## Contents

*Preface*  
xiii  

1 **Introduction**  
1.1 Gauge invariance  
1.2 Reasons for gauge theories of strong and electroweak interactions  
QCD  
Electroweak theory  
1.3 Non-abelian gauge field lagrangian  
$U(1)$ gauge symmetry  
Non-abelian gauge symmetry  
Problems  

2 **Path integral formulation of quantum field theory**  
2.1 Path integrals in quantum mechanics  
Transition matrix elements as path integrals  
Matrix elements of position operators  
2.2 Vacuum-to-vacuum transitions and the imaginary time formalism  
General discussion  
Harmonic oscillator  
Euclidean Green's functions  
2.3 Path integral formulation of quantum field theory  
Green's functions as path integrals  
Action quadratic in fields  
Gaussian integration  
2.4 Introduction to perturbation theory  
Perturbation theory and the generating functional  
Wick's theorem  
An example: four-point Green's function in $\lambda\Phi^4$  
Momentum space  
2.5 Path integrals for fermions; Grassmann algebra  
Anticommuting $c$-numbers  
Fermion propagator  
2.6 Generating functionals for Green's functions and proper vertices; effective potential

### Contents

Classification of Green's functions and generating functionals 48  
Effective action 50  
Spontaneous symmetry breaking and effective action 52  
Effective potential 54  
2.7 Green's functions and the scattering operator 55  
*Problems* 61  

3 Feynman rules for Yang–Mills theories 64  
3.1 Faddeev–Popov determinant 64  
Gauge invariance and the path integral 64  
Faddeev–Popov determinant 66  
Examples 69  
Non-covariant gauges 71  
3.2 Feynman rules for QCD 73  
Calculation of the Faddeev–Popov determinant 73  
Feynman rules 74  
3.3 Unitarity, ghosts, Becchi–Rouet–Stora transformation 78  
Unitarity and ghosts 78  
BRS and anti-BRS symmetry 81  
*Problems* 85  

4 Introduction to the theory of renormalization 86  
4.1 Physical sense of renormalization and its arbitrariness 86  
Bare and 'physical' quantities 86  
Counterterms and the renormalization conditions 89  
Arbitrariness of renormalization 90  
Final remarks 93  
4.2 Classification of the divergent diagrams 94  
Structure of the UV divergences by momentum power counting 94  
Classification of divergent diagrams 95  
Necessary counterterms 98  
4.3 $\lambda\Phi^4$: low order renormalization 100  
Feynman rules including counterterms 100  
Calculation of Fig. 4.8(b) 102  
Comments on analytic continuation to $n \neq 4$ dimensions 104  
Lowest order renormalization 105  

5 Quantum electrodynamics 109  
5.1 Ward–Takahashi identities 111  
General derivation by the functional technique 111  
Examples 112  
5.2 Lowest order QED radiative corrections by the dimensional regularization technique 115  
General introduction 115  
Vacuum polarization 116  
Electron self-energy correction 118  
Electron self-energy: IR singularities regularized by photon mass 120  
On-shell vertex correction 121  
5.3 Massless QED 124
5.4 Dispersion calculation of $O(\alpha)$ virtual corrections in massless QED, in $(4 \pm \varepsilon)$ dimensions 126
Self-energy calculation 126
Vertex calculation 128
5.5 Coulomb scattering and the IR problem 129
Corrections of order $\alpha$ 129
IR problem to all orders in $\alpha$ 134
Problems 136
6 Renormalization group 138
6.1 Renormalization group equation (RGE) 138
Derivation of the RGE 138
Solving the RGE 141
Green's functions for rescaled momenta 143
RGE in QED 144
6.2 Calculation of the renormalization group functions $\beta, \gamma, \gamma_m$ 145
6.3 Fixed points; effective coupling constant 147
Fixed points 147
Effective coupling constant 150
6.4 Renormalization scheme and gauge dependence of the RGE parameters 152
Renormalization scheme dependence 152
Effective $\alpha$ in QED 153
Gauge dependence of the $\beta$-function 154
Problems 156
7 Scale invariance and operator product expansion 157
7.1 Scale invariance 157
Scale transformations 157
Dilatation current 159
Conformal transformations 161
7.2 Broken scale invariance 163
General discussion 163
Anomalous breaking of scale invariance 164
7.3 Dimensional transmutation 168
7.4 Operator product expansion (OPE) 169
Short distance expansion 169
Light-cone expansion 173
7.5 The relevance of the light-cone 174
Electron–positron annihilation 174
Deep inelastic hadron leptoproduction 175
Wilson coefficients and moments of the structure function 179
7.6 Renormalization group and OPE 181
Renormalization of composite operators 181
RGE for Wilson coefficients 183
OPE beyond perturbation theory 185
Problems 185
8 Quantum chromodynamics 188
8.1 General introduction 188

Contents

10.4 Electromagnetic $\pi^+-\pi^0$ mass difference and spectral function sum rules 270
    Electromagnetic $\pi^+-\pi^0$ mass difference from Dashen's formula 270
    Spectral function sum rules 271
    Results 273

11 Spontaneous breaking of gauge symmetry 276
11.1 Higgs mechanism 276
11.2 Spontaneous gauge symmetry breaking by radiative corrections 280
11.3 Dynamical breaking of gauge symmetries and vacuum alignment 285
    Dynamical breaking of gauge symmetry 285
    Examples 288
    Problems 293

12 Chiral anomalies 295
12.1 Triangle diagram and different renormalization conditions 295
    Introduction 295
    Calculation of the triangle amplitude 297
    Different renormalization constraints for the triangle amplitude 301
    Important comments 303
12.2 Some physical consequences of the chiral anomalies 306
    Chiral invariance in spinor electrodynamics 306
    $\pi^0 \rightarrow 2\gamma$ 307
    Chiral anomaly for the axial $U(1)$ current in QCD; $U_A(1)$ problem 309
    Anomaly cancellation in the $SU(2) \times U(1)$ electroweak theory 311
    Anomaly free models 314
12.3 Anomalies and the path integral 314
    Introduction 314
    Abelian anomaly 316
    Non-abelian anomaly and gauge invariance 316
    Consistent and covariant anomaly 320
12.4 Anomalies from the path integral in Euclidean space 321
    Introduction 321
    Abelian anomaly 323
    Non-abelian anomaly 325
    Problems 327

13 Effective lagrangians 329
13.1 Non-linear realization of the symmetry group 329
    Non-linear $\sigma$-model 329
    Effective lagrangian in the $\xi_a(x)$ basis 333
    Matrix representation for Goldstone boson fields 336
13.2 Effective lagrangians and anomalies 338
    Abelian anomaly 338
    The Wess–Zumino term 339
    Problems 341

14 Introduction to supersymmetry 342
14.1 Introduction 342
14.2 The supersymmetry algebra 343
Contents

14.3 Simple consequences of the supersymmetry algebra 346
14.4 Superspace and superfields for $N = 1$ supersymmetry 348
  Superspace 348
  Superfields 351
14.5 Supersymmetric lagrangian; Wess–Zumino model 353
14.6 Supergraphs and the non-renormalization theorem 356

Appendix A: Feynman rules and Feynman integrals 363
  Feynman rules for the $\lambda\Phi^4$ theory 363
  Feynman rules for QED 364
  Feynman rules for QCD 365
  Dirac algebra in $n$ dimensions 366
  Feynman parameters 367
  Feynman integrals in $n$ dimensions 367
  Gaussian integrals 368
  $\lambda$-parameter integrals 368
  Feynman integrals in light-like gauge $nA = 0, n^2 = 0$ 368
  Convention for the logarithm 369
  Spence functions 370

Appendix B: Elements of group theory 371
  Definitions 371
  Transformation of operators 372
  Complex and real representations 373
  Traces 374
  $\sigma$-model 375

Appendix C: Chiral, Weyl and Majorana spinors 377
  Definitions 377
  Lorentz transformation properties of Weyl spinors 379
  Free particle solutions of the massless Dirac equation 383
