CONTENTS

<i>Preface</i>	vii
<i>Contents of Volume I</i>	xvii

Chapter 9. Upper and Lower Bounds via Duality

9.1. Introduction	1
9.2. Guiding Idea	2
9.3. A Simple Identity	2
9.4. Quadratic Functional: Scalar Case	3
9.5. $\min_u J = \max_v H$	5
9.6. The Functional $\int_0^T [u'^2 + g(u)] dt$	5
9.7. Geometric Aspects	7
9.8. Multidimensional Case	8
9.9. The Rayleigh–Ritz Method	9
9.10. Alternative Approach	10
9.11. $J(u) = \int_0^T [u'^2 + \varphi(t)u^2] dt$; General $\varphi(t)$	12
9.12. Geometric Aspects	13
Miscellaneous Exercises	14
Bibliography and Comments	19

Chapter 10. Caplygin's Method and Differential Inequalities

10.1. Introduction	21
10.2. The Caplygin Method	22
10.3. The Equation $u' < a(t)u + f(t)$	22
10.4. The Linear Differential Inequality $L(u) < f(t)$	24
10.5. Elementary Approach	24
10.6. An Integral Identity	25
10.7. Strengthening of Previous Result	26
10.8. Factorization of the Operator	26
10.9. Alternate Proof of Monotonicity	27
10.10. A Further Condition	28
10.11. Two-point Boundary Conditions	29
10.12. Variational Approach	29
10.13. A Related Parabolic Partial Differential Equation	31
10.14. Nonnegativity of $u(t, s)$	31
10.15. Limiting Behavior	33
10.16. Limiting Behavior: Energy Inequalities	34
10.17. Monotonicity of Maximum	36
10.18. Lyapunov Functions	36

10.19. Factorization of the n th-order Linear Operator	39
10.20. A Result for the n th-order Linear Differential Equation	42
10.21. An Example	42
10.22. Linear Systems	43
10.23. Partial Differential Equation—I	44
10.24. Partial Differential Equation—II	44
Miscellaneous Exercises	44
Bibliography and Comments	46

Chapter 11. Quasilinearization

11.1. Introduction	50
11.2. The Riccati Equation	51
11.3. Explicit Representation	52
11.4. Successive Approximations and Monotone Convergence	52
11.5. Maximum Interval of Convergence	54
11.6. Dini's Theorem and Uniform Convergence	54
11.7. Newton–Raphson–Kantorovich Approximation	54
11.8. Quadratic Convergence	55
11.9. Upper Bounds	56
11.10. $u' = g(u, t)$	57
11.11. Random Equation	57
11.12. Upper and Lower Bounds	58
11.13. Asymptotic Behavior	59
11.14. Multidimensional Riccati Equation	61
11.15. Two-point Boundary Value Problems	62
11.16. Maximum Interval of Convergence	64
11.17. Quadratic Convergence	65
11.18. Discussion	66
11.19. Computational Feasibility	67
11.20. Elliptic Equations	69
11.21. Parabolic Equations	69
11.22. Minimum and Maximum Principles	70
Miscellaneous Exercises	71
Bibliography and Comments	72

Chapter 12. Dynamic Programming

12.1. Introduction	75
12.2. Multistage Processes	76
12.3. Continuous Version	76
12.4. Multistage Decision Processes	77
12.5. Stochastic and Adaptive Processes	78
12.6. Functional Equations	78
12.7. Infinite Stage Process	80
12.8. Policy	81
12.9. Approximation in Policy Space	82
12.10. Discussion	83
12.11. Calculus of Variations as a Multistage Decision Process	83
12.12. A New Formalism	85
12.13. The Principle of Optimality	87

12.14. Quadratic Case	88
12.15. Multidimensional Case	89
12.16. Computational Feasibility	91
12.17. Stability	91
12.18. Computational Feasibility: General Case—I	93
12.19. Computational Feasibility: General Case—II	95
12.20. The Curse of Dimensionality	95
12.21. Constraints	95
12.22. Two-point Boundary Value Problems	96
12.23. Rigorous Aspects	96
12.24. The Equation $u_t = \varphi(x, u_x)$	98
12.25. The Equation $u_t = \varphi(x, u_{xx})$	99
12.26. Generalized Semigroup Theory and Nonlinear Equations	100
12.27. Ill-conditioned Systems	101
12.28. Adaptive Polygonal Approximation	101
12.29. Partial Differential Equations	104
12.30. Successive Approximations to Reduce Dimensionality	105
Miscellaneous Exercises	106
Bibliography and Comments	112

Chapter 13. Invariant Imbedding

13.1. Introduction	116
13.2. Maximum Altitude	117
13.3. Functional Equation Approach	117
13.4. Invariant Imbedding	119
13.5. Inhomogeneous Medium	119
13.6. Computational Aspects	120
13.7. Two-point Boundary Value Problems	121
13.8. A Simple Transport Process	122
13.9. Invariant Imbedding: Particle Counting	123
13.10. Perturbation Analysis	124
13.11. Linear Systems	127
13.12. Linear Transport Process	127
13.13. Reflection and Transmission Matrices	130
13.14. Invariant Imbedding	130
13.15. Equivalence of Analytic Formulations	132
13.16. Conservation Relation	133
13.17. Internal Fluxes	134
13.18. Asymptotic Behavior	135
13.19. Multidimensional Case	137
13.20. Asymptotic Phase	138
13.21. Wave Propagation	140
13.22. The Bremmer Series	142
13.23. Localization Principles	143
13.24. Localization for Wave Motion	144
13.25. The Classical Solution to Wave Propagation through an Inhomogeneous Medium	144
13.26. Riccati Equation	146
13.27. Invariant Imbedding	146
13.28. Functional Equations	147

13.29. Random Walk	148
13.30. Classical Formulation	149
13.31. Invariant Imbedding	150
13.32. Determination of $u(a, a + 1)$	150
Miscellaneous Exercises	152
Bibliography and Comments	153

Chapter 14. The Theory of Iteration

14.1. Introduction	155
14.2. Iteration	156
14.3. Abel–Schröder Functional Equation	157
14.4. Formal Analysis	157
14.5. Koenig’s Representation	158
14.6. Majorization	159
14.7. Refined Asymptotic Behavior	161
14.8. Stochastic Effects	161
14.9. Stochastic Iteration	162
14.10. Stochastic Matrices	163
14.11. Random Initial Values	165
14.12. Imbedding	166
14.13. Differential Equations	167
14.14. Associated Partial Differential Equation	168
14.15. Multidimensional Case	169
14.16. A Counterexample	170
14.17. Statement of Result	172
14.18. Differential Equations	172
14.19. Commensurable Characteristic Roots	174
14.20. Two-point Boundary Values	175
14.21. Constant Right-hand Incident Flux	176
14.22. Associated Partial Differential Equation	177
14.23. Branching Processes	178
14.24. Closure of Operations	179
14.25. Number of Arithmetic Operations	180
Miscellaneous Exercises	181
Bibliography and Comment	188

Chapter 15. Infinite Systems of Ordinary Differential Equations and Truncation

15.1. Introduction	191
15.2. Ordinary Differential Equations and Difference Methods	192
15.3. Stability Considerations	193
15.4. Round-off Error	193
15.5. Linear Partial Differential Equations	195
15.6. Partial Discretization	197
15.7. Preservation of Properties	197
15.8. Orthonormal Expansions and Infinite Systems	199
15.9. Truncation	200
15.10. Associated Equation	201
15.11. Discussion of Convergence of $u^{(N)}$	202
