# Table of Contents

**Preface** ................................................. v

**Section 1: Instruction Execution Characteristics** ............................................. 1

Understanding Execution Behavior of Software Systems .............................. 8  
*J.C. Browne (Computer, July 1984, pages 83–87)*

The Nature of General-Purpose Computations ........................................... 13  
*M. Katevenis (Reduced Instruction Set Computer Architecture for VLSI, edited by M. Katevenis, 1985, pages 9–41)*

Empirical Evaluation of Some Features of Instruction Set Processor Architectures ........................................... 35  
*A Lunde (Communications of the ACM, March 1977, pages 143–153)*

Implications of Structured Programming for Machine Architecture ........... 46  

**Section 2: RISC Overview** ................................................. 57

Reduced Instruction Set Computer Architecture ......................................... 58  

RISC: Back to the Future ................................................. 76  
*C.G. Bell (Datamation, 1986)*

**Section 3: Optimized Register Usage** ................................................. 83

Register Allocation via Coloring .................................................................. 88  

Register Allocation by Priority-Based Coloring ........................................... 98  

Strategies for Managing the Register File in RISC .................................... 109  

Analyzing Multiple Register Sets ................................................................. 122  

**Section 4: RISC Compilers** ................................................. 131

Compilers for the New Generation of Hewlett-Packard Computers .......... 132  

Compiling for RT PC ROMP ........................................................................ 146  
*M.E. Hopkins (IBM RT Personal Computer Technology, 1986, pages 76–82 and 132–137)*

Optimizing Compilers for SPARC ................................................................. 160  
*S.S. Muchnick (Sun Technology, Summer 1988, pages 64–77)*

**Section 5: Example Systems** ................................................. 175

A Perspective on the 801/Reduced Instruction Set Computer ................. 176  
*M.E. Hopkins (IBM Systems Journal, Volume 26, Number 1, 1987, pages 107–121)*
