process	353
10.7 Random Directions	358
10.7.1 Comparison of Algorithms	361
10.8 State-Dependent Noise	365
10.9 Limit Point on the Boundary	369
11 Averaging of the Iterates	373
11.0 Outline of Chapter	373
11.1 Minimal Window of Averaging	376
11.1.1 Robbins–Monro Algorithm: Decreasing Step Size	376
11.1.2 Constant Step Size	379
11.1.3 Averaging with Feedback and Constant Step Size	380
11.1.4 Kiefer–Wolfowitz Algorithm	381

11.2	A Two-Time-Scale Interpretation	382
11.3	Maximal Window of Averaging	383
11.4	The Parameter Identification Problem	391
12	Distributed/Decentralized and Asynchronous	
	Algorithms	395
12.0	Outline of Chapter	395
12.1	Examples	397
12.1.1	Introductory Comments	397
12.1.2	Pipelined Computations	398
12.1.3	A Distributed and Decentralized Network Model	400
12.1.4	Multiaccess Communications	402
12.2	Real-Time Scale: Introduction	403
12.3	The Basic Algorithms	408
12.3.1	Constant Step Size: Introduction	408
12.3.2	Martingale Difference Noise	410
12.3.3	Correlated Noise	417
12.3.4	Analysis for $\epsilon \rightarrow 0$ and $T \rightarrow \infty$	419
12.4	Decreasing Step Size	421
12.5	State-Dependent Noise	428
12.6	Rate of Convergence	430
12.7	Stability and Tightness of the Normalized Iterates	436
12.7.1	Unconstrained Algorithms	436
12.8	Convergence for Q -Learning: Discounted Cost	439
