Handbook of
Analysis and Its Foundations

Eric Schechter
Vanderbilt University
Contents

Preface
• About the Choice of Topics, xiii • Existence, Examples, and Intangibles, xv
• Abstract versus Concrete, xviii • Order of Topics, xix • How to Use This Book, xx • Acknowledgments, xxi • To Contact Me, xxii

A SETS AND ORDERINGS 1

1 Sets
• Mathematical Language and Informal Logic, 3 • Basic Notations for Sets, 11
• Ways to Combine Sets, 15 • Functions and Products of Sets, 19 • ZF Set Theory, 25

2 Functions
• Some Special Functions, 34 • Distances, 39 • Cardinality, 43 • Induction and Recursion on the Integers, 47

3 Relations and Orderings
• Relations, 50 • Preordered Sets, 52 • More about Equivalences, 54 • More about Posets, 56 • Max, Sup, and Other Special Elements, 59 • Chains, 62 • Van Maaren’s Geometry-Free Sperner Lemma, 64 • Well Ordered Sets, 72

4 More about Sups and Infs
• Moore Collections and Moore Closures, 78 • Some Special Types of Moore Closures, 83 • Lattices and Completeness, 87 • More about Lattices, 88 • More about Complete Lattices, 91 • Order Completions, 92 • Sups and Infs in Metric Spaces, 97

5 Filters, Topologies, and Other Sets of Sets
• Filters and Ideals, 100 • Topologies, 106 • Algebras and Sigma-Algebras, 115 • Uniformities, 118 • Images and Preimages of Sets of Sets, 122 • Transitive Sets and Ordinals, 122 • The Class of Ordinals, 127

| 131 | 6 Constructivism and Choice  
- Examples of Nonconstructive Mathematics, 132  
- Further Comments on Constructivism, 135  
- The Meaning of Choice, 139  
- Variants and Consequences of Choice, 141  
- Some Equivalents of Choice, 144  
- Countable Choice, 148  
- Dependent Choice, 149  
- The Ultrafilter Principle, 150 |
| 155 | 7 Nets and Convergences  
- Nets, 157  
- Subnets, 161  
- Universal Nets, 165  
- More about Subsequences, 167  
- Convergence Spaces, 168  
- Convergence in Posets, 171  
- Convergence in Complete Lattices, 174 |
| 177 | B ALGEBRA |
| 179 | 8 Elementary Algebraic Systems  
- Monoids, 179  
- Groups, 181  
- Sums and Quotients of Groups, 184  
- Rings and Fields, 187  
- Matrices, 192  
- Ordered Groups, 194  
- Lattice Groups, 197  
- Universal Algebras, 202  
- Examples of Equational Varieties, 205 |
| 208 | 9 Concrete Categories  
- Definitions and Axioms, 210  
- Examples of Categories, 212  
- Initial Structures and Other Categorical Constructions, 217  
- Varieties with Ideals, 221  
- Functors, 227  
- The Reduced Power Functor, 229  
- Exponential (Dual) Functors, 238 |
| 242 | 10 The Real Numbers  
- Dedekind Completions of Ordered Groups, 242  
- Ordered Fields and the Reals, 245  
- The Hyperreal Numbers, 250  
- Quadratic Extensions and the Complex Numbers, 254  
- Absolute Values, 259  
- Convergence of Sequences and Series, 263 |
| 272 | 11 Linearity  
- Linear Spaces and Linear Subspaces, 272  
- Linear Maps, 277  
- Linear Dependence, 280  
- Further Results in Finite Dimensions, 282  
- Choice and Vector Bases, 285  
- Dimension of the Linear Dual (Optional), 287  
- Preview of Measure and Integration, 288  
- Ordered Vector Spaces, 292  
- Positive Operators, 296  
- Orthogonality in Riesz Spaces (Optional), 300 |
| 302 | 12 Convexity  
- Convex Sets, 302  
- Combinatorial Convexity in Finite Dimensions (Optional), 307  
- Convex Functions, 308  
- Norms, Balanced Functionals, and Other Special Functions, 313  
- Minkowski Functionals, 315  
- Hahn-Banach Theorems, 317  
- Convex Operators, 319 |
Contents

13 Boolean Algebras 326
- Boolean Lattices, 326
- Boolean Homomorphisms and Subalgebras, 329
- Boolean Rings, 334
- Boolean Equivalents of UF, 338
- Heyting Algebras, 340

14 Logic and Intangibles 344
- Some Informal Examples of Models, 345
- Languages and Truths, 350
- Ingredients of First-Order Language, 354
- Assumptions in First-Order Logic, 362
- Some Syntactic Results (Propositional Logic), 366
- Some Syntactic Results (Predicate Logic), 372
- The Semantic View, 377
- Soundness, Completeness, and Compactness, 385
- Nonstandard Analysis, 394
- Summary of Some Consistency Results, 399
- Quasiconstructivism and Intangibles, 403

C TOPOLOGY AND UNIFORMITY 407

15 Topological Spaces 409
- Pretopological Spaces, 409
- Topological Spaces and Their Convergences, 411
- More about Topological Closures, 415
- Continuity, 417
- More about Initial and Product Topologies, 421
- Quotient Topologies, 425
- Neighborhood Bases and Topology Bases, 426
- Cluster Points, 430
- More about Intervals, 431

16 Separation and Regularity Axioms 435
- Kolmogorov (T-Zero) Topologies and Quotients, 436
- Symmetric and Fréchet (T-One) Topologies, 438
- Prerregular and Hausdorff (T-Two) Topologies, 439
- Regular and T-Three Topologies, 441
- Completely Regular and Tychonov (T-Three and a Half) Topologies, 442
- Partitions of Unity, 444
- Normal Topologies, 446
- Paracompactness, 448
- Hereditary and Productive Properties, 451

17 Compactness 453
- Characterizations in Terms of Convergences, 453
- Basic Properties of Compactness, 456
- Regularity and Compactness, 458
- Tychonov's Theorem, 461
- Compactness and Choice (Optional), 461
- Compactness, Maxima, and Sequences, 466
- Pathological Examples: Ordinal Spaces (Optional), 472
- Boolean Spaces, 473
- Eberlein-Smulian Theorem, 477

18 Uniform Spaces 481
- Lipschitz Mappings, 482
- Uniform Continuity, 484
- Pseudometrizable Gauges, 487
- Compactness and Uniformity, 490
- Uniform Convergence, 491
- Equicontinuity, 493
19 Metric and Uniform Completeness 499
- Cauchy Filters, Nets, and Sequences, 499
- Complete Metrics and Uniformities, 502
- Total Boundedness and Precompactness, 505
- Bounded Variation, 508
- Cauchy Continuity, 511
- Cauchy Spaces (Optional), 512
- Completions, 513
- Banach’s Fixed Point Theorem, 516
- Meyers’s Converse (Optional), 520
- Bessaga’s Converse and Brönsted’s Principle (Optional), 523

20 Baire Theory 530
- G-Delta Sets, 530
- Meager Sets, 531
- Generic Continuity Theorems, 533
- Topological Completeness, 536
- Baire Spaces and the Baire Category Theorem, 537
- Almost Open Sets, 539
- Relativization, 540
- Almost Homeomorphisms, 541
- Tail Sets, 543
- Baire Sets (Optional), 545

21 Positive Measure and Integration 547
- Measurable Functions, 547
- Joint Measurability, 549
- Positive Measures and Charges, 552
- Null Sets, 554
- Lebesgue Measure, 556
- Some Countability Arguments, 559
- Convergence in Measure, 561
- Integration of Positive Functions, 565
- Essential Suprema, 569

D TOPOLOGICAL VECTOR SPACES 573

22 Norms 575
- (G-)(Semi)Norms, 575
- Basic Examples, 578
- Sup Norms, 581
- Convergent Series, 585
- Bochner-Lebesgue Spaces, 589
- Strict Convexity and Uniform Convexity, 596
- Hilbert Spaces, 601

23 Normed Operators 607
- Norms of Operators, 607
- Equicontinuity and Joint Continuity, 612
- The Bochner Integral, 615
- Hahn-Banach Theorems in Normed Spaces, 617
- A Few Consequences of HB, 621
- Duality and Separability, 622
- Unconditionally Convergent Series, 624
- Neumann Series and Spectral Radius (Optional), 627

24 Generalized Riemann Integrals 629
- Definitions of the Integrals, 629
- Basic Properties of Gauge Integrals, 635
- Additivity over Partitions, 638
- Integrals of Continuous Functions, 642
- Monotone Convergence Theorem, 645
- Absolute Integrability, 647
- Henstock and Lebesgue Integrals, 649
- More about Lebesgue Measure, 656
- More about Riemann Integrals (Optional), 658
25 Fréchet Derivatives
- Definitions and Basic Properties, 661
- Partial Derivatives, 665
- Strong Derivatives, 669
- Derivatives of Integrals, 674
- Integrals of Derivatives, 675
- Some Applications of the Second Fundamental Theorem of Calculus, 677
- Path Integrals and Analytic Functions (Optional), 683

26 Metrization of Groups and Vector Spaces
- F-Seminorms, 689
- TAG’s and TVS’s, 697
- Arithmetic in TAG’s and TVS’s, 700
- Neighborhoods of Zero, 702
- Characterizations in Terms of Gauges, 705
- Uniform Structure of TAG’s, 708
- Pontryagin Duality and Haar Measure (Optional; Proofs Omitted), 710
- Ordered Topological Vector Spaces, 714

27 Barrels and Other Features of TVS’s
- Bounded Subsets of TVS’s, 721
- Bounded Sets in Ordered TVS’s, 726
- Dimension in TVS’s, 728
- Fixed Point Theorems of Brouwer, Schauder, and Tychonov, 730
- Barrels and Ultrabarrels, 732
- Proofs of Barrel Theorems, 736
- Inductive Topologies and LF Spaces, 744
- The Dream Universe of Garnir and Wright, 748

28 Duality and Weak Compactness
- Hahn-Banach Theorems in TVS’s, 752
- Bilinear Pairings, 754
- Weak Topologies, 758
- Weak Topologies of Normed Spaces, 761
- Polar Arithmetic and Equicontinuous Sets, 764
- Duals of Product Spaces, 769
- Characterizations of Weak Compactness, 771
- Some Consequences in Banach Spaces, 777
- More about Uniform Convexity, 780
- Duals of the Lebesgue Spaces, 782

29 Vector Measures
- Basic Properties, 785
- The Variation of a Charge, 787
- Indefinite Bochner Integrals and Radon-Nikodym Derivatives, 790
- Conditional Expectations and Martingales, 792
- Existence of Radon-Nikodym Derivatives, 796
- Semivariation and Bartle Integrals, 802
- Measures on Intervals, 806
- Pincus’s Pathology (Optional), 810

30 Initial Value Problems
- Elementary Pathological Examples, 815
- Carathéodory Solutions, 816
- Lipschitz Conditions, 819
- Generic Solvability, 822
- Compactness Conditions, 822
- Isotonicity Conditions, 824
- Generalized Solutions, 826
- Semigroups and Dissipative Operators, 828
