

Daniel Ammann

Ion-Selective Microelectrodes

Principles, Design and Application

With 153 Figures and 42 Tables

Springer-Verlag
Berlin Heidelberg New York Tokyo

Table of Contents

1 Introduction	1
2 Classification of Ion-Selective Electrodes	3
2.1 Types of Membranes	3
2.2 Electrode Arrangements	5
2.3 Concluding Remarks	7
3 Natural and Synthetic Neutral Carriers for Membrane Electrodes	9
3.1 Carriers as a Class of Ionophores	9
3.2 Molecular Aspects of the Ion-Selectivity of Neutral Carriers	13
3.2.1 General Remarks	13
3.2.2 Models for the Design of Neutral Carriers	13
3.2.2.1 Corey-Pauling-Koltun (CPK) Models	14
3.2.2.2 Electrostatic Models	14
3.2.2.3 Quantum Chemical Model Calculations	15
3.2.3 Selectivity-Determining Parameters	18
3.2.3.1 General Remarks	18
3.2.3.2 Binding Sites	18
3.2.3.3 Coordination Number and Cavity	19
3.2.3.4 Arrangement of the Binding Sites	19
3.2.3.5 Size of the Carrier	21
3.2.4 Properties of Neutral Carriers for Analytically Relevant Membrane Electrodes	21
3.2.4.1 Permselectivity	23
3.2.4.2 Ion- and Ligand-Exchange Kinetics	26
3.2.4.3 Lipophilicity	28
3.3 Highly Cation-Selective Neutral Carriers for Liquid Membrane Electrodes	30
3.4 Synthesis of Cation-Selective Neutral Carriers	33
3.5 Carriers for Anions	33
3.6 Concluding Remarks	40

4	Liquid Membrane Electrodes Based on Neutral Carriers	43
4.1	Parameters Determining Basic Properties of Solvent Polymeric Membranes	45
4.1.1	Membrane Composition	45
4.1.2	Membrane Solvent	47
4.1.3	Membrane Matrix	50
4.1.4	Membrane Additives	53
4.2	Ion-Selective Membrane Solutions for Microelectrodes	54
4.2.1	Composition of Membrane Solutions	54
4.2.2	Solvents for Membrane Solutions	55
4.2.3	Additives for Membrane Solutions	56
4.3	Concluding Remarks	61
5	Potentiometric Measurements of Ion Activities with Neutral Carrier-Based Electrodes	65
5.1	Cell Assemblies	65
5.2	The Membrane Potential	67
5.3	The Nernst and the Nicolsky-Eisenman Equations	68
5.4	Electrode Function and Detection Limit	69
5.5	Selectivity Factors	70
5.6	Activity Coefficients. The Debye-Hückel Formalism	73
5.7	Liquid-Junction Potentials. The Henderson Formalism	78
5.8	Stability and Reproducibility of EMF	81
5.9	Response Time	82
5.10	Lifetime	88
5.11	Anion Interference	92
5.12	Concluding Remarks	95
6	Construction of Liquid Membrane Microelectrodes	97
6.1	Glass Tubings	97
6.2	Micropipettes	100
6.3	Single- Versus Double- or Multi-Barrelled Microelectrodes	103
6.4	Electrode Bevelling	106
6.5	Tip Observation	108
6.6	Silanization	109
6.7	Electrode Filling	113
6.8	Electrode Shielding	114
6.9	Reference Microelectrodes	115
6.10	Concluding Remarks	117

7 Use of Neutral Carrier-Based Liquid Membrane Microelectrodes	119
7.1 Concepts of Use	119
7.2 Electrode Testing	122
7.3 Calibration and Evaluation	123
7.4 Impalement Criteria	126
7.5 Cell Damage	129
7.6 Cell Contamination	133
7.7 Tip Potentials and Electrical Shunts	140
7.8 Limitations Due to Selectivity	143
7.9 Concluding Remarks	152
8 General Aspects of Intracellular Measurements of Ions	153
8.1 The Intracellular Space as the Measuring Sample	153
8.2 Ion Activity, Concentration of Free Ions, Total Concentration	167
8.3 In vitro and in vivo Measurements	169
8.4 Organelles, Single Cells, Cell Population	172
8.5 Cell Compartmentation	176
8.6 Method Specific Properties of Intracellular Measurements of Ions	188
8.7 Concluding Remarks	193
9 Neutral Carrier-Based Liquid Membrane Microelectrodes	195
9.1 Intracellular Measurements of H^+	195
9.1.1 Distribution of Weak Acids and Weak Bases	195
9.1.2 Optical Techniques	197
9.1.3 ^{31}P Nuclear Magnetic Resonance Spectroscopy	199
9.1.4 Potentiometry	204
9.1.4.1 Survey of H^+ -Selective Microelectrodes	204
9.1.4.2 Available Liquid Membrane Microelectrodes	205
9.1.4.2.1 Microelectrodes Based on 3-Hydroxy-N-octyl- picolinamide	205
9.1.4.2.2 Microelectrodes Based on the Na^+ Salt of the Anti- biotic Nigericin	205
9.1.4.2.3 Microelectrodes Based on p-Octadecyloxy-m-chloro- phenyl-hydrazone-mesoxalonitrile	207
9.1.4.2.4 Microelectrodes Based on Tri-n-dodecylamine	207
9.1.5 Comparison of the Different Methods	213
9.1.6 Concluding Remarks	217
9.2 Intracellular Measurements of Li^+	217
9.3 Intracellular Measurements of Na^+	222
9.3.1 Techniques Used in Studies of Intracellular Na^+	222

9.3.2	Survey of Na ⁺ -Selective Microelectrodes	223
9.3.3	Available Liquid Membrane Microelectrodes	224
9.3.3.1	Microelectrodes Based on Potassium Tetrakis (<i>p</i> -chlorophenyl) borate	224
9.3.3.2	Microelectrodes Based on the Antibiotic Monensin	224
9.3.3.3	Microelectrodes Based on the Neutral Carrier ETH 227	226
9.3.3.4	Microelectrodes Based on the Neutral Carrier ETH 157	231
9.3.4	Concluding Remarks	232
9.4	Intracellular Measurements of K ⁺	233
9.4.1	Survey of K ⁺ -Selective Microelectrodes	233
9.4.2	Comparison of Properties of Classical Ion-Exchanger and Neutral Carrier-Based Microelectrodes	235
9.4.3	Concluding Remarks	240
9.5	Intracellular Measurements of Mg ²⁺	240
9.5.1	Mg ²⁺ Null Point for Permeabilized Cell Membranes	240
9.5.2	Metallochromic Indicators	242
9.5.3	³¹ P Nuclear Magnetic Resonance Spectroscopy	243
9.5.4	Potentiometry	245
9.5.4.1	Mg ²⁺ -Selective Carriers	245
9.5.4.2	Microelectrodes Based on the Neutral Carrier ETH 1117	247
9.5.5	Comparison of the Different Methods	252
9.5.6	Concluding Remarks	253
9.6	Intracellular Measurements of Ca ²⁺	253
9.6.1	Photoproteins	253
9.6.1.1	Origin of Bioluminescence	253
9.6.1.2	Availability of Photoproteins	254
9.6.1.3	Properties and Use of Photoproteins	255
9.6.1.4	Measurement of the Luminescence of Photoproteins	259
9.6.2	Metallochromic Indicators	260
9.6.2.1	Currently Used Indicators	260
9.6.2.2	Properties of the Indicators	260
9.6.2.3	Measurements with Metallochromic Indicators	263
9.6.3	Potentiometry	265
9.6.3.1	Survey of Ca ²⁺ -Selective Microelectrodes	265
9.6.3.2	Course of the Development of Optimized Neutral Carrier-Based Ca ²⁺ Microelectrodes	268
9.6.3.3	Properties of Currently Used Microelectrodes Based on the Neutral Carrier ETH 1001	273
9.6.3.4	Calibration of Ca ²⁺ -Selective Microelectrodes for Intracellular Studies	275

9.6.4 Comparison of the Different Methods	276
9.6.5 Concluding Remarks	277
9.7 Other Microelectrodes	279
10 Impact of Neutral Carrier Microelectrodes	281
10.1 Applications of Neutral Carrier-Based Microelectrodes	281
10.2 Animal Experimentation	296
10.3 Neurosciences. The Mind-Body Problem	298
11 References	305
12 Subject Index	339
