

# **Understanding Aircraft Structures**

**John Cutler**

Fourth Edition  
revised by

**Jeremy Liber**

**Blackwell  
Publishing**

# Contents

<i>Preface</i>		ix
Chapter 1	<i>Introduction</i>	1
Chapter 2	<i>History</i>	3
	2.1 Outline	3
	2.2 Wire-braced structures	4
	2.3 Semi-monocoque structures	9
	2.4 Sandwich structures	14
	2.5 Review of the key points	15
Chapter 3	<i>Parts of the Aircraft</i>	29
	3.1 Terms connected with flight	29
	3.2 Terms connected with control	31
	3.3 Terms connected with high-lift devices	32
	3.4 Terms associated with the shape and dimensions of the aircraft	32
	3.5 Review of the key points	37
Chapter 4	<i>Loads on the Aircraft</i>	38
	4.1 General flight forces	38
	4.2 Acceleration loads	44
	4.3 Further aerodynamic loads	48
	4.4 Other loads	50
	4.5 Further load factors	51
	4.6 Loads acting on the whole aircraft	53
	4.7 Review of the key points	55
	4.8 References	56
Chapter 5	<i>The Form of Structures</i>	57
	5.1 Structure relative to aircraft design	57
	5.2 Historic form of structure	57
	5.3 General form of structure	59
	5.4 The basic load systems in structures	59
	5.5 The forms of stress in materials	63
	5.6 Bending and torsion	72
	5.7 Compression	85

	5.8	The whole structure	87
	5.9	Review of the key points	87
	5.10	References	88
Chapter 6		<i>Materials</i>	89
	6.1	Choice of materials	89
	6.2	Material properties	92
	6.3	Smart structures (and materials)	101
	6.4	Cost as a property of a material	103
	6.5	Heat treatment	105
	6.6	Reference number for materials	106
	6.7	Review of the key points	109
	6.8	References	110
Chapter 7		<i>Processes</i>	112
	7.1	Introduction	112
	7.2	Manufacturing	112
	7.3	Joining	119
	7.4	Review of the key points	123
	7.5	References	123
Chapter 8		<i>Corrosion and Protective Treatments</i>	124
	8.1	Nature of corrosion	124
	8.2	Causes of corrosion	126
	8.3	Protection against corrosion	128
	8.4	Review of the key points	132
	8.5	Reference	132
Chapter 9		<i>Detail Design</i>	133
	9.1	Sheet-metal components	133
	9.2	Machined components and large forgings	136
	9.3	Notching and stress raisers	139
	9.4	Rivets and bolts	144
	9.5	Jogging	152
	9.6	Clips or cleats	154
	9.7	Stringer/frame intersections	155
	9.8	Lugs	156
	9.9	The 'stiff path'	157
	9.10	Review of the key points	157
Chapter 10		<i>Composite Materials in Aircraft Structures</i>	159
	10.1	What are composites?	159
	10.2	The strength of composite materials	161
	10.3	Types of structures	162
	10.4	Joining composites	164
	10.5	Fibres	167
	10.6	Resins	169
	10.7	Working safely with composites	171
	10.8	Review of the key points	172

Chapter 11	<i>Quality and Airworthiness</i>	173
	11.1 Quality assurance and quality control	173
	11.2 Control	174
	11.3 Procedures and systems	175
	11.4 Further notes on quality control functions	177
	11.5 Airworthiness engineering	179
	11.6 Continued airworthiness	180
	11.7 Review of the key points	181
	11.8 References	181
Chapter 12	<i>Stressing</i>	182
	12.1 Introduction	182
	12.2 The stressman's work	183
	12.3 Stressing methods	187
	12.4 Stress reports	190
	12.5 Review of the key points	193
	12.6 References	194
Chapter 13	<i>Presentation of Modifications and Repairs</i>	195
	13.1 Definitions	195
	13.2 The essential paperwork associated with modifications	197
	13.3 Review of the key points	201
	13.4 Conclusion	201
	13.5 References	202
	<i>Appendices</i>	203
	<i>Index</i>	209
