CONTENTS

Prologue 3

**Part I History of the Search into the Origin of Life:
On the Shoulders of So Many 9**

- 1 From Myths to Logos to Stagnation 11
- 2 Experimental Biology of the Seventeenth Century 16
- 3 Systematic Biology, Doubts, and Uncertainties:
The Eighteenth Century 20
- 4 Demise and Resurrection of the Spontaneous Generation School:
Pasteur and Darwin 23
- 5 The Modern Era: Spontaneous Generation at the Molecular Level 39

Part II Central Features of Life as We Know it in Our Phylogenetic Tree 53

- 6 A General Morphological-Functional Characterization of the Cell 55
- 7 General Chemical, Biochemical, and Molecular
Biological Characterization 62
- 8 General Thermodynamic Considerations 78
- 9 Central Biochemical Molecules and Processes 86

10 Biological Conservatism and Continuity and the Phylogenetic Tree 99

11 Biological Life: A Multitude of Points of View 110

Part III The Arena 123

12 Our Universe, Galaxy, and Solar System 125

13 Planet Earth 132

**Part IV Beyond the Progenote: Rationale, Strategies, Scenarios,
and Models in the Search for the Origin of Life 141**

14 Basic Assumptions and Strategies 143

15 Clues and Speculations Based on Cosmology and Geology 152

16 Clues from Biology: Evolution, Conservatism, Continuity,
and Their Implications 172

17 Top-Down Reconstruction of Processes and Early Evolutionary
Stages without Specific Geochemical Considerations 189

18 Bottom-Up Reconstruction without Specific
Biogeochemical Conditions 227

19 Bottom-Up Biogeochemical Reconstruction: Starting
from Organic Scratch in the Absence of Minerals 233

20 Bottom-Up Biogeochemical Reconstruction: Minerals Functioning
as Scaffolds, Adsorbents, Catalysts, and Information Carriers 249

21 Bottom-Up Biogeochemical Reconstruction:
Mineral Involvement in Energy Production and Transfer 262

22 Possible Sites for Molecular Evolution Scenarios and their Rhythms 282

23 Artificial Life and Computer Modeling of Biogeochemical Scenarios 289

Epilogue 303
