Systems Analysis
and Simulation
1980
Proceedings of the International Symposium
held at Berlin (GDR) September 1—5, 1980

edited by Prof. Dr. Achim Sydow

Central Institute of Cybernetics and Information Processes
of the Academy of Sciences of the German Democratic Republic

Akademie-Verlag · Berlin 1980
# CONTENTS

Invited papers

</table>
1. Methods of systems analysis

1.1. Multilevel systems

N. D. Tai, M. Gössel, R. Straubel
On decomposition methods of large-scale systems for optimization problems 135

J. Doležal
Multilevel Stackelberg strategies for nonlinear differential systems 140

K. Kurpinski, M. Kozietulski
Optimal control of nonlinear dynamic processes in a two-layer structure 145

1.2. Reduction and control

S. V. Rao, D. P. Atherton
Near optimal regulators for large scale systems using routh approximant reduced order models 146

G. Otte
Reduction of complex linear models by the method of moments 151

W. F. Sakhartchenko, W. F. Shostak
Some aspects concerning the selection of control devices for optimization of complex systems 156

A. B. Krymov
The use of the fixed characteristic equation while analysing the linear system 157

G. Je. Puchov
Differential transformations of mathematical models 158

A. Swierniak
Some results on the performance deterioration in discrete-time optimum systems 159

1.3. Fuzzy systems

S. F. Bockliech, S. Mann
New approaches for fuzzy diagnosis 160

H. -P. Lipp
Fuzzy process control in a paper mill 161

J. Richardt
Fuzzy decision strategies for placing of elements 162

K. Wojcieszowski
Optimal tracking problem for a fuzzy model 163

1.4. Multiobjective optimization

J. Born, K. Bellmann
Parameter optimization in simulation models by means of evolution strategies 164

M. Grauer, G. Timmel, L. Pollmer
Comparison of some search algorithms for efficient points in polyoptimization problems 165

J. Ester, B. Schwarz
A generalized efficiency theorem and some practical consequences 170
1. Distributed parameter systems

A.S.I. Zinober
Self-adaptive near-optimal control of distributed parameter systems

A.S.I. Zinober, E. Huntley
The solution of linear time-dependent partial differential equations by the Laplace transform, finite difference and finite element techniques

I. Burger, S. Neuschl
Parallel digital models of continuous systems

W. Vermeiren, G. Otte
Some aspects of the state determination for soil moisture values

E.-G. WoSchni
Optimization of linear systems with dynamic redundancy and limitations

V.P. Belavkin
Systems analysis and decision making under quantum mechanical uncertainty

B.A. Berezovsky, A.V. Dolganov, M.V. Polyshshuk
On the adequateness of binary relations to the decision maker’s preference structure

L. Mónár, P. Navrat
Decision making under nonlinear heuristic function

D.P. Atherton, S.V. Rao
The synchronization of coupled oscillators

2. Model building and identification

2.1. Identification and estimation

Z. Sufleta
Identification of spatially-varying parameters in distributed systems using cubic splines

M. Kulisiewicz
Identification method of nonlinear dynamic system damping characteristics

A. Czerwinska
Identification methods for solving some physical fields

K.-H. Schmelovsky
Application of Bayes estimation for signal processing and control

I.N. Vuchkov, V.K. Tsochev, T.G. Dimov
Recursive instrumental variables estimation of time-varying parameters using moving window
2.2. Signal processing

J. Šafařík, Š. Neuschl
Model of n-pole with random process and its application to EEG signal analysis

A. Janiak
Problem of minimization of resources consumption and optimal control of their allocation with fixed time of realization of a complex of operations

F. Beichelt
Maximum availability of replaceable systems under uncertainty and cost restrictions

2.3. Physical systems

V.I. Anikeev, V.A. Kirillov
A multi-speed model of dispersed two-phase flow and its numerical analysis

J. Miličky, J. Čap
Selected problems from mathematical modelling of physical systems

2.4. Synthesis and networks

Combined adaptive models of multiconnective statitical objects and their application

A.V. Zaporozets
The principle of developed systems and its application for the synthesis of structure and parameters of complex dynamic systems

E.I. Mitroshin
Problems of synthesis the combined control systems and performance evaluation by hybrid computer complex

R. Schulze
Matrices-oriented topological and electrical descriptions of multiterminal networks

V.S. Tikhonov, V.E. Mosolov, A.J. Orlov
Increase of accuracy of difference schemes in the problems of flexible string motions

W. Krug
On the development of finite element models
3. Simulation systems

3.1. Simulation languages

B. Schmidt
The way ahead in discrete simulation.
A criterial assessment of language and packages for the simulation of discrete systems 229

L. Litz
Simulation of linear high order systems - a comparative study 230

P. Lorenz
Comparison of simulation languages: Objects, aspects, methods and results 235

E. Kindler
Experience with high level programming languages in systems analysis and simulation 236

3.2. Multiprocessors and simulation

J.a.Ja. Schlangen
Serial-parallel method for the solution of large systems of difference equations on homogeneous multiprocessor systems 237

R.G. Schönefeld
Parallel algorithms in simulation of systems with distributed parameters 242

A.G. Dodonov, S.P. Pelechov
The parallel simulating structures for the analysis of networks 243

3.3. Distributed parameter systems

M. Vlčková
Models for the analysis of the multiprocessor computer system performance 244

Z. Wiśniewski
Hybrid simulation of system with distributed parameters in ship structure mechanics 249

M. Kuczyński, M. Kuliszewski
Simulation of free boundary-value problems 254

R.A. Janbicki
On two methods for the solution of three-dimensional field theory problems by hybrid computation with minimized analog part 255

Z. Kolber
Hybrid computing system network of digital knots - digital computer for solving partial differential equations 256

V.E. Prokofiev
Analysis of distributed control systems by hybrid computers 257

G. Lippold, T. Reiher
Software for initial value problems of ordinary differential equations 258
3.4. Synthesis problems

D. Tavangarian, H.-O. Ide, K. Waldschmidt
Interactive design and simulation of active Tschebyseff-filter circuits with the SANDRA-Program system 261

D. Kliment, V. Eck
The simulation approach to the synthesis of a special class of the adaptive control algorithms 268

Z. Fryflomcz
Emulator's design 269

3.5. Hybrid simulation

K. Grandek, H. Stezano
Some aspects of iterative procedure optimization in hybrid systems "Digital computer - resistive network" type 270

J. Kunovsky
An autopatch in hybrid systems and in DDA systems 271

H. Scheffel
Software for hybrid systems with a small digital part 272

E.M. Wolska
The criterion of the convergence of iterative process for hybrid field analyser APH-600 273

K. Kabes
Efficient mode control of hybrid/analog processors 274

3.6. Networks and aggregated systems

A. Jajszczyk, J. Rajski
Simulation analysis of multistage switching networks 275

V.A. Tolok, E.V. Prokofiev
Computer simulation of the radio-engineering experiment 276

Z. Huzar
Hierarchy of computer system models 277

V.V. Kalashnikov, B.V. Nemchinov
Aggregative simulation system 282

V.I. Lutkov, N.Ja. Rives
Elaboration of elements of external program supply for aggregative modelling systems 289

L. Dietzsch, W. Gabrisch, K. Hartmann, W. Kohlert, U. Reichstein
Equation-oriented simulation of technological systems - methods, applications, experiences 293
4. Applications to industrial and technological systems

4.1. Chemical reactors

W. Bär
A simple linear model for controlling the reaction zone of a fixed-bed catalytic reactor

R. Sommer
Design of nonlinear control systems using a canonical form

W. Weiβ, P. Böhme
Numerical study of the effect of parameter changes on the nonstationary behaviour of a chemical reactor

V.I. Loginov, E.Ya. Lapiga
Identification and investigation of controllability of particle aggregation in agitation reactors

T. Dażkowski
Digital modelling the systems of continuous transport

R. Kabat
Simulation model of deposit exploitation

4.2. Energy systems

E. Kącki, T. Niewierowicz
A system of identification of industrial processes in the textile industry

D. Sames, F. Hafner, W. Hauenherm, W. Heeg, H. Heidenreich, G. König, HjO. Kretzschmar
Simulation and parameter identification for flow processes in natural and artificial gas deposits and sub-soil water reservoirs

E. Lerch
Digital simulation of the synchron machine by state space representation

W. Greschner, H.-D. Klabuhn, B. Matern
Some problems and results of systematic and interdisciplinary design of computer-aided situation recognition in energy networks

W. Herold, V. Warko
Model building and prediction of temporal behaviour of load in a energy network

4.3. Technological processes

E. Eitelberg
Low order lumped model of an ocean mining transport pipe
A.K. Mukhopadhyay
Measurement of lightning-induced arrester ground-current in power distribution system-results / lessons of field study 323

M. Sasu
Mathematical simulation methods of the switching off electric arc 324

J. Alder
The binary process-analysis - a mode of description of technological processes 325

Z. Dąbrowski
Invariant structure of systems for automatic projection 326

W. Sauer
Application of systems theory to discrete process of manufacture 327

M. Zecha
Application of methods of systems analysis for solutions of radiation and scattering problems 328

4.4. Thermical systems

E.P. Oyban, S.M. Chepaskina, B.D. Bileka, V.N. Klimenko
Model approach to the design of air cooling systems and identification of boundary conditions 331

R.G. Krukovskij
Numerical methods for inverse problems of thermoconduction in thermal object parameter identification 336

J. Kuneš, J. Bartík
Special hybrid simulation system and simulators of industrial thermal processes 342

Yu.M. Matsevity, V.A. Malyarenko, O.S. Tsakanyan
Hybrid modelling of energy machines thermal condition 347

V. Hamata
Simulation of dynamic systems with electromechanical energy-conversion by sudden changes of forcing function 348

M.L. Yedemsky
Artificial heart control problems: systems analysis 349

G.S. Yablonskii, V.I. Bykov, V.A. Yevstigneev
Structural analysis of the kinetic equations of complex chemical reactions 350

L. Janke
Suboptimal control by application of the model reference adaptive control 351

5. Applications to traffic systems

5.1. Service systems

E. Ferenstein, K. Wydro
A method of dynamical adapting of the service system to the varying arrival streams 352

J. Paczynski, A. Winnicki
Optimization of variable structure telephone networks 357
A. Winnicki, E. Szmidt
Simulation of controlled telecommunication networks 358

J. Stokłosa
Simulation of processes on \((\alpha, k)\)-machines 359

J. Kwaśnikowski
Suboptimal long distance train operation 360

5.2. Traffic systems
B. Posch, G. Schmidt
Automatic merging of two strings of vehicles - analysis and simulation 361

D. E. Böhm
A treatment of urban transportation problems by means of systems analysis 368

H. D. Modrow, W. Dauscha, A. Neumann
On constructing cyclic control 373

A. Neumann, R. Henschel
On a hierarchical computation of coordinated signal settings for urban traffic control 379

G. Di Blasio
Kinetic equations for vehicular traffic 380

K. Rudzinska, H. Kormanski
Fuel optimal driving strategy of vehicle 385

G. Schulze
Application of models to solve problems of planning and controlling in seaports 386

6. Applications to environmental, ecological and biological systems

6.1. Biological systems
W. Düchting, G. Dehl
Computer simulation of spatial tumor growth 387

J. Potůček, M. Hájek, V. Brodan
Parameter estimation of models of biological systems 396

U. Bendel
Systemtheoretical description of striated muscle mechanics 401

F. Hauser
Simple models of continuous transport processes 402

M. Kotva
General method of multicompartmental models 403

M. Schauer
A simplification of certain stiff differential equations 404

6.2. Environmental and agricultural systems
B. Hau, J. Kranz
A comparison of the structure of plant disease simulators 405

V. Wenzel, A. Knijnenburg, E. Matthäus
Simulation system SONCHES 410
6.3. Theory of ecological systems

W. Ebeling
A stochastic evolutionary model of biological and technological processes 426

W. Mende
Hyperbolic growth and hierarchical growth models 427

A.S. Isaev, R.G. Khlebopros, L.V. Nedorezov
The nonlinear theory of the forest insect number dynamics 428

L.V. Nedorezov
Axiomatical approach to the modelizing of the populations dynamics 433

V.V. Galitsky
The plane geometrical structure as a control factor of the plant community productivity 434

6.4. Aquatic ecosystems

V.I. Belyaev
The analysis of mathematical model of complexity ecological system of marine shelf 436

U. Vietinghoff, E. Matthäus
Analysis of phytoplankton growth in the chain of shallow bays “Boddenkette” 441

A.H. Gnauck
Modelling the water quality of limnic ecosystems 442

6.5. Water systems

F.J. Kraus, U. Schreiber, A. Schröder
Modelling and simulation of an urban waste water transportation system 443

Chr. Thümmler
On-line multilayer control for the management of a water resources system 448

A. Bargieža, U. Pociask
Optimization of the work of the chosen hydraulic objects’ set 453

St. Irmecher
Examination of the profit-expenditure-relation for stochastic optimization of a dam 454

J. Turčan, J. Šafařík
Hydrological model YETI for snowmelt simulation 456

Ya.A. Pachepsky
Mathematical models of melioration effect on soils and landscapes 457
7. Applications to global and regional systems

7.1. Energy problems

H. Hörz
Remarks on methodological problems of social systems analysis 458

L. Schrattenholzer
An analysis of the global energy system in the next 50 years 463

B. Wutke, A. Langner
Multilevel hierarchy in planning of complex energy supply of regions 468

R. Böttner, H. Klare
Modelling of energy conversion systems by means of hierarchical decomposition of large dynamic linear programming problems 473

7.2. Social systems analysis

J. Gutenbaum
Mathematical modelling applied to regional management and planning 474

K. Ivanov
Computation of optimal controls for global economic models 480

U. Hajdrowska-Mikołajczak
On some system attempt to study labour productivity 485

A.N. Borisov, V.A. Popov
Truth evaluation of utility function in decision-making 486

R.A. Müller
Adaptive stochastic state space models for population forecasting 487

L. Błach, R. Waśniowski
Systems analysis in futures research 492

List of Authors 493
