ROTATING MACHINERY AND VEHICLE DYNAMICS

presented at
THE 1991 ASME DESIGN TECHNICAL CONFERENCES —
13TH BIENNIAL CONFERENCE ON MECHANICAL VIBRATION AND NOISE
SEPTEMBER 22–25, 1991
MIAMI, FLORIDA

sponsored by
THE DESIGN ENGINEERING DIVISION, ASME

edited by

CONTENTS

ROTOR DYNAMICS

Observations of Subcritical Superharmonic and Chaotic Response in Rotordynamics
Fredric Ehrich ................................................................. 1

Analytical and Experimental Simulation of Loose Pedestal Dynamic Effects on a Rotating Machine
Vibrational Response
Pavel Goldman and Agnes Muszynska .................................. 11

Response of a Rotating Beam Subject to an Accelerating Force
A. Argento and R. A. Scott ................................................. 19

Spontaneous Sidebanding in High Speed Rotordynamics
Fredric Ehrich ................................................................. 25

Flexural Critical Speeds of a Two-Rotor Bearing System With One Overhang
C. Y. Chow, I-Chih Wang, and Rae Chow ............................ 35

Weight-Excited Vibrations of Rotating Curved Beams
Jörg Wauer ................................................................. 43

Nonlinear Steady-State Rotodynamic Analysis Using Transfer Coefficient Method
M. Kobayashi, S. Saito, and S. Yamauchi ............................. 51

A Slewing Motor-Beam System: Performance, Behavior and Dimensional Analysis
Jy-Jen F. Sah and Roger W. Mayne ..................................... 59

Virtual Balancing of Rotors Supported by Magnetic Bearings
H. Ming Chen and C. P. Roger Ku ..................................... 65

A Comparison of Experimental Results and Theoretical Predictions for the Rotordynamic Coefficients of Short (L/D = 1/6) Labyrinth Seals
Joseph M. Pelletti and Dara W. Childs ............................. 69

Identification and Resolution of a One-Times Slip Frequency Synchronous Motor Field Start Up Problem
F. H. Wolff and J. F. Hustak ............................................. 77

Active Vibration Control of Flexible Rotor Using $H^\infty$ Control Theory

Consistent Modeling of Rotating Timoshenko Shafts Subject to Axial Loads
S. H. Choi, C. Pierre, and A. G. Ulsoy ................................ 93

Rotor System Modeling With Foundation Matrices From Experimental Modal Data
Robert W. Stephenson and Keith E. Rouch ........................... 105

Modelling of an Elastic Disk With Finite Hub Motions and Small Elastic Vibrations With Application to Rotordynamics
George T. Flowers ..................................................... 115

Rotor Whirl Measurements on a Long Rotating Cylinder Partially Filled With Liquid
Jorgen Golding-Jorgensen .................................................. 127

ROTATING MACHINERY

Accurate Free Vibration Analysis for Rotating Shaft
Bo Suk Yang and Walter D. Pilkey ...................................... 133

Determination of Non-Conservative Coupling Loss Factors Between Rotating Machinery Components
J. M. Cuschieri, J. C. Sun, and F. Journeau ............................ 139

On the Dynamics of a Beam Rotating at Nonconstant Speed
Yii-Mei Huang and Ming-Shang Lin .................................. 147
Characteristic Study of Torsional Vibration on a Full Size Turbine-Generator Unit
Huang Xiuzhu, Zhang Xueyan, Sun Daixia, and Gong Qing ................................ 311
X. G. Song, T. X. Song, D. X. Xue, and B. Z. Li ........................................... 319

VEHICLE DYNAMICS

Semiactive Control of Vibrations in Automobiles
Junghsen Lieh and Imtiaz Haque ............................................................... 325
A Review of the Dynamics of Independently Rotating Wheel Systems for Railway Vehicles
S. Narayana Swamy, R. V. Dukkipati, and M. O. M. Osman ........................ 331
Integral and State Variable Feedback Controllers for Improved Performance in Automotive Vehicles
Mohamed M. ElMadany .............................................................. 339
A Study of Control Strategy for Vehicle Semi-Active Suspension System
Yiming Zhang and Ye Lin .............................................................. 347

EXTENDED ABSTRACTS

A Transfer Matrix Technique for Evaluating the Natural Frequencies and Critical Speeds of a Rotor With Multiple Flexible Disks
Fangsheng Wu and George T. Flowers ................................................................ 353
Application of Generalized Polynomial Expansion Method to Nonlinear Rotor Bearing Systems
Jon Li Hwang and Ting Nung Shiau .................................................. 355

Author Index ........................................................................ 357
