Solid State Chemistry: New Opportunities from Computer Simulations
A General Discussion on

Solid State Chemistry: New Opportunities from Computer Simulations

30th June, 1st and 2nd July, 1997

A General Discussion on Solid State Chemistry: New Opportunities from Computer Simulations was held at University College London, UK on 30th June, 1st and 2nd July, 1997.

Contents

1 Introductory Lecture: Computer modelling as a technique in solid state chemistry

41 Structure and reactivity of silica and zeolite catalysts by a combined quantum mechanics–shell-model potential approach based on DFT
   M. Sierka and J. Sauer

63 Computer simulations of organic solids and their liquid-state precursors
   A. Gavezzotti

79 Computer simulation of zeolite structure and reactivity using embedded cluster methods

93 Simulation of adsorption and diffusion of hydrocarbons in zeolites
   B. Smit, L. D. J. C. Loyens and G. L. M. M. Verbist

105 Temperature dependence of the levitation effect. Implications for separation of multicomponent mixtures
   S. Yashonath and C. Rajappa

119 General Discussion

135 Ab initio simulation of molecular processes on oxide surfaces
   P. J. D. Lindan, J. Muscat, S. Bates, N. M. Harrison and M. Gillan

155 Cluster model calculations of oxygen vacancies in SiO$_2$ and MgO. Formation energies, optical transitions and EPR spectra
   G. Pacchioni, A. M. Ferrari and G. Ierano

173 Structural, electronic and magnetic properties of KMF$_3$ (M = Mn, Fe, Co, Ni)
   R. Dovesi, F. Freyria Fava, C. Roetti and V. R. Saunders

189 Ab initio study of corundum-like Me$_2$O$_3$ oxides (Me = Ti, V, Cr, Fe, Co, Ni)
   M. Catti and G. Sandrone

205 First principles calculations on crystalline and liquid iron at Earth’s core conditions
   L. Vočadlo, G. A. de Wijs, G. Kresse, M. Gillan and G. D. Price

219 Semi-empirical methods as a tool in solid-state chemistry
   J. D. Gale
Ab initio simulations of non-stoichiometric lithium–oxygen clusters
F. Finocchi, T. Albaret and C. Noguera

Ab initio molecular dynamics study of crystal hydrates of HCl including path integral results
T. von Rosenvinge, M. E. Tuckerman and M. L. Klein

Monte Carlo simulations of pattern formation at solid/solid interfaces
G. Schulz and M. Martin

Grand canonical Monte Carlo simulations of adsorption of mixtures of xylene molecules in faujasite zeolites
V. Lachet, A. Boutin, B. Tavitian and A. H. Fuchs

Computation of the free energy for alternative crystal structures of hard spheres
L. V. Woodcock

Relationship of crystal structures to interionic interactions in mono-, di-, tri- and ter-valent metal oxides
M. Wilson and P. A. Madden

From oxides to oxyhalides: modelling the properties of high $T_c$ superconductors
M. S. Islam, M. S. D. Read and S. D'Arco

Free energy of formation of defects in polar solids

Rearrangements of bulk face-centred-cubic nickel modelled by a Sutton–Chen potential
L. J. Munro and D. J. Wales

Role of tip contamination in scanning force microscopy imaging of ionic surfaces
A. I. Livshits and A. L. Shluger

Computational study of zeolitic-proton–palladium chemistry
R. Harmsen, S. Bates and R. A. van Santen

Application of computer modelling to the mechanisms of synthesis of microporous catalytic materials

Molecular modelling of templated zeolite synthesis
P. A. Cox, J. L. Casci and A. P. Stevens

Accelerated approach to non-framework cation placement in crystalline materials
A. M. Gorman, C. M. Freeman, C. M. Kölmel and J. M. Newsam
