CONTENTS

Preface vii

Chapter 1. Real and Complex Numbers. Elementary Algebra 1

1.1. Introduction. The Real-number System 2
1.2. Powers, Roots, Logarithms, and Factorials. Sum and Product Notation 4
1.3. Complex Numbers 7
1.4. Miscellaneous Formulas 10
1.5. Determinants 12
1.6. Algebraic Equations: General Theorems 15
1.7. Factoring of Polynomials and Quotients of Polynomials. Partial Fractions 19
1.8. Linear, Quadratic, Cubic, and Quartic Equations 22
1.9. Systems of Simultaneous Equations 24
1.10. Related Topics, References, and Bibliography 27

Chapter 2. Plane Analytic Geometry 29

2.1. Introduction and Basic Concepts 30
2.2. The Straight Line 37
2.3. Relations Involving Points and Straight Lines 39
2.4. Second-order Curves (Conic Sections) 41
2.5. Properties of Circles, Ellipses, Hyperbolas, and Parabolas 48
2.6. Higher Plane Curves 53
2.7. Related Topics, References, and Bibliography 56

Chapter 3. Solid Analytic Geometry 57

3.1. Introduction and Basic Concepts 58
3.2. The Plane 67
3.3. The Straight Line 69
3.4. Relations Involving Points, Planes, and Straight Lines 70
3.5. Quadric Surfaces 74
3.6. Related Topics, References, and Bibliography 82

Chapter 4. Functions and Limits. Differential and Integral Calculus 83

4.1. Introduction 85
4.2. Functions 85
4.3. Point Sets, Intervals, and Regions 87
4.4. Limits, Continuous Functions, and Related Topics 90
4.5. Differential Calculus 95
# CONTENTS

## Chapter 4.6. Integrals and Integration

- Mean-value Theorems. Values of Indeterminate Forms. Weierstrass's Approximation Theorems.
- Infinite Series, Infinite Products, and Continued Fractions.
- Tests for the Convergence and Uniform Convergence of Infinite Series and Improper Integrals.
- Representation of Functions by Infinite Series and Integrals. Power Series and Taylor's Expansion.
- Fourier Series and Fourier Integrals.
- Related Topics, References, and Bibliography.

- Integrals and Integration 102
- Mean-value Theorems. Values of Indeterminate Forms. Weierstrass's Approximation Theorems. 118
- Infinite Series, Infinite Products, and Continued Fractions. 121
- Tests for the Convergence and Uniform Convergence of Infinite Series and Improper Integrals. 127
- Representation of Functions by Infinite Series and Integrals. Power Series and Taylor's Expansion. 131
- Fourier Series and Fourier Integrals. 134
- Related Topics, References, and Bibliography. 144

## Chapter 5. Vector Analysis

- Introduction
- Vector Algebra
- Vector Calculus: Functions of a Scalar Parameter
- Scalar and Vector Fields
- Differential Operators
- Integral Theorems
- Specification of a Vector Field in Terms of Its Curl and Divergence
- Related Topics, References, and Bibliography.

- Vector Analysis 145
- Introduction 146
- Vector Algebra 147
- Vector Calculus: Functions of a Scalar Parameter 151
- Scalar and Vector Fields 153
- Differential Operators 157
- Integral Theorems 162
- Specification of a Vector Field in Terms of Its Curl and Divergence 164
- Related Topics, References, and Bibliography 166

## Chapter 6. Curvilinear Coordinate Systems

- Introduction
- Curvilinear Coordinate Systems
- Representation of Vectors in Terms of Components
- Orthogonal Coordinate Systems. Vector Relations in Terms of Orthogonal Components
- Formulas Relating to Special Orthogonal Coordinate Systems
- Related Topics, References, and Bibliography.

- Curvilinear Coordinate Systems 168
- Introduction 168
- Curvilinear Coordinate Systems 169
- Representation of Vectors in Terms of Components 171
- Orthogonal Coordinate Systems. Vector Relations in Terms of Orthogonal Components 174
- Formulas Relating to Special Orthogonal Coordinate Systems 177
- Related Topics, References, and Bibliography 177

## Chapter 7. Functions of a Complex Variable

- Introduction
- Functions of a Complex Variable. Regions of the Complex-number Plane
- Analytic (Regular, Holomorphic) Functions
- Treatment of Multiple-valued Functions
- Integral Theorems and Series Expansions
- Zeros and Isolated Singularities
- Residues and Contour Integration
- Analytic Continuation
- Conformal Mapping
- Functions Mapping Specified Regions onto the Unit Circle
- Related Topics, References, and Bibliography.

- Functions of a Complex Variable 187
- Introduction 188
- Functions of a Complex Variable. Regions of the Complex-number Plane 188
- Analytic (Regular, Holomorphic) Functions 192
- Treatment of Multiple-valued Functions 193
- Integral Theorems and Series Expansions 196
- Zeros and Isolated Singularities 198
- Residues and Contour Integration 202
- Analytic Continuation 205
- Conformal Mapping 206
- Functions Mapping Specified Regions onto the Unit Circle 219
- Related Topics, References, and Bibliography 219

## Chapter 8. The Laplace Transformation and Other Functional Transformations

- Introduction
- The Laplace Transformation
- Correspondence between Operations on Object and Result Functions
- Tables of Laplace-transform Pairs and Computation of Inverse Laplace Transforms

- The Laplace Transformation and Other Functional Transformations 221
- Introduction 222
- The Laplace Transformation 222
- Correspondence between Operations on Object and Result Functions 225
- Tables of Laplace-transform Pairs and Computation of Inverse Laplace Transforms 228
Chapter 13. Matrices. Quadratic and Hermitian Forms 402
13.1. Introduction 403
13.2. Matrix Algebra and Matrix Calculus 403
13.3. Matrices with Special Symmetry Properties 410
13.4. Equivalent Matrices. Eigenvalues, Diagonalization, and Related Topics 412
13.5. Quadratic and Hermitian Forms 416
13.7. Related Topics, References, and Bibliography 430

Chapter 14. Linear Vector Spaces and Linear Transformations (Linear Operators). Representation of Mathematical Models in Terms of Matrices 431
14.1. Introduction. Reference Systems and Coordinate Transformations 433
14.2. Linear Vector Spaces 435
14.3. Linear Transformations (Linear Operators) 439
14.4. Linear Transformations of a Normed or Unitary Vector Space into Itself. Hermitian and Unitary Transformations (Operators) 441
14.5. Matrix Representation of Vectors and Linear Transformations (Operators) 447
14.6. Change of Reference System 449
14.7. Representation of Inner Products. Orthonormal Bases 452
14.8. Eigenvectors and Eigenvalues of Linear Operators 457
14.9. Group Representations and Related Topics 467
14.10. Mathematical Description of Rotations 471
14.11. Related Topics, References, and Bibliography 482

Chapter 15. Linear Integral Equations, Boundary-value Problems, and Eigenvalue Problems 484
15.1. Introduction. Functional Analysis 486
15.2. Functions as Vectors. Expansions in Terms of Orthogonal Functions 487
15.3. Linear Integral Transformations and Linear Integral Equations 492
15.4. Linear Boundary-value Problems and Eigenvalue Problems Involving Differential Equations 502
15.5. Green's Functions. Relation of Boundary-value Problems and Eigenvalue Problems to Integral Equations 515
15.6. Potential Theory 520
15.7. Related Topics, References, and Bibliography 531

Chapter 16. Representation of Mathematical Models: Tensor Algebra and Analysis 533
16.1. Introduction 534
16.2. Absolute and Relative Tensors 537
16.3. Tensor Algebra: Definition of Basic Operations 540
16.4. Tensor Algebra: Invariance of Tensor Equations 543
16.5. Symmetric and Skew-symmetric Tensors 543
16.6. Local Systems of Base Vectors 545
16.7. Tensors Defined on Riemann Spaces. Associated Tensors 546
16.8. Scalar Products and Related Topics 549
## CONTENTS

20.9. Numerical Solution of Boundary-value Problems, Partial Differential Equations, and Integral Equations .................................................. 785
20.10. Monte-Carlo Techniques ......................................................................................... 797
20.11. Related Topics, References, and Bibliography ......................................................... 800

Chapter 21. Special Functions ................................................................................................. 804
21.1. Introduction .................................................................................................................. 806
21.2. The Elementary Transcendental Functions ................................................................. 806
21.3. Some Functions Defined by Transcendental Integrals .............................................. 818
21.4. The Gamma Function and Related Functions ............................................................. 822
21.5. Binomial Coefficients and Factorial Polynomials, Bernoulli Polynomials, and Bernoulli Numbers ................................................................. 824
21.6. Elliptic Functions, Elliptic Integrals, and Related Functions ........................................ 827
21.7. Orthogonal Polynomials ............................................................................................. 848
21.9. Step Functions and Symbolic Impulse Functions ......................................................... 874
21.10. References and Bibliography ..................................................................................... 880

Appendix A. Formulas Describing Plane Figures and Solids .................................................. 881
Appendix B. Plane and Spherical Trigonometry ................................................................... 885
Appendix C. Permutations, Combinations, and Related Topics ........................................... 894
Appendix D. Tables of Fourier Expansions and Laplace-transform Pairs ............................. 900
Appendix E. Integrals, Sums, Infinite Series and Products, and Continued Fractions ........... 925
Appendix F. Numerical Tables .............................................................................................. 989
Squares ................................................................................................................................. 990
Logarithms .......................................................................................................................... 993
Trigonometric Functions .................................................................................................... 1010
Exponential and Hyperbolic Functions ............................................................................. 1018
Natural Logarithms ............................................................................................................. 1025
Sine Integral ........................................................................................................................ 1027
Cosine Integral .................................................................................................................... 1028
Exponential and Related Integrals .................................................................................... 1029
Complete Elliptic Integrals ................................................................................................ 1033
Factorials and Their Reciprocals ....................................................................................... 1034
Binomial Coefficients ........................................................................................................ 1034
Gamma and Factorial Functions ......................................................................................... 1035
Bessel Functions ............................................................................................................... 1037
Legendre Polynomials ....................................................................................................... 1060
Error Function .................................................................................................................... 1061
Normal-distribution Areas ................................................................................................. 1062
Normal-curve Ordinates ..................................................................................................... 1063
Distribution of $t$ .................................................................................................................. 1064
Distribution of $x^2$ .............................................................................................................. 1065
