Abbreviated Titles of Periodicals

PART I: THE CORRESPONDENCE PRINCIPLE

Introduction

1 On the Quantum Theory of Line Spectra
2 Development of the Correspondence Principle
3 Formulation of the Correspondence Principle
4 On the Quantum Theory of Line Spectra, Parts I and II
5 On the Quantum Theory of Line Spectra, Part III (1918, 1922)
6 On the Quantum Theory of Line Spectra, Part IV
7 Correspondence connected with the writing and completion of the work On the Quantum Theory of Line Spectra
8 Problems of the Atom and the Molecule. Lecture delivered in Leiden (25 April 1919)
9 Meetings with Sommerfeld in Lund and Copenhagen (September 1919)
10 On the Program of the Newer Atomic Physics (2 Dec 1919)
11 On the Interaction between Light and Matter (13 Feb 1920)
12 On the Series Spectra of the Elements (27 April 1920)
13 Landé's lecture before the Physical Society of Copenhagen (October 1920)
14 Dedication of the Institute for Theoretical Physics (3 March 1921)
15 Preface to the German translation of Bohr's early papers on atomic structure (1921)
16 On the Question of the Polarization of Radiation in the Quantum Theory (1921)
17 Application of the Quantum Theory to Atomic Problems. Report to the Third Solvay Council (April 1921)
# CONTENTS

18 Application of the Quantum Theory to Atomic Problems in General (1921) 36
19 The Effect of Electric and Magnetic Fields on Spectral Lines. Seventh Guthrie Lecture (1922) 37
20 On the Selection Principle of the Quantum Theory (1922) 38
21 The Difference between the Series Spectra of Isotopes (1922) 38
22 On the Application of the Quantum Theory to Atomic Structure. I. The Fundamental Postulates (1923, 1924) 39
23 On the Application of the Quantum Theory to Atomic Structure. II. Theory of the Series Spectra (1923) 41
24 British Association Meeting in Liverpool (1923) 44
25 Lectures in America (1923) 45

I First Indication of the Generalization of the Correspondence Principle. Draft 47
II Unused Page Proofs to "On the Quantum Theory of Line Spectra", Part II (1918) 53
III On the Quantum Theory of Line Spectra, Parts I–III (1918–1922) 65
IV On the Quantum Theory of Line Spectra, Part IV (fragmentary drafts) 185
V Problems of the Atom and the Molecule (1919) 201
VI Speech of Appreciation to Sommerfeld (1919) 217
VII On the Program of the Newer Atomic Physics (1919). Translation of fragments 221
VIII On the Interaction between Light and Matter (1920). Translation 227
IX On the Series Spectra of the Elements (1920). Translation 241
X Dedication of the Institute for Theoretical Physics (1921) 283
  Danish text 284
  Translation 293
XI Foreword to German Translation of Early Papers on Atomic Structure (1921) 303
  German text 308
  Translation 325
XII On the Question of the Polarization of Radiation in the Quantum Theory 339
  Zur Frage der Polarisation der Strahlung in der Quantentheorie (1921) 341
  Translation 350
XIII Report to Third Solvay Council (1921) 357
  1 The Third Solvay Council: Atoms and Electrons (1921) 359
  2 On the Application of the Quantum Theory to Atomic Problems, by N. Bohr 364
  3 Supplementary Report by P. Ehrenfest and Discussion of Bohr's and Ehrenfest's Reports 381
XIV Application of the Quantum Theory to Atomic Problems in General (1921) 397
XV The Effect of Electric and Magnetic Fields on Spectral Lines (1922, 1923) 415
XVI On the Selection Principle of the Quantum Theory (1922) 447
XVII The Difference between the Series Spectra of Isotopes (1922) 453
XVIII On the Application of the Quantum Theory to Atomic Structure. Part I: The Fundamental Postulates (1924) 455
CONTENTS

XIX  On the Application of the Quantum Theory to Atomic Structure. Part II: Theory of the Series Spectra (1923)
     1 Original German manuscript  501
     2 Translation  532

XX  Fragmentary Manuscripts (1923–24)
     1 Die Gesetze der Serienspektren (1924)  560
         Translation  563
     2 Atombau und Korrespondenzprinzip (1924)  566
         Translation  567
     3 Problems of the Atomic Theory (1923 or 1924)
         Translation from Danish draft  569

XXI  British Association Meeting in Liverpool (1923)
     1 The Correspondence Principle  576
     2 Theory of Series Spectra  578

XXII Notes to the Silliman Lectures (1923)  581

PART II: SELECTED CORRESPONDENCE 1917–1923

  Introduction  605
  P. Debye  606
  P. Ehrenfest  608
  A. Einstein  633
  P. S. Epstein  636
  J. Franck  643
  A. Haas  646
  W. Heisenberg  648
  H. A. Kramers  651
  A. Landé  663
  H. A. Lorentz  665
  C. W. Oseen  669
  W. Pauli  672
  M. Planck  676
  O. W. Richardson  678
  A. Rubinowicz  679
  E. Rutherford  681
  A. Sommerfeld  685
