A Wide-Band Air-Ground Channel Model

**DISSERTATION**

zur Erlangung des akademischen Grads eines

**DOKTOR-INGENIEURS**

**(DR.-ING.)**

der Fakultät für Elektrotechnik und Informationstechnik der
Technischen Universität Ilmenau
des Freistaats Thüringen

von

Dipl.-Ing. Nicolas Schneckenburger

aus Mainz

Gutachter:

Prof. Dr.-Ing. Giovanni Del Galdo
Prof. Dr.-Ing. Uwe-Carsten Fiebig
Prof. David W. Matolak, Ph.D.

## 1 Introduction

## 2 Channel Modeling Fundamentals

2.1 Overview .................................................. 8
2.2 Propagation Mechanisms .................................. 8
2.3 Propagation in the Context of Terrestrial CNS Systems ........ 12
  2.3.1 Communication ........................................ 13
  2.3.2 Navigation .............................................. 15
  2.3.3 Surveillance ............................................ 17
2.4 Channel Modeling ........................................... 18
  2.4.1 Deterministic Channel Modeling ....................... 18
  2.4.2 Statistical Channel Modeling .......................... 19
  2.4.3 Geometry-Based Stochastic Channel Modeling ........ 20
2.5 Channel Description ........................................ 21
  2.5.1 Deterministic Channel Description ..................... 21
  2.5.2 Statistical Channel Description ....................... 23
2.6 Air-Ground Channel Modeling - Prior Work .................. 25
  2.6.1 Channel Measurements ................................ 25
  2.6.2 Theoretical Channel Analyses ........................ 29
  2.6.3 Shortcomings of Previous Channel Models ............. 29
2.7 Summary ................................................... 30

## 3 Channel Model Architecture

3.1 Overview .................................................. 32
3.2 Propagation Effects in the Air-Ground Channel ............... 32
3.3 Channel Model Architecture and Elements ...................... 33
  3.3.1 Architecture Overview ............................... 33
3.3.2 Simulation Chain .............................................. 35
3.3.3 Line-of-Sight Signal ........................................ 35
3.3.4 Ground Multipath Component ............................... 37
3.3.5 Lateral Multipath Components .............................. 38
3.3.6 Antennas .......................................................... 40
3.3.7 Ground Shadowing ........................................... 41
3.3.8 Diffuse Multipath Components .............................. 42
3.4 Required Information ........................................... 43
3.5 Summary ............................................................. 45

4 Channel Parameter Estimation .................................. 47
4.1 Overview .............................................................. 48
4.2 Signal Model ........................................................ 48
4.3 Preprocessing ........................................................ 52
  4.3.1 Detection of DME Interference ............................. 52
  4.3.2 Shifting to LoS Signal Delay and Doppler Frequency .... 53
4.4 Statistical Channel Description ................................. 54
  4.4.1 Power Delay Profile (PDP) .................................. 54
  4.4.2 Doppler Power Profile (DPP) ............................... 55
  4.4.3 Parameters of the Delay-dispersive Channel ............ 55
4.5 MPC Parameter Estimation & Tracking ........................ 56
  4.5.1 Parameter Tracking .......................................... 58
  4.5.2 MPC Parameter Estimation .................................. 60
  4.5.3 Colored Noise Estimation ................................... 60
  4.5.4 Model Order Adjustments ................................... 63
  4.5.5 Calculation of Fisher Information Matrix ............... 65
4.6 Localization Algorithm .......................................... 66
  4.6.1 Fundmentals .................................................. 67
  4.6.2 Reflective Location Probability Density Function (PDF) 69
4.7 Summary ............................................................. 69

5 Flight Trial Setup .................................................. 71
5.1 Overview .............................................................. 72
5.2 Measurement System ............................................. 72
  5.2.1 Hardware Setup .............................................. 72
  5.2.2 Channel Sounding Signal ................................... 75
  5.2.3 Measurement Procedures ................................... 77
  5.2.4 Reference Range Calculation .............................. 81
5.2.5 Approximation of the Overall Measurement Error .......... 85
5.2.6 Interference ...................................................... 86

5.3 Flight Routes ......................................................... 87
5.3.1 Flight 1: November 14th 2013 ................................. 89
5.3.2 Flight 2: November 20th 2013 - Part 1 ....................... 90
5.3.3 Flight 2: November 20th 2013 - Part 2 ....................... 91

5.4 Summary .............................................................. 92

6 Measurement Results .................................................. 93
6.1 Overview ............................................................. 94
6.2 Definition of Flight Scenarios ...................................... 94
6.3 Line-of-Sight Signal Power ......................................... 95
6.3.1 Statistical Distribution ......................................... 96
6.3.2 Non-Stationarity ................................................ 97
6.4 Multipath Channel Statistics .................................... 98
6.4.1 Power Delay Profile ........................................... 100
6.4.2 Doppler Power Profile ......................................... 100
6.4.3 Mean Delay and Delay Spread ................................. 102
6.5 Multipath Component Parameter Estimation Algorithm ......... 105
6.5.1 Power ............................................................ 105
6.5.2 Delay Estimation ................................................. 108
6.5.3 Doppler Frequency Estimation ................................. 108
6.6 Localization Algorithm ............................................ 109
6.6.1 Single Reflector Probability Density Function ............... 109
6.6.2 Distribution of Reflectors ...................................... 112
6.7 Summary .............................................................. 115

7 Channel Model Parameterization for a Regional Airport .... 117
7.1 Overview ............................................................. 118
7.2 Derivation of the Parameterization ............................... 118
7.2.1 Line of Sight Signal ............................................. 118
7.2.2 Ground Multipath Component ................................. 119
7.2.3 Lateral Multipath Component .................................. 122
7.2.4 Ground Shadowing .............................................. 139
7.2.5 Antennas ......................................................... 140
7.2.6 Diffuse Multipath Components ................................. 141

7.3 Validation of the Parameterization ............................... 144
7.3.1 Quantitative Validation ........................................ 145
