Contents

Preface	v
Contributors	ix
1. Detecting Extinction in Sighting Data	1
<i>Andrew Solow and Thomas Helser</i>	
2. Inferring Threat from Scientific Collections: Power Tests and an Application to Western Australian <i>Acacia</i> Species	7
<i>Mark Burgman, Bruce R. Maslin, David Andrewartha, Marie R. Keatley, Chris Boek, and Michael McCarthy</i>	
3. Identifying the Ecological Correlates of Extinction-Prone Species: A Case Study of New Zealand Birds	27
<i>Brendan Moyle</i>	
4. Quantitative Methods for Modeling Species Habitat: Comparative Performance and an Application to Australian Plants	39
<i>Jane Elith</i>	
5. Risk Assessment of a Proposed Introduction of Pacific Salmon in the Delaware River Basin	59
<i>Paul T. Jacobson</i>	
6. Likelihood of Introducing Nonindigenous Organisms with Agricultural Commodities: Probabilistic Estimation	77
<i>Michael J. Firko and Edward V. Podleckis</i>	
7. "Best" Abundance Estimates and Best Management: Why They Are Not the Same	96
<i>Barbara L. Taylor and Paul R. Wade</i>	

8. Whaling Models for Cetacean Conservation	109
<i>Mark S. Boyce</i>	
9. Assessing Land-Use Impacts on Bull Trout Using Bayesian Belief Networks	127
<i>Danny C. Lee</i>	
10. Using Matrix Models to Focus Research and Management Efforts in Conservation	148
<i>Selina S. Heppell, Deborah T. Crouse, and Larry B. Crowder</i>	
11. Variability and Measurement Error in Extinction Risk Analysis: The Northern Spotted Owl on the Olympic Peninsula	169
<i>Lloyd Goldwasser, Scott Ferson, and Lev Ginzburg</i>	
12. Can Individual-Based Models Yield a Better Assessment of Population Variability?	188
<i>Yiannis G. Matsinos, Wilfried F. Wolff, and Donald L. DeAngelis</i>	
13. Potential of Branching Processes as a Modeling Tool for Conservation Biology	199
<i>Frédéric Gosselin and Jean-Dominique Lebreton</i>	
14. Role of Genetics in Conservation Biology	226
<i>Sabine S. Loew</i>	
15. Modeling Problems in Conservation Genetics Using Laboratory Animals	259
<i>Richard Frankham</i>	
16. Theoretical Properties of Extinction by Inbreeding Depression Under Stochastic Environments	274
<i>Yoshinari Tanaka</i>	
17. Mathematical Methods for Identifying Representative Reserve Networks	291
<i>Hugh Possingham, Ian Ball, and Sandy Andelman</i>	
Index	307
