Nonstandard Analysis, Axiomatically

Springer
# Table of Contents

**Introduction** ................................................................. 1  
Basic notation ............................................................ 10  

1 **Getting started** .......................................................... 11  
  1.1 The axiomatical system of Hrbacek set theory .................. 12  
  1.1a The universe of HST ............................................... 12  
  1.1b Axioms for the external universe ............................... 14  
  1.1c Axioms for standard and internal sets ......................... 14  
  1.1d Well-founded sets ............................................... 16  
  1.1e The $\epsilon$-structure of internal and well-founded sets 17  
  1.1f Axioms for sets of standard size ............................. 19  
  1.1g Putting it all together ......................................... 20  
  1.1h Zermelo–Fraenkel theory ZFC .................................. 20  
  1.2 Basic elements of the nonstandard universe ................. 22  
  1.2a How to define fundamental set theoretic notions in HST 22  
  1.2b Closure properties and absoluteness .......................... 22  
  1.2c Ordinals and cardinals ......................................... 24  
  1.2d Natural numbers, finite and *-finite sets ................... 25  
  1.2e Hereditarily finite sets ....................................... 28  
  1.3 Sets of standard size ............................................. 29  
  1.3a Cardinalities of sets of standard size ....................... 29  
  1.3b Saturation and the Hrbacek paradox ........................... 30  
  1.3c The principle of Extension .................................... 32  
  1.4 The class $\Delta_2^*$ ............................................. 34  
  1.4a Basic properties of $\Delta_2^*$ ............................... 34  
  1.4b Cuts (initial segments) of *-ordinals ....................... 35  
  1.4c Monads and transversals ...................................... 37  
  1.4d On non-well-founded cardinalities ............................ 38  
  1.4e Small and large sets .......................................... 40  
  1.5 Some finer points ................................................. 42  
  1.5a Von Neumann hierarchy and Reflection in ZFC ............... 42  
  1.5b Von Neumann hierarchy over internal sets in HST .......... 44  
  1.5c Classes and structures ....................................... 45  
  1.5d Interpretations .................................................. 47  
  1.5e Models ............................................................ 48  
  1.5f Simulation of models of ZFC ................................. 49  
  1.5g Asterisk is an elementary embedding ........................ 50  

*Historical and other notes to Chapter 1* .......................... 52

3.6 Second edition of IST ........................................ 124
  3.6a Standard and nonstandard theories of Nelson’s system .... 124
  3.6b The background nonstandard universe ...................... 125
  3.6c Three “myths” of IST .................................... 127

Historical and other notes to Chapter 3 .................. 129

4 Metamathematics of internal theories .................. 131
  4.1 Outline of metamathematical properties .................. 132
    4.1a Nonstandard extensions of structures ................ 132
    4.1b Nonstandard extensions of theories .................. 133
    4.1c Comments ........................................... 134
    4.1d Metamathematics of internal theories: the main results 136
  4.2 Ultrapowers and saturated extensions .................. 138
    4.2a Saturated structures and nonstandard set theories .... 138
    4.2b Quotient power extensions .......................... 140
    4.2c Adequate and good ultrafilters and ultrapowers ....... 142
    4.2d Elementary chains of structures ..................... 144
  4.3 Metamathematics of BST ................................ 146
    4.3a Warmup: several examples ............................ 146
    4.3b Infinite Fubini products of adequate ultrafilters ...... 148
    4.3c Standard core interpretation of BST in ZFC .......... 150
    4.3d Saturated standard core interpretation ............... 152
  4.4 The conservativity and equiconsistency of IST .......... 154
    4.4a Good extensions of von Neumann sets in ZFC universe .. 154
    4.4b Iterated adequate extensions of von Neumann sets .... 155
    4.4c Iterated adequate extensions in the $\mathcal{V}$-version of ZFC 156
    4.4d Long iterated quotient power chains .................. 156
    4.4e Conservativity of IST by inner models ............... 157
  4.5 Non-reducibility of IST ................................ 159
    4.5a The minimality axiom ................................ 159
    4.5b The source of counterexamples ........................ 160
    4.5c The ultrafilter ..................................... 161
    4.5d “Definable” adequate quotient power ................... 163
    4.5e Corollaries and remarks ................................ 164
  4.6 Interpretability of IST in a standard theory .......... 166
    4.6a Standard theory with a global choice and a truth predicate 166
    4.6b Formally definable classes .......................... 168
    4.6c A nonstandard theory extending IST ................... 169
    4.6d The ultrafilter ..................................... 170
    4.6e The interpretation .................................. 173
    4.6f Extendibility of standard models ..................... 175

Historical and other notes to Chapter 4 .................. 176

5 Definable external sets and metamathematics of HST ...... 179
  5.1 Introduction to metamathematics of HST ................. 180
    5.1a Internal core embeddings and interpretability .......... 180
    5.1b Metamathematics of HST: an overview .................. 181
  5.2 From internal to elementary external sets .............. 184
    5.2a Interpretation of EEST in BST ....................... 184
XIV Table of Contents

5.2b Elementary external sets in external theories ............... 186
5.2c Some basic theorems of EEST ............................... 188
5.2d Standard size, natural numbers, finiteness in EEST ....... 189
5.3 Assembling of external sets in HST .......................... 191
5.3a Well-founded trees ........................................ 191
5.3b Coding of the assembling construction .................... 192
5.3c Examples of codes ....................................... 193
5.3d Regular codes ............................................. 195
5.4 From elementary external to all external sets ............... 196
5.4a The domain of the interpretation ............................ 196
5.4b Basic relations between codes .............................. 198
5.4c The structure of basic relations ............................ 200
5.4d The interpretation and the embedding ..................... 202
5.4e Verification of the HST axioms ............................. 204
5.4f Superposition of interpretations .......................... 207
5.4g The problem of external sets revisited ..................... 209
5.5 The class L[B] : sets constructible from internal sets ..... 211
5.5a Sets constructible from internal sets ...................... 211
5.5b Proof of the theorem on I-constructible sets .......... 212
5.5c The axiom of I-constructibility ........................... 214
5.5d Transfinite constructions in L[B] .......................... 215

Historical and other notes to Chapter 5 ......................... 217

6 Partially saturated universes and the Power Set problem .... 219
6.1 Internal subuniverses .................................... 220
6.1a Some basic definitions and results ........................ 220
6.1b Relative standardness ................................... 221
6.1c Simple relative standardness ................................ 222
6.1d Gordon classes .......................................... 224
6.1e Associated structures .................................... 225
6.1f More on internal subuniverses ............................ 228
6.1g Appendix: Kunen's theorem ................................ 229
6.2 Partially saturated internal universes ....................... 230
6.2a Partially saturated classes $\mathcal{I}_\alpha$ .................. 230
6.2b Good internal subuniverses ................................ 232
6.2c Internal universes over complete sets .................... 233
6.3 External universes ......................................... 237
6.3a External universes and internal core extensions ........... 237
6.3b Von Neumann construction over non-transitive classes .... 239
6.3c Absoluteness for external subuniverses .................... 240
6.4 Partially saturated external universes ...................... 241
6.4a Partially saturated external theories ...................... 241
6.4b Extensions of thin classes ................................ 243
6.4c Constructible extensions .................................. 244
6.4d Constructible extensions of self-definable classes ........ 246
6.4e The classes $\mathcal{L}[\mathcal{I}_\alpha]$ .......................... 248
6.4f External universes over complete sets ..................... 249
6.4g Collapse onto a transitive class .......................... 251
6.4h Outline of applications: subuniverses satisfying Power Set ... 252
### 7 Forcing extensions of the nonstandard universe

7.1 Generic extensions of models of HST

- 7.1a Ground model
- 7.1b Regular extensions
- 7.1c Forcing notions and names
- 7.1d Adding a set
- 7.1e Forcing relation
- 7.1f Generic extensions and the truth lemma
- 7.1g The extension models HST

7.2 Applications: collapse maps and isomorphisms

- 7.2a Making two internal sets equinumerous
- 7.2b Internal preserving bijections
- 7.2c Making elementarily equivalent structures isomorphic
- 7.2d The forcing notion
- 7.2e Key lemma
- 7.2f Generic isomorphisms

7.3 Consistency of the isomorphism property

- 7.3a The product forcing notion
- 7.3b Externalization
- 7.3c Restricted forcing relations
- 7.3d Automorphisms and the restriction property
- 7.3e The product generic extension

### 8 Other nonstandard theories

8.1 Nonstandard set theory of Kawai

- 8.1a The axioms of Kawai's theory
- 8.1b Metamathematical properties
- 8.1c Special model axiom

8.2 "Nonstandard set theory" of Hrbáček

- 8.2a Axioms
- 8.2b Additional axioms of Collection
- 8.2c Conservativity and consistency
- 8.2d Remarks and exercises

8.3 Non-well-founded set theories

- 8.3a Boffa's non-well-founded set theory
- 8.3b Extensions of proper classes
- 8.3c Applications to nonstandard analysis
- 8.3d Alpha theory
- 8.3e Interpretation of Alpha theory in ZFBC

8.4 Miscellanea: some other theories

- 8.4a A theory with "definable" Saturation
- 8.4b Stratified nonstandard set theories
- 8.4c Nonstandard class theories
