Abstract	9
Contents	II
I Introduction	15
1.1 Contributions . . . . .	17
1.2 Outline . . . . .	18
II State of the Art	19
2.1 Classification of Device and System Testing . . . . .	19
2.1.1 Software-based Tests . . . . .	21
2.1.2 Hardware-based Field Tests . . . . .	22
2.1.3 Hardware-based Laboratory Tests . . . . .	22
2.2 Conducted Test and Two-Stage Method . . . . .	22
2.3 Over-The-Air Test Methods . . . . .	23
2.3.1 Reverberation Chamber and Anechoic Chamber . . . . .	23
2.3.2 2-Channel Method . . . . .	24
2.3.3 Pre-Faded Synthesis . . . . .	25
2.3.4 Wave-Field Synthesis . . . . .	25
2.3.5 Wave-Field Synthesis Calibration Methods . . . . .	25
2.3.6 Radiated Two-Stage and Wireless Cable Method . . . . .	26
2.4 Comparison of Test Methods . . . . .	26
2.5 Practical Testbeds . . . . .	27
2.5.1 Galileo Test Environment . . . . .	27
2.5.2 Virtual Road Simulation and Test Area . . . . .	27
2.5.2.1 Radiation Pattern Measurements . . . . .	27
2.5.2.2 Drive Tests . . . . .	28
2.5.3 Facility for Over-the-Air Research and Testing . . . . .	28
2.5.3.1 Satellite Communication Testing . . . . .	28
2.5.3.2 Over-The-Air Testing . . . . .	30
2.6 Direction Of Arrival Estimation . . . . .	31
2.6.1 The Cramér-Rao Lower Bound for Direction Of Arrival Estimation . . . . .	31
2.6.2 Correlation-Based Direction Of Arrival-Estimation . . . . .	32
2.6.3 Space Alternating Generalized Expectation Maximization . . . . .	33

2.6.4	RIMAX Maximum Likelihood Parameter Estimator . . . . .	33
2.7	Use Cases . . . . .	34
2.7.1	Cognitive Radio – Secondary Use of Unused Spectrum . . . . .	34
2.7.2	Mobile Communications / Intelligent Transportation Systems . . . . .	35
2.7.3	Global Navigation Satellite Systems . . . . .	36
III	Theory . . . . .	39
3.1	Background . . . . .	39
3.1.1	History . . . . .	39
3.1.2	From the Kirchhoff-Helmholtz Integral to Wave-Field Synthesis . . . . .	40
3.2	Wave-Field Synthesis Data Model . . . . .	43
3.3	Channel Data Model . . . . .	45
3.4	Field Quality Metrics . . . . .	46
3.4.1	Error Vector Magnitude . . . . .	46
3.4.2	Pointing Vector Angular Deviation . . . . .	47
3.4.3	Field Quality Metrics: Comparison & Conclusions . . . . .	48
3.5	The Number of Emulation Antennas versus the Sweet Spot Size . . . . .	48
3.6	Emulation Antenna Constellations . . . . .	52
3.6.1	Two-dimensional Constellations . . . . .	52
3.6.2	Three-dimensional Constellations . . . . .	52
3.6.2.1	Chebyshev Grid . . . . .	53
3.6.2.2	Lebedev Grid . . . . .	53
3.6.2.3	Fibonacci Grid . . . . .	53
3.6.2.4	Optimized Scenario . . . . .	54
3.6.2.5	Optimized Sphere Algorithm . . . . .	56
3.6.2.6	Optimized Sub-Sphere Algorithm . . . . .	56
3.6.3	Emulation Antenna Constellations: Comparison & Conclusions . . . . .	58
3.7	Emulation Antenna Selection . . . . .	59
3.8	Optimization Points Constellations . . . . .	61
IV	Achievable Accuracy and System Imperfections . . . . .	63
4.1	Geometry-Based Field Degradation . . . . .	63
4.1.1	Amplitude Decay . . . . .	64
4.1.2	Wave Field Curvature . . . . .	64
4.2	Polarization of Emulation Antennas . . . . .	66
4.3	Error Vector Magnitude Analysis . . . . .	68
4.3.1	Two-dimensional Emulation Antenna Arrangement . . . . .	69
4.3.2	Three-dimensional Emulation Antenna Arrangement . . . . .	70
4.4	Cramér-Rao Lower Bound and DOA Estimation Accuracy . . . . .	77
4.4.1	Standard Deviation of Direction Of Arrival Estimation . . . . .	78
4.4.2	Direction Of Arrival Estimation Accuracy . . . . .	83
4.5	Noise and Drift . . . . .	85
4.5.1	Fixed Amplitude and Phase Errors . . . . .	89
4.5.2	Random Amplitude and Phase Errors . . . . .	90
4.5.3	Emulation Antenna Variation . . . . .	91
4.5.4	Frequency Variation . . . . .	92
4.6	Temperature Variations . . . . .	93

V	Hardware Setup & Calibration	97
5.1	Anechoic Chamber . . . . .	97
5.1.1	Positioner and OTA Ring . . . . .	98
5.1.2	Emulation Antenna . . . . .	98
5.2	Signal Processing Hardware . . . . .	100
5.3	System Calibration . . . . .	102
5.3.1	Electromagnetic Field Probe . . . . .	104
5.3.2	Calibration Measurement and Steering Vector Determination . . . . .	106
5.3.3	Power Calibration . . . . .	107
VI	Evaluation and Validation	III
6.1	Reflections and Reflection Compensation . . . . .	III
6.1.1	Initial Measurement Setup . . . . .	II2
6.1.2	Uncompensated Reflections . . . . .	II3
6.1.3	Reflection Compensation . . . . .	II6
6.1.4	Absorber Covered OTA Ring . . . . .	II8
6.1.5	Error Vector Magnitude Analysis of Absorber Covered OTA Ring . . . . .	I22
6.1.6	Discussion . . . . .	I22
6.2	Wave-Field Synthesis Validation using a GNSS Setup . . . . .	I23
6.2.1	Testbed . . . . .	I24
6.2.2	Measurement Setups . . . . .	I25
6.2.3	GPS Signal Parameters & Device Under Test . . . . .	I27
6.2.4	Results for Static Device Under Test . . . . .	I28
6.2.5	Results for Mobile Device Under Test on Rectangular Race-Track . . . . .	I28
6.2.6	Observed Effects and Discussion . . . . .	I29
6.2.6.1	Dimensioning the Optimization Grid . . . . .	I30
6.2.6.2	FDSP Sampling Problem . . . . .	I32
VII	Conducting Practical Tests	I35
7.1	Scenario / Use Case . . . . .	I35
7.2	Device Properties / Measurement Setup . . . . .	I37
7.3	Simulation and Calibration . . . . .	I38
7.3.1	Error Vector Magnitude Simulation . . . . .	I38
7.3.2	Steering Vector Calculation . . . . .	I39
7.3.3	GPS and Interferer Power Relations . . . . .	I40
7.4	Performance Metric . . . . .	I40
7.5	Performing Measurements . . . . .	I41
7.6	Data Post-Processing . . . . .	I41
7.6.1	Null-Steering . . . . .	I42
7.6.2	Beam-Forming . . . . .	I43
7.6.3	Carrier-to-Noise Estimation . . . . .	I44
7.7	Evaluation . . . . .	I46
7.8	Discussion . . . . .	I48

VIII	An Alternative Approach for Testing Large Devices: Wireless Cable	149
8.1	Theory . . . . .	149
8.1.1	Overview . . . . .	150
8.1.2	Obtaining Wireless Cables . . . . .	152
8.1.3	Embedding a Realistic Propagation Channel . . . . .	153
8.2	Setup & Implementation . . . . .	154
8.2.1	Step One – Radiation Pattern Measurement . . . . .	154
8.2.2	Step Two – Echoic Chamber Measurement . . . . .	154
8.2.3	Step Three – Propagation Channel Application . . . . .	155
8.3	Measurements & Results . . . . .	155
8.3.1	Long-Term Stability . . . . .	155
8.3.2	Car-to-Infrastructure Propagation Scenario Emulation . . . . .	156
IX	Conclusions & Outlook	159
9.1	Wave-Field Synthesis . . . . .	160
9.2	Wireless Cable . . . . .	160
9.3	Outlook . . . . .	161
Appendix A	Mathematical table	165
A.1	Coordinate Systems & Transformation . . . . .	165
A.1.1	Roll/Pitch/Yaw . . . . .	165
A.1.2	Rotation Matrix . . . . .	166
A.2	Polarization & Conversion . . . . .	166
A.3	Statistics . . . . .	166
Appendix B	Spirent GSS9000 TS788	169
B.1	SimGen Graphical User Interface . . . . .	169
Appendix C	Antennas & Propagation	173
C.1	Radiation Pattern . . . . .	173
C.2	Field Strength Calculation . . . . .	174
