CONTENTS

Preface ix

1. Regulatory Hardwiring: A Brief Overview of the Genomic Control Apparatus and its Causal Role in Development and Evolution

The Regulatory Apparatus Encoded in the DNA 2
   The Genes and Gene Regulatory Components of Animal Genomes 2
   Overview of Regulatory Architecture 7
Gene Regulatory Functions in Development 11
   The Regulatory Demands of Development 11
   Pattern Formation 13
   Terminal Differentiation 16
Genomic Regulatory Sequence and the Evolution of Morphological Features 18
   Regulatory Evolution, and Evolution in General 19
   Bilaterian Phylogeny 20

2. Inside the cis-Regulatory Module: Control Logic, and How Regulatory Environment is Transduced into Spatial Patterns of Gene Expression

Operating Principles for cis-Regulatory Systems that Mediate Developmental Specification Events 26
Spatial Repression in cis-Regulatory specification 28
   Two Very Different Examples of Similar Import 28
   cis-Regulatory Design for Autonomous Modular Function 35
   The Generality of Repression 41
Downstream of Specification 44
   Some Examples 45
3. Regulation of Direct Cell-Type Specification in Early Development

The Basic Package for Bilaterian Embryogenesis: Type 1 Specification Processes 64
Regulatory Mechanism in Territorial Specification of the Sea Urchin Embryo 66
The Definitive Territories of the Embryo 66
Early Transcriptional Activation of Cell Type-specific Genes 71
Initial Regulatory Processes 74
Multiple Inputs for Endomesoderm Specification 75
Regulatory Mechanisms Controlling Specification in Ascidian Embryos 81
Territorial Specification 81
Mechanisms and Pathways in Mesoderm Specification 85
Caenorhabditis elegans: The Genomic Apparatus for Endoderm Specification 92
Endoderm Specification 93
The Network of Zygotic cis-Regulatory Interactions Required for Endoderm Specification 96
Short Summary: Quality of Type 1 Regulatory Networks 101

4. The Secret of the Bilaterians: Abstract Regulatory Design in Building Adult Body Parts

The Evolutionary Significance of “Pattern Formation” 103
The First Step: Transcriptional Definition of the Domain of the Body Part 105
Morphological Pieces and Regulatory Subpatterns 110
Heart Parts 110
Forelimb and Hindlimb Buds 111
Transcriptional Domains in the Gut Endoderm 115
Patterns in the Developing Hindbrain 117
Appendage Parts and Transcriptional Patterns in *Drosophila* Imaginal Discs
