INTRODUCTION	1
CHAPTER 1. WEAK CONVERGENCE IN METRIC SPACES	7
1. Measures in Metric Spaces, 7 <i>Measures and Integrals, 7, Tightness, 9</i>	
2. Properties of Weak Convergence, 11 <i>Portmanteau Theorem, 11, Other Criteria, 14</i>	
3. Some Special Cases, 17 <i>Euclidean Space, 17, The Circle, 18, The Space R^∞, 19, The Space C, 19, Product Spaces, 20</i>	
4. Convergence in Distribution, 22 <i>Random Elements, 22, Convergence in Distri- bution, 23, Convergence in Probability, 24, Product Spaces, 26</i>	
5. Weak Convergence and Mappings, 29 <i>Continuous Mappings, 29, Main Theorem, 30, Integration to the Limit, 31, An Extension of Theorem 5.1, 33</i>	
6. Prohorov's Theorem, 35 <i>Relative Compactness, 35, The Direct Theorem, 37, The Converse, 40</i>	

7.	First Applications, 41	
	<i>Smooth Functions, 41, The Central Limit Theorem, 42, Characteristic Functions, 45, The Cramér-Wold Device, 48, Local and Integral Limit Theorems, 49, Weak Convergence on the Circle and Torus, 50</i>	
CHAPTER 2. THE SPACE C		54
8.	Weak Convergence and Tightness in C , 54	
	<i>Weak Convergence, 54, Tightness, 54, Random Functions, 57, Coordinate Variables, 60</i>	
9.	The Existence of Wiener Measure, 61	
	<i>Wiener Measure, 61, The Brownian Bridge, 64, Separable Stochastic Processes, 65</i>	
10.	Donsker's Theorem, 68	
	<i>The Theorem, 68, An Application, 70, A Necessary Condition for Tightness, 73, Another Proof of Donsker's Theorem, 73</i>	
11.	Functions of Brownian Motion Paths, 77	
	<i>Maximum and Minimum, 77, The Arc Sine Law, 80, The Brownian Bridge, 83</i>	
12.	Fluctuations of Partial Sums, 87	
	<i>Maxima, 87, Product Moments, 88, Applications, 89, Proof of Theorem 12.1, 91, Moments, 94, A Tightness Criterion, 95, Further Inequalities, 98</i>	
13.	Empirical Distribution Functions, 103	
CHAPTER 3. THE SPACE D		109
14.	The Geometry of D , 109	
	<i>The Space D, 109, The Skorohod Topology, 111, Completeness of D, 115, Compactness in D, 116, A Second Characterization of Compactness, 118, Finite-Dimensional Sets, 120</i>	
15.	Weak Convergence and Tightness in D , 123	
	<i>Finite-Dimensional Distributions, 123, Tightness, 125, Random Elements of D, 128, A Criterion for Convergence, 128, Criteria for</i>	

Existence, 130, *Other Criteria*, 133, *Separable Stochastic Processes*, 134

- 16. Applications, 137
Donsker's Theorem, 137, *Dominated Measures*, 139, *Empirical Distribution Functions*, 141
- 17. Random Change of Time, 143
Randomly Selected Partial Sums, 143, *Random Change of Time*, 144, *Applications*, 145, *Renewal Theory*, 148
- 18. The Uniform Topology, 150

CHAPTER 4. DEPENDENT VARIABLES 154

- 19. Diffusion, 154
A Characterization of Brownian Motion, 154, *Other Diffusion Processes*, 158
- 20. Mixing Processes, 166
 φ -Mixing, 166, *Inequalities for Moments*, 170, *Functional Central Limit Theorem*, 174, *Integrals in Place of Sums*, 178, *Nonstationarity*, 179
- 21. Functions of Mixing Processes, 182
Preliminaries, 182, *Functional Central Limit Theorem*, 184, *Applications*, 191, *Diophantine Approximation*, 193, *Nonstationarity*, 194
- 22. Empirical Distribution Functions, 195
 φ -Mixing Processes, 195, *Functions of φ -Mixing Processes*, 199
- 23. Martingales, 205
- 24. Exchangeable Random Variables, 208
Sampling, 208, *Exchangeable Variables*, 212

APPENDIX I. METRIC SPACES 215

Separability, 215, *Compactness*, 217, *Upper Semicontinuity*, 218, *The Space R^∞* , 218, *The Space C* , 220

APPENDIX II. MISCELLANY	222
<i>Measurability, 222, Change of Variable, 222, Tail Probabilities, 223, Scheffé's Theorem, 223, Subspaces, 224, Product Spaces, 224, Measurability of D_n, 225, Helly's Theorem, 226, Kolmogorov's Theorem, 228, Measurability of Some Mappings, 230, More Measurability, 232</i>	
APPENDIX III. THEORETICAL COMPLEMENTS	233
<i>The Problem of Measure, 233, Separable Measures, 234, The Topology of Weak Convergence, 236, Prohorov's Theorem, 239</i>
