IABSE SYMPOSIUM
WEIMAR 2007

Improving Infrastructure Worldwide

REPORT RAPPORT BERICHT

Organized by
German Group of IABSE
and
the Bauhaus-Universität Weimar
# Table of Contents

## Keynotes

"German unity"—a success story on the development of infrastructure in the newly-formed German states
Engelbert LÜTKE-DALDRUP—Joachim NAUMANN, Germany .......................... 2

Great demand and great challenge—Chinese major bridge projects under construction for improving traffic infrastructure nationwide
Yao Jun GE—H. F. Xiang, China ................................................................. 6

### Evolution of Bridges

Man-Chung TANG, USA ........................................................................... 10

Retrofitting of fatigue damaged steel bridge structures
Chitoshi MIKI—T. KONISHI, Japan .......................................................... 14

Life cycle management of infrastructures: towards an integrated approach of design, execution and maintenance
Aad VAN DER HORST, The Netherlands .................................................. 20

### Design for movements in bridges

Ove SØRENSEN—M. L. BLOOMSTINE, N. BITSCH, P. LINNEBERG, Denmark ... 24

Adding confidence and reducing risk—the role of independent design checking in major projects
Ian FIRTH, UK ....................................................................................... 28

## SESSION B

### B1 Infrastructure as a Unifying Concept

The Oeresund and the Great Belt Links. Experience and Developments
Leif J. VINCENTSEN—P. LUNDHUS, Denmark ........................................... 34

Technical Challenges and Solutions in the Management of the Designs in a Motorway Project
George KONSTANTINIDIS—I. PAPAIOGA, I. RENTZEPERIS, E. SARRIDOU, Greece ................................................................. 36

The National Motorway Construction Programme in the Republic of Slovenia
Ksenija MARC, Slovenia ........................................................................... 38

Congestion taxes: a way of financing new infrastructure
Lahja RYDBERG FORSSBECK—M. KARLSSON, B. HÖÖK, Sweden ........... 40

Unified planning, design and implementation of infrastructure
B. C. ROY—A. CHAKRABARTI, India ....................................................... 42
Public Private Partnership Approach to an Integrated Life-Cycle Management of Highway Infrastructure in Hong Kong
Kevin SO—M. CHEUNG, Hong Kong ........................................... 44

B2 Traffic Structures - Built for a Long and Efficient Life

A Pedestrian Arch Bridge with a Span of 230 m
Uwe HÄBERLE—W. STROBL ....................................................... 48

La Vicaria Arch over La Fuentesanta Reservoir
Santiago PEREZ-FADON—J. E. HERRERO, L. MARTIN-TERESO,
M. SANCHEZ*, Spain, Ireland* ............................................ 50

Two Steel Bridges for the High Speed Railway line Madrid-Barcelona-French Border
Juan A. SOBRINO, Spain ............................................................ 52

Stonecutters Bridge—Latest Construction Challenges
Steve KITE—I. HUBERT, C. VENETZ, Hong Kong ....................... 54

Cable-stayed Bridges across the Panama Canal and the Orinoco
Karl HUMPF—R. SAUL, Germany ............................................. 56

Design of the Golden Ears Bridge
Don BERGMAN—D. RADOJEVIC, H. IBRAHIM, Canada .................. 58

B3 Traffic Structures—Built for a Long and Efficient Life

Seismic Design of Elevated Traffic Systems
Martin EMPELMANN, Germany ............................................... 62

Earthquake resistance and cost-effectiveness of multi-span bridges
Ioannis A. TEGOS—S. A. MITOULIS, E. GAVAISE, K. STYLIANIDIS,
M. TSITOTAS, Greece .......................................................... 64

Application of sleeve joints between steel beams and CFT columns to railway structures
Teruhiko YODA—M. YAMADA, A. HAYASHI, S. NOZAWA, Japan ....... 66

Use of FRP Reinforcement constructing diaphragm pit walls
Ludger SPEIER—G. KARPA, Germany ........................................ 68

Tunnels Supported on Bearing Blocks
Silvino POMPEU-SANTOS, Portugal ....................................... 70

Ship Collision Analysis of Pile-Supported Structure for Protection System
Seong-Lo LEE—Y.-G. BAE, H. KIM, Korea .................................. 72

B4 Important Design Considerations—Design for Durability and Sustainability

Lifetime Performance of GFRP Pultruded Profiles for Structural Applications
João R. CORREIA—F. BRANCO, J. FERREIRA, S. C. FONSECA,
J. P. C. RODRIGUES, Portugal ............................................... 76
Structural behaviour of GFRP beams under high temperature condition
Janine VIEIRA — E. BATISTA, Brazil ........................................... 78

Design of an innovative composite road bridge combining reinforced concrete with UHPFRC
Eugen BRÜHWILER* — E. PELKE, E. FEHLING, K. BUNJE, Switzerland*, Germany . 80

Separation of structural and practical functionalities for wearing courses on steel box girders
Hans DE BACKER — A. OUTTIER, P. VAN BOGAERT, Belgium ...................... 82

Use of Duplex Stainless Steel Plate for Durable Bridge Construction
Graham GEDGE, UK ................................................................. 84

Simulation of Low Cycle Fatigue in Integral Abutment Piles
Robert HÄLLMARK — P. COLLIN, H. PETURSSON, B. JOHANSSON, Sweden .... 86

SESSION C
C1 Infrastructure as a Unifying Concept

The Development of Cable-Stayed Bridges since John Röbling
Holger SVENSSON, Germany ..................................................... 90

Traffic Structures in East Germany — A Historical Review
Bernhard WELLER — M. TASCHE, Germany .................................. 92

Bridging the Border
Fritz WENZEL, Germany .......................................................... 94

Railway tunnel between sicily and Tunisie
Pietro LA MENDOLA — M. MINISCHETTI, A. TATI, Italy ....................... 96

Trau Kod Dam Near Siem Reap, Cambodia: Sustainable Infrastructure in a Developing Community
Ryan WOODWARD, USA ........................................................ 98

Selected engineering structures on the reactivated suburban railway track near Stuttgart
Christoph KESSLER-KRAMER, Germany ......................................... 100

C2 Traffic Structures — Built for a Long and Efficient Life

Amsterdam Bijlmer arena station
Hans TEN VOORDE — H. VAN WEELDEN, H. BEERTSEN, The Netherlands .... 104

Beijing Airport Terminal 3
Holger FALTER* — M. MANNING, R. HENLEY, Ireland* .......................... 106

Planning and construction of the new Lauenburg lock
Andreas DOHMS, Germany ....................................................... 108

Vertical Microtunnelling technology developed for retaining wall Amsterdam
Carlos BOSMA — B. OBLADEN, The Netherlands .............................. 110
The effect of wave passage on immersed tube tunnels—Busan Geoje Fixed Link in South Korea

Innovative Technique for the Construction of Luntou Tunnel—Casting IMT on Submersible Barge
W.W. YANG—J. Y. C. LO, F. H. Y. NG, W. YANG, G. LUO, China ....................... 114

C3 Important Design Considerations—Design for Durability and Sustainability

Fatigue sensibility of R/C secondary elements of bridges
Carlos ZANUY—P. DE LA FUENTE, J. PACHECO, L. ALBAJAR, Spain .......................... 118

Crack widths close the reinforcement
Kristian TAMMO—S. THELANDERSSON, K. LUNDGREN, Sweden ............................. 120

An Experimental Study on the Concrete Durability
Corneliu BOB, O. ABRI, Romania ......................................................... 122

Influence of sustained and cyclic loading on the bond behavior of pretensioned strands
Josef HEGGER—S. BÜLTE, N. WILL, Germany .............................................. 124

New approaches for the determination of the cable factor in post-tensioning tendons
Hermann WEIHER—E. SPECHT, B. PFEIFFER, K. KLAMROTH, K. ZILCH, Germany 126

Long-term behaviour of timber-concrete composite bridges
Antje DÖHRER—K. RAUTENSTRAUCH, Germany ............................................. 128

C4 Traffic Structures—Built for a Long and Efficient Life

Tubular Trusses for Steel-Concrete Composite Bridges
Manfred A. HIRT—A. NUSSBAUMER, Switzerland ......................................... 132

Holistic Design Methods for Hybrid Arch Bridges
Matthias WEISSBACH, Germany ............................................................. 134

Lateral torsional buckling of steel-concrete composite bridge I-girders
Laurence DAVAINE—J.P. LEBET*, France, Switzerland* .................................. 136

A Survey on Patch Loading Models for Bridge Launching

Compression members with slender Class 4 box sections susceptible to combined local and global buckling for use in steel arch bridges
Hervé DEGÉE*—U. KUHLMANN, R. MAQUOI*, A. DETZEL, Belgium*, Germany ... 140

New Steel-Concrete Adherence Connections for Composite Bridges
Jean-Paul LEBET—M. THOMANN, Switzerland ............................................... 142
SESSION E
E1 Important Design Considerations—Design for Durability and Sustainability

The Durability of Repaired Concrete Structures
Graham TILLY, UK ................................................................. 146

A new European Standard on products and systems for Protection and Repair of concrete structures—EN 1504
Peter J. GUSIA, Germany ......................................................... 148

Structural Assessment and Rehabilitation of Concrete Bridges
Guido FURLANETTO—A. MARCHIONDELLI, L. F. TORRICELLI, Italy ............. 150

Methodology for Inspection of Reinforced Concrete Subway Tunnel
Fernando YANEZ—F. DELFIN, V. AGUILA, V. TORRENS, I. LOPEZ, Chile ............ 152

Punching Shear Retrofit of Reinforced Concrete Flat Slabs Subjected to Static and reversed Cyclic Loads
Wensheng BU—M. A. POLAK, Canada ......................................... 154

Effects of Light Rail Traffic on a 30 year old Cable Stayed Bridge
Phalippe VAN BOGAERT, Belgium ............................................. 156

E2 Traffic Structures—Built for a Long and Efficient Life

The “Ziegelgrabenbrücke” Main Structure of the second “Strelasundquerung”
Karl KLEINHANSS, Germany ..................................................... 160

Indigenous and Signature Bridges—Attitudes towards improvement of infrastructure
Mike SCHLAICH, Germany ......................................................... 162

Zhoushan Island-Mainland Connection Project Built for a long and efficient life
Chang-Jiang WANG—Y. J. GE, H. SONG, Y.-X. YANG, W.-G. WANG,
X.-Y. CHEN, China ................................................................. 164

Design and Construction of Metsovitikos Bridge, Greece
Kamran AHMADI-KASHANI—P. PAPANIKOLAS, I. RENTZEPERIS, Greece .......... 166

Pushing the limits of U shaped viaducts
Yves GAUTHIER—A. TOUAT, S. MONTENS, R. KATARIA*, France, India* ............. 168

A new concept for a large vertical lift bridge over the river Seine in Rouen
Michel MOUSSARD, France ........................................................ 170

E3 Important Design Considerations—Design for Durability and Sustainability

Steel-concrete composite bridges subjected to fatigue loading
Markus PORSCH—C. USTUNDAG, G. HANSWILLE, Germany ......................... 174

Fatigue assessment of composite bridges in high speed railway lines including resonance phenomena
Helder FIGUEIREDO—R. CALÇADA, R. DELGADO, Portugal ......................... 176
Strength and Ductility of Welded High Strength Steel (HSS) Connections in Bridges
Hans-Peter GÜNTHER—C. RASCHE, U. KUHLMANN, Germany ............................... 178

Benefits of post-weld treatment to improve tubular bridge fatigue performance
Scott WALBRIDGE—A. NUSSBAUMER*, Canada, Switzerland* ............................. 180

Steel railway bridge deck design for noise emission and maintenance cost reduction
Bert HESSELINK—B. SNIJDER, The Netherlands .................................................. 182

A Review of North American Railway Bridge Research
Robert A.P. SWEENEY—D. OTTER*, Canada, USA* ........................................... 184

E4 Traffic Structures—Built for a Long and Efficient Life

Segmental hollow box girder bridges with bow shaped segments
Guenter ROMBACH—R. ABENDEH, Germany ......................................................... 188

Analysis and behaviour of CFRP-strips at deviation saddle for CFRP prestressed bridges
Jan KNIPPERS—F. SAAD*, M. HWASH, Germany, Egypt* .................................. 190

Wedge Anchor Fiber Reinforced Plastics (FRP)
Stefan BURTSCHER, Austria ..................................................................................... 192

Self-compacting concrete in bridge construction on federal trunk roads
Franka TAUSCHER, Germany ................................................................................... 194

Development of a structural system for short span bridges
Anja STERNBERG—V. SIGRIST, Germany ................................................................. 196

Integration of manufacturability in structural optimisation, applied to optimisation of cast nodes
Jeroen COENDERS—H.D. PEARSE*, The Netherlands, UK* .................................. 198

E5 Check Engineering and Monitoring—International Review on Quality Control Systems

Structural health monitoring with wireless sensors to enhance sustainability in structural engineering
Markus KRUEGER—H. W. REINHARDT, C. U. GROSSE, Germany ......................... 202

Structural health monitoring of existing bridges by vibration measurement
Takeshi MIYASHITA—M. NAGAI, E. IWASAKI, Japan ............................................. 204

Laser scanning for bridge inspection and management
Pingbo TANG—B. AKINCI, J. GARRETT, USA ....................................................... 206

Monitoring of bridges by advanced methods of experimental-mechanical symbiosis
Klaus BRANDES—W. DAUM, F. BUCHHARDT, Germany ....................................... 208

Remote monitoring of bridge stay cables
Roman GEIER—S. HOFFMANN, J. DISTL*, Austria, Germany* ............................ 210
Dynamic characteristics of Seohae cable-stayed bridge based on results from long-term structural health monitoring
Jong Chil PARK—C. PARK, H. KANG, B. JO, Korea ........................................... 212

SESSION F
F1 Important Design Considerations — Design for Durability and Sustainability

Structural steel maintenance and rehabilitation methods of current canadian infrastructure
Siegfried F. STIEMER, Canada ................................................................. 216

Efficient reconstruction of bridges with small and medium spans
Oliver HECHLER—A. GIRKES*, Luxembourg, Germany* .................. 218

Using SPS technology to strengthen an orthotropic bridge deck
Gero A. MARZAHN—M. HAMME, Germany ........................................... 220

Replacing US railroad bridges within hours, a.k.a Change Outs ‘Railroad Bridge Change-outs’
Fernando MOREU, USA ........................................................................ 222

Rehabilitation and Simulation of Movable Bridge
Xue LIU—W. CHEN, G. YANG, China ..................................................... 224

External post-tensioning retrofit and high- and low-cycle fatigue study of connections and joints in steel-concrete box-girder bridges
Oreste S. BURSI—M. FORTE, A. MAMMINO, N. TONDINI, E. TONON, Italy 228

F2 Traffic Structures — Built for a Long and Efficient Life

Canal-Bridge-Magdeburg — Preliminary investigations, design, construction and operation
Michael MUENDECKE—C. RUSZCZYNSKI, H. STRATMANN, Germany .... 232

Design and construction innovations for the puente centenario, Panama
Rafael MANZANAREZ—A. SANJINES, R. DONIKIAN, K. HUMPF*, USA, Germany* 234

Cable-stayed bridge over the Labe River at Nymburk — hybrid and efficient solution in given context
Milan KALNY—V. KVASNIÉKA, P. NÍMEC, A. BRNUŠÁK, Czechia ............ 236

The Balsberg viaduct of the new light rail network to Zurich-airport
Daia ZWICKY—T. LÜTHI, Switzerland ................................................... 238

Large composite bridges with strutted frame systems
Karl-Heinz REINTJES, Germany ............................................................ 240

Nesciobrug, Amsterdam. A symbol for a new suburb, inspirational and functional
Angus LOW—Y. ICHIMARU, UK ................................................................. 242
F3 Check Engineering and Monitoring—International Review on Quality Control Systems

Monitoring of railway bridges—an advanced component of maintenance and sustainability
Steffen MARX—K. GEISSLER, G. BOLLE, Germany ................................. 246

Development of advanced robot system for bridge inspection and monitoring
Jong Seh LEE—I. HWANG, H. S. LEE, Korea ................................. 248

Planning the future of regional road infrastructure: a case study
Daniele ZONTA—R. ZANDONINI, R. BORTOT, Italy ................................. 250

Soft-WIM: vehicle identification from bridge measurement
Martina SCHNELLENBACH-HELD—P. LUBASCH, W. BUSCHMEYER, Germany 252

Preliminary estimation of seismic vulnerability of a database of bridges located at the Mexican Pacific Coast
Consuelo GÓMEZ-SOBERÓN—L. A. Barrera Bautista, Mexico ................................. 254

Monitoring of a bridge with integral abutment
Martin NILSSON—M. VELJKOVIC, W. HUSSON, H. PETURSSON, P. COLLIN, Sweden ................................. 256

F4 Traffic Structures—Built for a Long and Efficient Life

Aesthetic issues of railway stations in Japan and in Europe
Ewa Maria KIDO, Japan ................................. 260

Glass constructions for infrastructure—new subway stations in Munich
Geralt SIEBERT, Germany ................................. 262

Blast resistance of structural members
Marcus P. RUTNER, Germany ................................. 264

Development and design of noise protection walls for high speed railways
Benno HOFFMEISTER, Germany ................................. 266

Ensuring safety for building construction in the UK
D A NETHERCOT—G. HARDING, UK ................................. 268

A concrete code for Africa
Jan A. WIUM—A. S. NGAB*, South Africa, Libya* ................................. 270

F5 Infrastructure as a Unifying Concept

Projects German unity—the tunnel chain of A 44 overcomes the division of Germany
Eberhard PELKE—K. J. SEEGER, Germany ................................. 274

Earthquake resistant post-tensioned concrete bridges in Egnatia Motorway
Theodoros TZAVEAS—E. GAVAISE, K. PARASCHOS, Greece ................................. 276

The New Metro of Oporto: A variety of bridge projects
Antonio REIS—N. LOPES, D. RIBEIRO, Portugal ................................. 278
Improving Infrastructure Worldwide

---

**Bridges along highway ring road of Wroclaw**
Jan BILISZCZUK—J. ONYSYK, W. BARCIK, K. SADOWSKI, P. PRABUCKI, J. SZCZEPÁNSKI, M. SULKOWSKI, Poland ............................... 280

**Incrementally launched bridges along the A 71/73—Special Features**
Roland VON WÖLFEL, Germany .................................................... 282

---

**SESSION G**

**G1 Important Design Considerations—Design for Durability and Sustainability**

*Management and design software for the entire bridge life cycle*
Jose ALDAYUZ—J. CAMPBELL, J. DURAY, USA .................................. 286

*LCC-based bridge maintenance strategy in Yamaguchi prefecture*
Ayaho MIYAMOTO—J. ISHIDA, Japan .............................................. 288

*Maintenance planning for deteriorating bridges using preference-based optimization method*
Sun Young LEE—H.-M. KOH, W. PARK, S. W. LEE, H. J. KIM, Korea ........... 290

*A risk-based approach to corrosion protection and maintenance of steel bridges*
S. F. STIEMER—P. CHAN, Canada .................................................. 292

*Risk assessment of a long span unsymmetrical extroversion arch bridge*
Xin RUAN—A. CHEN, China ......................................................... 294

*Evaluation on remaining bearing capacity and service life for parallel wire cable*
Weizhen CHEN—X. LIU, J. XU, China ............................................. 296

---

**G2 Important Design Considerations—Design for Movements**

*Expansion joints subjected to extreme movement conditions—The particular challenges*
Thomas SPULER—G. MOOR, T. BRÜGGER, Switzerland .......................... 300

*Bridge expansion joints—design for movements, performance and durability*
Bo EDLUND—R. CROCETTI, Sweden ................................................. 302

*Dynamic design of modular bridge expansion joints by the finite element method*
Eric ANCICH, Australia ............................................................... 304

*Dynamic behaviour of modular expansion joints*
Johan LEENDERTZ—B. VOLK*, O. NAGEL*, F. WEBER**, The Netherlands, Germany*, Switzerland** ........................................ 306

*Integral bridges. First integral railway bridge in Czech Republic*
Roman SAFAR, Czech Republic ..................................................... 308

*Jointless concrete bridges—development of a flexible abutment*
Michael PÖTZL, Germany ............................................................ 310
G3 Check Engineering and Monitoring—International Review on Quality Control Systems

Uniform concept for structural stability and fire protection
Bernd DRESSEL—H. P. ANDRAE, Germany ..................................................... 314

Comparison of European building control systems
Rainer MIKULITS—M. TIEDEMANN*, Austria, Germany* ............................. 316

Failure analysis as a base for developing quality control system
Robert HERTLE, Germany ................................................................. 318

A review of 30 years use of UK design check procedures for bridges
Angus LOW, UK .................................................................................. 320

Certification and operation audit of segmental bridge launching gantries
Jonathan C. MCGORMLEY—R. SCHUETTE*, H. J. HILL, USA, Canada* .......... 322

Incheon bridge project—the role of the contractor’s checking engineer
Innes D. FLETT—M. CARTER*, A. YEOWARD**, N. HUSSAIN*,
UK, Hong Kong*, China** ..................................................................... 324

G4 Traffic Structures—Built for a Long and Efficient Life

Design of first hybrid UHPC-steel bridge across River Fulda in Kassel, Germany
Ekkehard FEHLING—K. BUNJE, M. SCHMIDT, N. V. TUE, W. SCHREIBER,
E. HUMBURG, Germany ........................................................................ 328

Collapse process analysis in construction of concrete-filled steel tube arch bridge
Xuefei SHI—X. RUAN, K. HU, D. SUN, J. WANG, China .............................. 330

The FRP Bridge in Friedberg Germany: design, analysis and material tests
Jan KNIPPERS—E. PELKE, D. BERGER, M. GABLER, Germany .................... 332

Traffic infrastructure innovation by integration of the traffic and parking facilities
Volkhard ANGELMAIER, Germany ........................................................... 334

Design of an aluminium bicycle path integrated in a steel bridge
Johan MALJAARS—F. SOETENS, H. BURGGRAAF, The Netherlands .......... 336

A cable-stayed footbridge made of glued-laminated wood—design, erection and experimental investigations
Jan BILISZCZUK—P. HAWRYSZKOW, A. MAURY, M. SULKOWSKI,
M. WĘGRZYNIAK, Poland ................................................................. 338

SESSION H
H1 Important Design Considerations—Design for Durability and Sustainability

Improving bridge infrastructure through rehabilitation—an Indian experience
Padmakar MANJURE, India ..................................................................... 342

Replacement of the woodrow Wilson Memorial Bridge Bascule Span
Serafim G. ARZOUMANIDIS—S. BLUNI, USA ........................................... 344
Rehabilitation and strengthening of Sylva Bridge at Kungur, Russia
Michael TIMOFEEV—R. GEYZEN, Russia .............................................. 346

Parameter- and system identification on bridges with optimization methods
Roger SCHLEGEL—J. WILL, Germany .................................................... 348

Reconstruction of Lahti station area, demands of the new fast speed railroad between Helsinki and Lahti
Ilkka VILONEN, Finland .............................................................. 350

H2 Important Design Considerations—Design for Movements

Elongated Life Span for Bearings and Expansion Joints
Georg M. WOLFF, Austria ................................................................. 354

Modeling of bearings in structural systems for bridges
Ursula FREUNDT—R. VOGT, Germany ................................................. 356

Long-term monitoring the bearings of the Ponte 25 de Abril in Lisbon
Simon HOFFMANN—K. BERGMEISTER, Austria ................................. 358

Long-term monitoring of Haavistonjoki Bridge
Anssi LAAKSONEN—Olli KEROKOSKI, Finland ..................................... 360

Improvement of safety on bridges—measured-impact-loads
Ulrich BERGERHAUSEN, Germany ...................................................... 362

H3 Check Engineering and Monitoring—International Review on Quality Control Systems

Design of infrastructure including monitoring regimes to evaluate the performance and schedule maintenance on infrastructure over the entire life time
Michael SIEGWART—P. ZWICKY, Switzerland .................................... 366

Inspection and risks of hidden defects
Graham TILLY, UK ......................................................................... 368

Inspection, Monitoring and Management of Bridges on Federal Roads in Germany
Jürgen KRIEGER—R. HOLST, Germany ................................................. 370

Monitoring as a tool for the ‘‘Observational Method’’
Onno LANGHORST—B. OBLADEN, G. KAPTEIN, C. BOSMA, The Netherlands .... 372

Automation based structural monitoring systems for ordinary bridges
Risto KIVILUOMA, Finland ............................................................ 374

H4 Traffic Structures—Built for a Long and Efficient Life

Behavior of partially earth anchored cable-stayed bridge considering construction phase and operational phase

Effect of cable loss in cable stayed bridges—Focus on dynamic amplification
Yongsuk PARK—U. STAROSSEK*, H.-M. KOH, J.F. CHOO, H. KIM, S.W. LEE, Korea, Germany* ............................. 380
Experimental study on vibration mitigation of long stay cables using cross ties
Limin SUN—Y. ZHOU, China ................................................................. 382

Software for structural engineering and construction: the past, the present, and the future
Ondrej KALNY, USA ................................................................. 384

Computer Aided Design & Erection of Long Suspension Bridges
Dorian JANJIC, H. BOKAN, H. SORSKY, J. STAMPLER, Austria .................. 386

SESSION I

11 Important Design Considerations—Design for Durability and Sustainability

Quantitative risk analysis for road tunnels
Jürgen KRIEGER—F. HEIMBECHER, C. ZULAUF*, Germany, Switzerland* ........ 390

End-to-end maintenance management of major bridges and tunnels using the internet-based DANBRO + System
John BJERRUM—J. K. TUXEN, B. LASSEN, F. JENSEN, Denmark .................. 392

Facility Management for an improved serviceability of road tunnels
Frank HEIMBECHER—I. KAUNDININGA, Germany ........................................ 394

Risk management system for pylon Construction of a Long Span Cable-Stayed Bridge
Airong CHEN—X. RUAN, X. OUYANG, J. ZHANG, China ............................. 396

Modeling for Frost Damage and Life Cycle Prediction
Tamon UEDA, Japan .............................................................................. 398

Differences in maintenance strategies between infrastructure and real estate buildings
Hans-Joachim BARGSTÄDT—K. AILLAND, Germany ................................. 400

12 Important Design Considerations—Design for Movements

The Sliding isolation pendulum for seismic protection of buildings
Peter HUBER—R. MEDEOT*, Germany, Italy* ................................................... 404

Improvement of seismic capacity of bridges using seismic isolation system in Korea

Sensitivity-based optimal design of linear damper system for enhanced seismic performance of coupled structural system

Calculation of displacements for base isolation systems with bilinear behaviour
Heiko MÜLLER—U. FREUNDT, Germany ....................................................... 410

Studies on Seismic Retrofit of the Honshu-Shikoku Bridges Using Isolation and Dissipation Devices
Kazuo ENDO—S. KAWABATA, S. OGO, Japan ................................................. 412
Improving Infrastructure Worldwide

Design, Implementation and Field Test of the Adaptive Damping System of the Franjo Tudjman Bridge nearby Dubrovnik, Croatia
Felix WEBER—H. DISTL*, P. HUBER*, O. NÜTZEL*, M. MOTAVALLI, Switzerland, Germany* ................................................................. 414

13 Check Engineering and Monitoring—International Review on Quality Control Systems

Reliability and progressive collapse of structures
Ane DE BOER—C. VAN DER VEEN, The Netherlands ........................................ 418

The work and influence of the Standing Committee on Structural Safety (SCOSS)
John CARPENTER—S. ALEXANDER, UK ......................................................... 420

Quality Control on an Australia’s Largest Road Construction Project
Geoff TAPLIN—P. BALFE, Australia .............................................................. 422

How reliable is our building process
Dirk MANS—E. KOOL, The Netherlands ....................................................... 424

The Key Techniques For Sutong Bridge Construction Control
Hong ZHANG—R. SHAM, Y. ZHANG, China .................................................. 426

Developments in Private Sector Certification of Building Structure Design
Douglas WALKER, UK .............................................................................. 428

POSTER SESSION

Bi-directional Seismic Response Control for Bridge Structures
E. Shehata ABDEL RAHEEM—T. HAYASHIKAWA*, Egypt, Japan* ...................... 432

Development strategies for a web-based bridge maintenance management system
Ferhat AKGÜL, Turkey .............................................................................. 434

Design and Durability of Highway Overpasses
Peter SESAR—Z. BANIC, S. PASTORCIC, Croatia .......................................... 436

The durability of timber bridges
Vincent BARBIER, France ........................................................................... 438

Life cycle considerations for infrastructure facilities
Hans-Joachim BARGSTÄDT—A. HEGEWALD, Germany ............................... 440

Bridges using an innovative wood-concrete-composite system for applications under dynamic loads
Leander A. BATHON—O. Bletz, Germany ........................................................ 442

Wind Tunnel Validation of Vortex Method for Aerodynamic Coefficients
Marcos BEIER—A. LOREDO-SOUZA, M. M. ROCHA, D. JANJIC*, A. DOMAINGO*, Brazil, Austria* ................................................ 444

Movable Bridges in the Infrastructure
Charles BIRNSTIEL, USA .......................................................................... 446

Shear capacity of reinforced concrete pile caps
Jing CAO—A. BLOODWORTH, M. XU, UK ..................................................... 448
Condition Evaluation of Riveted Steel Bridges by Minimal Invasive Methods
Klaus BRANDES, Germany ................................................. 450

Road Bridge Expansion Joints—Reduction of the overrolling Noise caused of Vehicles during crossing the Expansion Joint
Joachim BRAUN—T. SCHULZE, Germany .......................... 452

Assessment of steel railway bridges for future traffic demands—a case study
B.Ozden CAGLAYAN—E. UZGIDER, K. OZAKGULK, O. TEZER, Turkey .................. 454

Experimental and Numerical Study of Full-range Behaviour of Partially Prestressed Concrete Beams with Externally Tendons
K. H. Enoch CHAN—F. T. K. AU, A. K. H. KWAN, Hong Kong, China ................. 456

Experimental Study on Flexural Behavior of Concrete Filled Steel Tube Girder Bridges
Won Jong CHIN—J. Y. KANG, E. S. CHOI, J. W. LEE, B. S. KIM, Korea .................. 458

Hysteretic Model Development and Seismic Response of Unbonded Post-Tensioned Precast CFT Segmental Bridge Columns
Chung-Che CHOU—C.-P. HSU, Taiwan, China ........................ 460

Fatigue evaluation of a railway steel bridge based on field test data
Chunsheng WANG—H. QIAN, A. ZHAN, X. YU, China ........................................ 462

Use of whitetopping to strengthen and repair damaged road pavements
Gianluca CUOMO, Italy ..................................................... 464

Mix design and properties of Ultra-High Performance Fibre Reinforced Concrete for the construction of a composite UHPFRC—concrete bridge
Michael SCHMIDT—E. BRUHWILER*, E. FEHLING, E. DENARIE*, T. LEUTBECHER, T. TEICHMANN, Germany, Switzerland* ..................... 466

New structural frontiers for the self compacting concrete. The Tevere River Bridge
Guido FURLANETTO—L. F. TORRICELLI, Milan, Italy ......................... 468

A1 Milan-Naples Motorway—The Variante di Valico Project
Guido FURLANETTO—O. MAZZA, L. T. FERRETTI, A. MARCHIONDELLI, Italy 470

The importance of the four-eye principle and site supervision
Matthias GEROLD, Germany .............................................. 472

Loads caused by earthquakes and ship impact—experiences from current projects
Rainer GRIMM—M. KEUSER, J. TIKALSKY, Germany .......................... 474

Fatigue life of concrete bridges under consideration of increasing traffic loads
Jürgen GRÜNBERG—M. HANSEN, J. P. LIEBIG, Germany ..................... 476

Strengthening of Coupling Joints on Concrete Bridges
Peter J. GUSIA, Germany .................................................. 478

Seismic performance of bridges with isolation bearings
Kyoung-Bong HAN—S.-K. PARK, K.-S. KIM, T.-W. KIM, Y.-J. LEE, Korea .............. 480
Expansion Joints for Road Bridges—Requirements and Reality—Durability and Noise
Arnold HEMMERT-HALSWICK, Germany ........................................... 482

Cost-benefit criteria in optimizing maintenance strategies
Shoko HIGUCHI—M. MACKE, Germany .................................................. 484

Structural Performance of Easy Slab Bridge as New Structural Type
Hideyuki HONDA—M. TOKUNO, H. KOMATSU, Japan .............................. 486

Flexural Behavior of RC Beams strengthened with Near Surface Mounted
Prestressed CFRP
Korea, Canada* ................................................................. 488

Experimental Study on Repairing Method for Corroded Steel Member by Carbon
Fiber Sheets
Naofumi INABA—M. NAGAI, Y. TOMITA, A. KOBAYASHI, H. SUGIURA, Japan ... 490

Ecoduct Zanderij Crailo
Hans JONGEBLOED—B. BOODE, A. M. KRUIDERING, The Netherlands ........... 492

Risk-oriented computerized planning of structural health monitoring of
infrastructure
Christoph KLINZMANN—R. SCHNETGÖKE, D. HOSSER, Germany .................. 494

Croatian Experiences in Motorway Network Development and Possibilities
for the Future
Petar SESAR—A. KRECAK, S. PASTORCIC, Croatia .................................. 496

Control of dimensioning and investigation of the bridge
Valdek KULBACH—E. KIVI, Estonia .................................................... 498

The ultimate strength of concrete-filled composite columns
Young Bong KWON—J. H. KIM, Korea .............................................. 500

Flight Optimization Algorithms for Aerial LiDAR Capture for Urban
Infrastructure Model Generation
Debra F. LAEFER—H. CARR, T. HINKS, Ireland ................................... 502

Anticipation of repair need of bridges based on visual inspection of Finnish
bridges
Markku ÄIJÄLÄ—J. LAHDENSIVU, Finland ........................................... 504

Load-bearing reserves of existing bridges
Hans-Gerd LINDLAR—J. SCHNELL, Germany ...................................... 506

Evaluation of connection flexibility in a road bridge
Czeslaw MACHELSKI—R. TOCZKIEWICZ, Poland .................................. 508

Planning of Rail Bridges on Katra—Quazigund Railway line in
Jammu & Kashmir
Pradeep MAHAJAN, India ............................................................ 510
Durability of fiber reinforced lightweight aggregate concrete
Mehrdad MAHOUTIAN—N. A. LIBRE, M. SHEKARCHI, M. MORADI MARANI,
Iran ................................................................. 512

Tests to investigate explosive spalling of concrete lining exposed to fire
Radim CAJKA—P. MATECKOVA, P. KUCERA, Czech Republic .................. 514

Effective Use of Corrosion Inhibitors in Highway Structures
Mark G. RICHARDSON—C. MCNALLY, Ireland ..................................... 516

Re-centring Capability Evaluation of Seismic Isolation Systems
Renzo MEDEOT, Italy ..................................................... 518

Possibilities of Using Sensing Technology for Railroad Bridges Repair and
Maintenance
Fernando MOREU—T. NAGAYAMA*, USA, Japan* ............................. 520

Innovative Solutions in immersed tunnelling
Ronald GOETHEER—B. LOUIS, The Netherlands .............................. 522

Ramberg-Osgood and Manson-Coffin Relation for Headed Shear Studs in Fatigue
Loading
Christoph ODENBREIT—W. DORKA*, Luxemburg, Germany* ............. 524

Experimental and numerical investigations for I-girders in bending and shear
stiffened by closed trapezoidal stiffeners for use in steel bridges
Matthias OPPE—M. FELDMANN, J. NAUMES, H. DEGEE*, R. MAQUOI*,
N. BOISSONADE*, Germany, Belgium* .................................. 526

Influence of the bearing systems on the buckling behaviour of arch bridges
Amelie OUTTIER—H. DE BACKER, P. VAN BOGAERT, Belgium .......... 528

Fatigue Damage Study of Prestressed Concrete Bridges
Suraj PARKASH—R. Kumar, India .............................................. 530

A new bridge for gibraltar strait
Marco PERONI, Italy ....................................................... 532

Checking of Bridges for the new Taiwan High Speed Rail
Uwe REINBECK, Germany ..................................................... 534

National Road B 31—The Realization of a Privately Financed Project
Ioannis RETZEPIS, Germany .................................................. 536

Durable and Low-maintenance Structural Concrete infrastructures is a
Long-Term Societal Asset
Carola EDVARDSEN—S. ROSTAM, Denmark ................................. 538

The Design Process for Rail Stations and Modal Integration: Delhi Metro
B. C. ROY—R. EKAMBARAM, T. GUHA, India ............................... 540

Ultimate Load Carrying Capacity of Two Long Span Arch Bridge
Xin RUAN—X. SHI, Z. TIAN, J. WANG, China ................................. 542

Enhancement of Service Life of Steel Bridges
Asim K. SAMANTA, India ...................................................... 544
Ductility of Beams Strengthened with Externally Bonded Composites
Emil de Souza SÁNCHEZ FILHO—J. J. HOLTZ, J. J. H. SILVA FILHO,
M. T. BARBOSA, Brazil ...................................................... 546

Stuttgart 21 Main Station—Shape development and Modelling of the New Station Hall
Dieter SANDNER—D. MOK, Germany ...................................... 548

The Contribution of Latin America to the Development of Long Span Bridges
Reiner SAUL—K. HUMPF, Germany ........................................... 550

730m Main Span Combined Highway and Railway Cable-stayed Bridge
Changyu SHAO—Y. LU, Q. DENG, China ................................. 552

Effect of Cracking on the Torsional Stiffness of the Taiwan High Speed train Box Girder Bridge
Josef HEGGER—A. SHERIF*, N. KERKENI, H. DOSER, Germany, Egypt* .................. 554

Transparent sound screens made of glass for motorways and railway stations
Barbara SIEBERT, Germany .................................................. 556

Bridge Bearings—Structural design requirements
Harminder SINGH, Ireland .................................................. 558

Evaluation of Durable Protective Systems for Sewage Structures
Norbert STRATEMEIER—I. SPOHR, R. HÜTTL, R. BREITENBÜCHER, Germany ... 560

Remote monitoring: A new cost-effective, self-sufficient and versatile system will change the way bridges are monitored
Thomas SPULER—G. MOOR, C. O’SUILLLEABHAIN, Switzerland ......................... 562

Expansion joint renewal with “zero” traffic disruption? A solution using modern sliding finger joints
Thomas SPULER—G. MOOR, R. REIMANN, Switzerland ....................... 564

Expansion joints with noise reduction—will recent developments become widespread across Europe
Thomas SPULER—G. MOOR, B. URICH, Switzerland .......................... 566

Integrated Computer Wind Design for Bridge Engineering
Johann STAMPLER—D. JANJIC, A. DOMAINGO, Austria ....................... 568

Identification Strategies for Maintenance of Bridges
Roman WENDNER—A. STRAUSS, K. BERGMEISTER, D. NOVÁK*,
D. LEHKY*, D. M. FRANGOPOL**, Austria, Czech Republic*, USA** .................. 570

Improving infrastructure—saving of resources as a criteria for the award of public works contracts
Walter STREIT—A. JÄHRING, Germany .................................... 572

Modern expansion joints—design, applications and developments
Holger FLEDERER—R. STROETMANN, Germany ................................ 574

Durability of highway steel bridges in Czech Republic
Jiri JIRAK—J. STUDNICKA, Czech Republic .................................. 576
Performance of thin-walled steel structures by longitudinally and transversely profiled steel plates
Takuji KUMANO—K. SUGIURA, T. YAMAGUCHI, E. WATANABE, Y. SUZUKI, Japan .......................................................... 578

Comparative study of highway steel girder bridge between Japan and USA
Shouji TOMA—L. DUAN*, Japan, USA* ............................................. 580

On assignment in Istanbul: Retrofitting for 0.4g
André PLUMIER—W. VAN ALBOOM, Belgium .................................. 582

MOBILE—moveable bearings innovation launch in enlarged Europe
Helmut WENZEL—E. FORSTNER, Austria ........................................ 584

The main cable shape control and design of Sanchaj bridge
Song Xu MING—D. G. LIAN, China .................................................. 586

Erecting analysis of cable-stayed bridges by substructure procedures
De-Can YANG—Z.-J. CHEN, China .................................................. 588

Design and Construction of Shinminato Bridge
Hiroshi YOSHINAGA—T. YAMANOUCHI, Y. GOTO, M. NAGAI, Japan ............ 590

Ship Impact Protection System of Sutong Yangtze River Bridge
Hong YUAN—L. XU, X. ZHANG, China ............................................. 592

The Dynamic Behaviour of the ‘‘Erlebnisbrücke’’ on the BUGA in Ronneburg
Volkmar ZABEL—J. BLEIZIFFER, J. TRABERT, Germany ....................... 594

Structural Health Monitoring and Safety Evaluation System for Sutong Yangtse River Bridge
Yufeng ZHANG—Y. Q. NI, P. YAO, China ........................................... 596

Application of Logical Framework Approach on Sutong Bridge
Jian ZHAO, China .............................................................................. 598

Refurbishment of an arch bridge increasing its stiffness and reducing its weight
Tobia ZORDAN—B. BRISegHELLA, E. DE LA GRENNELAIS, E. SIVIERO, Italy ... 600

Structure evaluation of medium span steel bridges
Matej ZUPCIC—D. BANIC, D. TKALCIC, Croatia ................................. 602
