Contents

<i>Frequently Used Symbols</i>	xiii
<i>Preface</i>	xv
Chapter I Fundamental Concepts	1
1. Fundamental Equations of Diffusion	2
2. Useful Solutions of the Diffusion Equation	6
A. Diffusion of Gases Into and Out of Solids	6
B. Diffusion Into a Semi-Infinite Solid from a Thin Planar Source	12
C. Diffusion Between Semi-Infinite Sources	15
D. The Diffusion Coefficient and Random Walks	18
Problems	22
Additional General References	23
Chapter II Point Defects in Elemental Crystalline Substances	25
1. Experimental Methods	28
A. Quenching	28
B. Dilatation and Lattice Parameters	31
C. Positron Annihilation	32

2. Thermodynamics of Simple Defects	39
A. Single Lattice Vacancies	39
B. Frenkel Pairs	42
C. Divacancies	42
D. Impurity-Vacancy Complexes	45
E. Dislocation-Point Defect Complexes	49
Problems	51
Additional General References	52
Chapter III Mechanisms of Diffusion	53
1. Defect Mechanisms	53
A. Interstitial Mechanism	53
B. Interstitialcy Mechanism	55
C. Crowdion Mechanism	56
D. The Vacancy Mechanism	57
2. The Temperature Dependence of Diffusion	60
3. The Correlation Coefficient	66
4. The Pressure Dependence of Diffusion	73
Problems	76
Additional General References	77
Chapter IV Diffusion in Metals and Alloys	79
1. Diffusion in Pure Metals	79
2. Diffusion in Alloys	81
3. Diffusion in Very Dilute Alloys	88
A. Impurity-Vacancy Binding Energies	88
B. Interstitial Diffusion	92
C. Mixed Vacancy-Interstitial Control	93
4. Vacancy Correlation in Concentrated Alloys	96
5. Diffusion in Ordering Alloys	101
A. Self Diffusion in Terms of Linearly Averaged Parameters	102
B. The Temperature Dependence of Diffusion in an Ordering Alloy System	103
Additional General References	110
Chapter V Diffusion in Ionic Crystals	111
1. Defects in Ionic Crystals	111
2. Thermodynamics of Defects in Ionic Crystals	116
3. Ionic Conductivity	120
4. Diffusion in an Electric Field	123
5. Fast Ionic Transport	125

Problems	132
Additional General References	133
Chapter VI Less Common Modes of Diffusion	135
1. Divacancy Diffusion	135
2. Pipe Diffusion	139
3. Thermomigration–Diffusion in a Thermal Gradient	145
4. Electromigration	148
5. Surface Diffusion	151
6. Direct Interchange	156
Problems	158
Additional General References	158
Chapter VII The Isotope Effect	161
1. General Considerations	162
2. Interstitial Diffusion	165
3. Quantum Effects	167
4. The Isotope Effect for Vacancy Diffusion	168
Problems	172
Additional General References	172
Chapter VIII Diffusion in a Concentration Gradient	173
The Chemical Diffusion Coefficient	173
1. Boltzmann-Matano Method	173
2. Relation Between the Inter and Chemical Diffusion Coefficients	177
3. Relation Between Chemical and Tracer Diffusion Coefficients	181
Problems	184
Additional General References	185
Chapter IX Diffusion in Semiconductors	187
1. Thermodynamics of Point Defects in Semiconductors	187
2. Diffusion in Germanium	195
3. Diffusion in Silicon	197
A. Self-Diffusion in Silicon	198
B. Diffusion of Group III and Group V Impurities in Si	200
C. Diffusion of Gold in Silicon	202
D. Diffusion in Amorphous Silicon	206
4. Diffusion in NiO	208
Problems	213
Additional General References	215

Chapter X Kinetics of Defect Reactions	217
1. Defect Annealing and Recombination	217
2. Methods of Analysis of Kinetic Data	224
A. The Method of "Cross-Cuts"	225
B. The Method of the Ratio of Slopes	227
C. The Constant Rate of Heating Method	228
3. Trapping Effects	234
A. Trapping Effects—Diffusion in Graphite	240
B. Annealing of Radiation Damaged Copper	245
4. Radiation Enhanced Diffusion	247
Problems	251
Additional General References	253
Chapter XI Experimental Methods	255
1. Radioactive Tracers	255
2. Radioactivity Methods Based Upon Activation Analysis	259
3. Ion Beam Microprobes	262
4. Anelastic Methods—Theory	266
A. The Gorsky Effect	268
B. Snoek Relaxation	269
5. Anelastic Methods—Experimental	274
6. Diffusion and Second Stage Creep	278
7. Field Ion Microscopy	283
Problems	285
Additional General References	286
Chapter XII Solid State Reactions	287
1. Reactions of Metal Interfaces	287
2. Multiple Component Scales	293
3. Sintering	296
4. Precipitation	302
5. Empirical Estimations of the Diffusion Coefficient	309
Problems	313
Additional General References	313
Appendix A	
Random Walk and the Diffusion Coefficient	315
Appendix B	
Deconvolution of Positron Annihilation Spectra Derived from Trapped and Free Electrons	321

Contents	xi
Appendix C Derivation of the Vineyard Equations	325
Appendix D Derivation of Equation (3.24)	331
Appendix E The Matrix Method of Calculating the Correlation Coefficient	335
Appendix F Anelastic Effects—Measures of Internal Friction	341
Appendix G Anelastic Effects—Relation to Relaxation Time	347
<i>Name Index</i>	349
<i>Subject Index</i>	355
