# Linear Models for Multivariate, Time Series, and Spatial Data

With 40 Illustrations

Springer-Verlag  
New York Berlin Heidelberg London  
Paris Tokyo Hong Kong Barcelona

# Contents

	<b>Preface</b>	<b>vii</b>
<b>I</b>	<b>Multivariate Linear Models</b>	<b>1</b>
1	Estimation . . . . .	3
2	Testing Hypotheses . . . . .	9
3	One-Sample Problems . . . . .	24
4	Two-Sample Problems . . . . .	30
5	One-Way Analysis of Variance and Profile Analysis . . . . .	33
6	Growth Curves . . . . .	49
7	Testing for Additional Information . . . . .	60
8	Additional Exercises . . . . .	63
<b>II</b>	<b>Discrimination and Allocation</b>	<b>69</b>
1	The General Allocation Problem . . . . .	71
2	Equal Covariance Matrices . . . . .	75
3	Linear Discrimination Coordinates . . . . .	89
4	Additional Exercises . . . . .	104
<b>III</b>	<b>Principal Components and Factor Analysis</b>	<b>107</b>
1	Properties of Best Linear Predictors . . . . .	108
2	The Theory of Principal Components . . . . .	114
3	Sample Principal Components . . . . .	121
4	Factor Analysis . . . . .	129
5	Additional Exercises . . . . .	143
<b>IV</b>	<b>Frequency Analysis of Time Series</b>	<b>147</b>
1	Stationary Processes . . . . .	148
2	Basic Data Analysis . . . . .	150
3	Spectral Approximation of Stationary Time Series . . . . .	157
4	The Random Effects Model . . . . .	162
5	The Measurement Error Model . . . . .	165
6	Linear Filtering . . . . .	176
7	The Coherence of Two Time Series . . . . .	182

8	Fourier Analysis . . . . .	187
9	Additional Exercises . . . . .	188
<b>V</b>	<b>Time Domain Analysis</b>	<b>194</b>
1	Correlations . . . . .	194
2	Time Domain Models . . . . .	197
3	Time Domain Prediction . . . . .	207
4	Nonlinear Least Squares . . . . .	217
5	Estimation . . . . .	221
6	Model Selection . . . . .	233
7	Seasonal Adjustment . . . . .	243
8	The Multivariate State-Space Model and the Kalman Filter	248
9	Additional Exercises . . . . .	259
<b>VI</b>	<b>Linear Models for Spatial Data: Kriging</b>	<b>262</b>
1	Modeling Spatial Data . . . . .	263
2	Best Linear Unbiased Prediction of Spatial Data: Kriging .	267
3	Prediction Based on the Semivariogram: Geostatistical Kriging . . . . .	270
4	Measurement Error and the Nugget Effect . . . . .	273
5	The Effect of Estimated Covariances on Prediction . . . . .	276
6	Models for Covariance Functions and Semivariograms . . .	287
7	Estimation of Covariance Functions and Semivariograms . .	292
