Azita Soleymani

ADVANCED TOPICS IN DEFORMATION AND FLOW OF DENSE GAS-PARTICLE MIXTURES

Thesis for the degree of Doctoral of Science (Technology) to be presented with due permission for public examination and criticism in the Auditorium 7339 at Lappeenranta University of Technology, Lappeenranta, Finland on the 25th Nov., 2004, at noon.
Table of contents

Abstract .................................................................................................................. 3
Acknowledgments ..................................................................................................... 4
Table of contents ..................................................................................................... 5
List of publications .................................................................................................. 6
Notations .................................................................................................................. 7

1. Introduction ........................................................................................................ 11
   1.1 General overview ......................................................................................... 11
   1.2 Objectives of this study .............................................................................. 16

2. Preliminary investigations .................................................................................. 17
   2.1 Binary collisions ......................................................................................... 17
      2.1.1 Binary collision of elastic solids ......................................................... 17
      2.1.2 Numerical simulation of binary collisions ......................................... 21
         2.1.2.1 Elastic collisions ........................................................................... 21
      2.1.3 Impact of glass balls ........................................................................... 29
         2.1.3.1 Standard Newton’s Cradle ............................................................ 29
      2.1.4 Impact of viscoelastic solids ................................................................. 32
      2.1.5 Simplified models for collision of viscoelastic bodies ......................... 38
   2.2 Collective processes in gas-particle flows ................................................. 39
      2.2.1 Fluid flow through a stationary irregular array of particles ............... 39
         2.2.1.1 Large Eddy Simulation (LES) ...................................................... 40
         2.2.1.2 Numerical results ....................................................................... 43
      2.2.2 Fluid flow in the presence of moving bodies ...................................... 50
   2.3 Analysis ......................................................................................................... 60
      2.3.1 Rate-independent quasi-static regime ............................................... 61
      2.3.2 Transitional regime ............................................................................ 63
         2.3.2.1 Viscous-like behavior ................................................................. 66
         2.3.2.2 Fluctuation energy ..................................................................... 74
      2.3.3 Continuous phase ............................................................................... 76

3. Computer simulations of dense gas-particle mixtures .................................... 79
   3.1 Shaking bucket of glass beads ................................................................. 79
      3.1.1 Numerical Simulation of the shaking bucket of glass beads ............. 81
   3.2 Vertical spinning bucket of sand ............................................................... 84
      3.2.1 Molecular Dynamic simulation of the vertical spinning bucket of sand 85
      3.2.2 Numerical simulation of the vertical spinning bucket of sand .......... 89
   3.3 Shock waves in granular assembly ............................................................. 93
      3.3.1 Molecular Dynamic simulations of the granular flows pass a wedge 96
      3.3.2 Numerical simulations of the granular flows pass a wedge .......... 98
List of publications which are counted as part of the thesis work:

**Appendix 1**

**Appendix 2**

**Appendix 3**

**Appendix 4**

**List of publications**

This thesis is based on the papers listed in the appendices. Some of the results that are introduced have been published in associated publications. The following publications are not included in this thesis.
