

Wojbor A. Woyczyński

A First Course in Statistics for Signal Analysis

Birkhäuser
Boston • Basel • Berlin

Contents

Introduction	ix
Notation	xi
1 Description of Signals	1
1.1 Types of random signals	1
1.2 Time domain and frequency domain descriptions	8
1.3 Characteristics of signals	12
1.4 Problems and exercises	13
2 Spectral Representation of Deterministic Signals:	
Fourier Series and Transforms	17
2.1 Complex Fourier series for periodic signals	17
2.2 Approximation of periodic signals by finite Fourier sums	26
2.3 Aperiodic signals and Fourier transforms	31
2.4 Basic properties of the Fourier transform	35
2.5 Fourier transforms of some nonintegrable signals; Dirac delta impulse	37
2.6 Discrete and fast Fourier transforms	42
2.7 Problems and exercises	44
3 Random Quantities and Random Vectors	47
3.1 Discrete, continuous, and singular random quantities	48
3.2 Expectations and moments of random quantities	62
3.3 Random vectors, conditional probabilities, statistical independence, and correlations	67
3.4 The least-squares fit, regression line	77
3.5 The law of large numbers and the stability of fluctuations law	80
3.6 Estimators of parameters and their accuracy; confidence intervals	82
3.7 Problems, exercises, and tables	86

4	Stationary Signals	93
4.1	Stationarity, autocovariance, and autocorrelation.....	93
4.2	Estimating the mean and the autocorrelation function, ergodic signals	105
4.3	Problems and exercises	109
5	Power Spectra of Stationary Signals	113
5.1	Mean power of a stationary signal.....	113
5.2	Power spectrum and autocorrelation function.....	114
5.3	Power spectra of interpolated digital signals	121
5.4	Problems and exercises	124
6	Transmission of Stationary Signals through Linear Systems .	127
6.1	The time domain analysis	128
6.2	Frequency domain analysis and system bandwidth	136
6.3	Digital signal, discrete-time sampling	140
6.4	Problems and exercises	144
7	Optimization of Signal-to-Noise Ratio in Linear Systems	147
7.1	Fixed filter structure, known input signal	147
7.2	Filter structure matched to signal	151
7.3	The Wiener filter	154
7.4	Problems and exercises	156
8	Gaussian Signals, Correlation Matrices, and Sample Path Properties	159
8.1	Linear transformations of random vectors	160
8.2	Gaussian random vectors	162
8.3	Gaussian stationary signals	165
8.4	Sample path properties of general and Gaussian stationary signals.....	167
8.5	Problems and exercises	173
9	Discrete Signals and Their Computer Simulations	175
9.1	Autocorrelation as a positive definite function	175
9.2	Cumulative power spectrum of discrete-time stationary signal	176
9.3	Stochastic integration with respect to signals with uncorrelated increments	179
9.4	Spectral representation of stationary signals	184
9.5	Computer algorithms	188
9.6	Problems and exercises	196
	Bibliographical Comments	197
	Index	201
