IT Architectures and Middleware
Second Edition

Strategies for Building Large, Integrated Systems

Acknowledgments xxix

CHAPTER 1 The Problem 1
1.1 Example: Moving to e-business 2
1.2 What is IT architecture? 5
1.3 Why is this different from what we did before? 9
1.4 Rewrite or evolve? 12
1.5 Who develops the architecture? 15
1.6 Summary 16

CHAPTER 2 The Emergence of Standard Middleware 17
2.1 Early days 17
2.2 Preliminaries 21
2.3 Remote procedure calls 23
2.4 Remote database access 25
2.5 Distributed transaction processing 26
2.6 Message queuing 29
2.7 Message queuing versus distributed transaction processing 31
2.8 What happened to all this technology? 34
2.9 Summary 35

CHAPTER 3 Objects, Components, and the Web 39
3.1 Using object middleware 41
3.2 Transactional component middleware 46
Contents

3.2.1 COM+ 48
3.2.2 EJB 49
3.2.3 Final comments on TCM 50

3.3 Internet Applications 51
3.4 Summary 57

CHAPTER 4 Web Services 59

4.1 Service concepts 59
4.2 Web services 65
4.3 Using Web services: A pragmatic approach 71
4.4 Summary 76

CHAPTER 5 A Technical Summary of Middleware 77

5.1 Middleware elements 77
   5.1.1 The communications link 77
   5.1.2 The middleware protocol 79
   5.1.3 The programmatic interface 81
   5.1.4 Data presentation 84
   5.1.5 Server control 84
   5.1.6 Naming and directory services 85
   5.1.7 Security 85
   5.1.8 System management 85
   5.1.9 Comments on Web services 86

5.2 Vendor architectures 86
   5.2.1 Vendor platform architectures 87
   5.2.2 Vendor-distributed architectures 88
   5.2.3 Using vendor architectures 89
   5.2.4 Positioning 90
   5.2.5 Strawman for user target architecture 90
   5.2.6 Marketing 90
   5.2.7 Implicit architectures 91

5.3 Middleware interoperability 92
5.4 Summary 97
CHAPTER 6 Using Middleware to Build Distributed Applications 99
6.1 What is middleware for? 99
   6.1.1 Support for business processes 100
   6.1.2 Information retrieval 103
   6.1.3 Collaboration 105
6.2 Tiers 106
   6.2.1 The presentation tier 106
   6.2.2 The processing tier 108
   6.2.3 The data tier 109
   6.2.4 Services versus tiers 111
6.3 Architectural choices 111
   6.3.1 Middleware bus architectures 112
   6.3.2 Hub architectures 114
   6.3.3 Web services architectures 116
   6.3.4 Loosely coupled versus tightly coupled 118
6.4 Summary 120

CHAPTER 7 Resiliency 123
7.1 Using backup servers 124
   7.1.1 Detecting failure 125
   7.1.2 Cleanup work in progress 126
   7.1.3 Activating the application 127
   7.1.4 Reprocessing "lost" messages 129
7.2 Dual active 130
7.3 Applying resiliency techniques 132
7.4 System software failure 134
7.5 Planned downtime 134
7.6 Application software failure 136
7.7 Developing a resiliency strategy 137
7.8 Summary 140
CHAPTER 8  Performance and Scalability  143
8.1  The un-slippery slope  144
8.2  Transaction processing  147
   8.2.1  Object interfaces  151
   8.2.2  Transactional component containers  151
   8.2.3  Two-phase commit  152
   8.2.4  Message queuing  153
   8.2.5  Using remote database access for real-time transactions  154
   8.2.6  Conclusions about real time  154
8.3  Batch  155
8.4  Is distribution an alternative?  156
8.5  Load balancing  158
8.6  Business intelligence systems  159
   8.6.1  Ad hoc database queries  159
   8.6.2  Data replication  160
8.7  Backups and recovery  161
8.8  Web services  162
8.9  Design for scalability and performance  165
8.10  Summary  166

CHAPTER 9  Systems Management  169
9.1  Functions and users  169
   9.1.1  Functional categories  169
   9.1.2  Inter-relationships and organization  170
9.2  From silos to distributed environments  173
9.3  Systems management technology  177
9.4  Putting it together  182
9.5  Summary  185

CHAPTER 10  Security  187
10.1  What security is needed  188
10.2  Traditional distributed system security  190
10.3  Web services security  194
10.4  Architecture and security  200
10.5  Summary  202
CHAPTER 11  Application Design and IT Architecture  205
  11.1  Problems with today's design approaches  206
        11.1.1  Design up front or as needed?  206
        11.1.2  The role of business rules  209
        11.1.3  Existing systems  210
        11.1.4  Reuse  211
        11.1.5  Silo and monolithic development  215
        11.1.6  The role of architecture  216
  11.2  Levels of design  217
  11.3  Reconciling design approaches  220
  11.4  Summary  221

CHAPTER 12  Implementing Business Processes  223
  12.1  What is a process?  225
  12.2  Business processes  228
  12.3  Information and processes  229
  12.4  Architecture process patterns  231
  12.5  Clarification and analysis  234
        12.5.1  Error Handling  236
        12.5.2  Timing  237
        12.5.3  Migration  237
        12.5.4  Flexibility  237
  12.6  Summary  238

CHAPTER 13  Integration Design  241
  13.1  The context for integration design  241
  13.2  Recovery and long transactions  243
  13.3  How to do integration design  245
  13.4  What makes a good integration design?  251
  13.5  Summary  254

CHAPTER 14  Information Access and Information Accuracy  257
  14.1  Information access  258
        14.1.1  Basic process information  261
        14.1.2  Process management  261
        14.1.3  Process improvement  262
16.1.3 Case 3: Developing a new application 303
16.1.4 Remarks on common mistakes 306
16.2 What does the future hold? 307
16.3 The key points to remember 310
  16.3.1 Middleware technology alternatives 310
  16.3.2 IT architecture guidelines 311
  16.3.3 Distributed systems technology principles 312
  16.3.4 Distributed systems implementation design 312

Appendix: Acronyms 315
