Table of contents

1 General characteristics of ions ........................................... 7
   1.1 Monatomic ions ..................................................... 7
   1.2 Multiatomic and complex ions .................................... 22
   1.3 The concept of the stoichiometric mixture of ions .............. 28

2 Methods for the thermodynamic description of ions ................. 29
   2.1 The choice of standard and reference states for the thermodynamic functions .............................................. 29
   2.2 Thermodynamic characteristics of ions .......................... 48
   2.3 Physical meaning of the thermodynamic characteristics of ions in solutions ..................................................... 92

3 Thermodynamic characteristics of processes of solvation of ions .... 97
   3.1 Solvation of ions .................................................... 98
   3.2 Changes of thermodynamic characteristics during solvation .... 117
   3.3 Entropy characteristics of the influence of the medium on the state of a solute in solutions ........................................ 131

4 Thermodynamics of structural changes in the solvent during solvation of ions 140
   4.1 Properties and structural peculiarities of liquid solvents and solutions ..................................................... 141
   4.2 Thermodynamic characteristics of structural peculiarities of solvents ..................................................... 167
   4.3 Entropy characteristics of solvent structural changes during solvation of ions ..................................................... 172

5 Thermodynamics of dissolution of ionic crystals ..................... 195
   5.1 The change of Gibbs free energy and its constituents on dissolution of ionic crystals .......................................... 195
   5.2 Temperature coefficients of $\Delta H_{\text{soln}}$ and structural constituents of the thermodynamic characteristics of dissolution of ionic crystals .................. 223
   5.3 Thermodynamic characteristics of dissolution of salts in concentrated solutions .............................................. 238
# Table of contents

6 Thermodynamic characteristics of reactions in solution .......................................................... 250
6.1 Ionic reaction equilibria ........................................................................................................... 251
6.2 Solvation processes and chemical reactions in solutions ....................................................... 262
6.3 The influence of additives ..................................................................................................... 264
