Contents

Part I: Double Layer

1. The Concept of Electrochemical Double Layer in the Case of Weakly Adsorbed Anions ......................................................... 3
   Henri D. Hurwitz, André Jenard, and Bede Bicamumpaka

2. Electrofloation: From the Double Layer to Troubled Waters .......... 21
   Klaus Müller

3. Importance of Electrical Double Layer in Technological Applications 39
   Zlata Kovac and Carlos J. Sambucetti

4. Electrochromism ................................................................. 51
   M. Ahsan Habib

Part II: Spectroscopic Studies

5. Ellipsometry at Metal–Electrolyte Interfaces ............................. 65
   W. Visscher

6. Combined Ellipsometric and Reflectance Measurements for Characterization of Films Formed on Electrodes ......................... 73
   Woon-kie Paik and Duckhwan Lee

7. In Situ SNIFTIRS and Radiotracer Study of Adsorption on Platinum: CF₃SO₃H and H₃PO₄ ...................................................... 81
   Piotr Zelenay
Part III: Electrode Kinetics and Electrocatalysis

8. Transition-Metal Oxide Electrocatalysts for $O_2$ Electrodes:
The Pyrochlores ......................................................... 93
   Jai Prakash, Donald Tryk, Wesley Aldred, and Ernest Yeager

9. Progress in the Studies of Oxygen Reduction during the Last
   Thirty Years .......................................................... 107
   A. Damjanovic

10. Mechanism of Oxygen Reduction on Iron in Neutral Aqueous
    Solutions: Oxygen Chemisorption Model .......................... 127
    Vladimir Jovancicevic

11. Rechargeable Manganese Oxide Electrodes and Cells ............. 147
    Halina S. Wroblowa

12. A Direction of Study of Electrocatalysis in Anodic $O_2$ Evolution through
    Characterization of Chemisorption Behavior of Intermediates .... 161
    B. E. Conway

13. Quantum-Mechanical Formalisms of Electron Transfer Reactions
    at Electrode–Electrolyte Interfaces ............................... 179
    Shahed U. M. Khan

Part IV: Photoelectrochemistry

14. Novel Approaches for the Study of Surface Structure and Reactivity
    of Semiconductor Electrodes ......................................... 193
    Kohei Uosaki, Per Carlsson, Hideaki Kita, and Bertil Holmström

15. Photoelectrocatalysis .................................................. 205
    Marek Szklarczyk

16. An Application of Optical Waveguides to Electrochemical and
    Photoelectrochemical Processes ..................................... 219
    Kiminori Itoh and Akira Fujishima
CONTENTS

17. Electrons, Interfaces, and Societies in the 21st Century 227
    J. O'M. Bockris

Part V: Hydrogen Technologies, Organic Electrochemistry

18. Comparison of Hydrogen with Coal and Synthetic Fossil Fuels 325
    T. N. Veziroglu, H. J. Plass, Jr., and F. Barbir

19. Adsorption and Absorption of Hydrogen in Metals. FTIR and RT Approach 339
    Jose L. Carbajal and Ralph E. White

20. Investigations on the Fabrication of Active Electrocatalysts for Methanol Electrooxidation 359
    Michio Enyo, Ken-ichi Machida, Atsushi Fukuoka, and Masaru Ichikawa

21. Some Perspectives on Electroorganic Chemistry 371
    B. J. Piersma

22. Electrochemical Reduction of Carbon Dioxide 381
    Benedict Aurian-Blajeni

23. Electrochemical Treatments of Wastes 397
    Lamine Kaba and G. Duncan Hitchens

Part VI: Bioelectrochemistry

24. Coherent Dynamics and Solitary Waves in Ordered Monolayers 411
    G. C. Huth, F. Gutmann, and G. Vitiello

25. Electrochemical Aspects of Bone Remodeling 419
    Nejat Guzelsu and Alvin J. Salkind

26. Electrochemistry Applied to Medical Diagnostics 427
    Marvin A. Genshaw
27. Utilization of Dissolved Oxygen in Water to Prevent Microbial Fouling on Metals ........................................... 437
   Hari P. Dhar

   Part VII: Electrodeposition and Electrodissolution, High-Temperature Electrochemistry

28. Identification of Phase Structure of Alloys by Anodic Linear Sweep Voltammetry ........................................... 453
   Aleksandar R. Despić

29. The Effects of the Slow Adsorption of Anions and Some Organics on Iron Dissolution Kinetics ......................... 469
   D. M. Dražić, V. J. Dražić, and V. Jevtić

30. Electroless Deposition of Metals and Alloys ....................... 479
    Milan Paunovic

31. Electrochemical Nucleation on Active Sites ........................ 499
    Benjamin R. Scharifker

32. Cathodic Reduction of Oxygen on a Partially Immersed Electrode in Chloride and Carbonate Melts ......................... 509
    Hiroo Numata, Haruyuki Takagi, and Shiro Haruyama

   Part VIII: Passivity, Corrosion, Steels, and Minerals

33. Spectroscopic Characterization of the Passive Film on Iron before and after Exposure to Chloride Ion .................... 521
    Oliver J. Murphy

34. Corrosion of Thin Film Storage Media: A Review .................... 547
    Vlasta Brusic, Jean Horkans, and Donald J. Barclay

35. Characterization of Sulfide Mineral Surfaces ........................ 561
    R. Woods
## Part IX: Electrochemical Energy Conversion

### 36. Electrode Kinetic and Electrocatalytic Aspects of Electrochemical Energy Conversion

*Supramaniam Srinivasan*

- Page 577

### 37. XAS Techniques for Investigation of Materials for Energy Conversion and Storage

*James McBreen*

- Page 603

### 38. Electrocatalysis on SPE Membrane Electrodes

*Hideaki Kita, Hiroshi Nakajima, and Katsuaki Shimazu*

- Page 619

### 39. Advances in Aluminum–Air Salt Water Batteries

- Page 629

### 40. Organic Electrolytes of Rechargeable Lithium Batteries

*Yoshiharu Matsuda*

- Page 641

### 41. Mechanism of the Cathodic Discharge of MnO$_2$ in Alkaline Electrolyte

*Terrell N. Andersen and Joseph M. Derby*

- Page 655
