Introduction

PART 1 Alphabetical listing of surfactants by industry sector

Agrochemicals 1
Emulsifiers, wetting agents, dispersants and surfactant related products for the formulation and activity optimisation of crop protection chemicals including herbicides, insecticides and fungicides.

Construction 29
Processing aids for the building and construction industry including foaming agents for UF foam, concrete and plasterboard gypsum, concrete super plasticisers, bitumen emulsifiers and adhesion promoters.

General detergents 37
Components of domestic and industrial detergents including detergent concentrates, foaming agents, hydrotropes, low foam surfactants and emulsifiers.

Food 61
Food grade surfactants, processing aids for the food and beverage industry and components for the formulation of cleaners for the dairy, brewery and food processing industries.

Industrial and institutional cleaning 71
Surfactants for the formulation of maintenance chemicals used in industrial, institutional, transport and other cleaning operations.

Leather and fur 123
Fat liquoring, tanning, wetting and dispersing agents and other auxiliaries for the processing of leather and fur.

Metal working 135
Surfactants for use in cutting oils, pickling and plating baths, metal degreasing, anti-corrosion systems and other metal treatment applications.

Mineral extraction and processing 157
Wetters, flotation agents, dewatering aids, collectors, dispersants and other processing aids for the extraction, handling and processing of minerals.

Miscellaneous 165
Defoamers, biocides, thickening agents, catalysts and other applications not covered in other sections.

Paint, lacquer and ink 173
Dispersants, wetting agents, defoamers, corrosion inhibitors, coalescing solvents used in the production of paints, lacquers, inks and other speciality coatings.

Paper 187
Defoaming agents, retention aids, deinking chemicals, dispersants and other processing aids for pulp and paper production and paper coating.

Petroleum 195
Emulsifiers, demulsifiers, corrosion inhibitors, biocides and other surfactants used in oil field drilling operations, extraction and processing of crude oil and in oil spill dispersants.

Pharmaceuticals 213
Processing aids for the production and extraction of antibiotics, emulsifiers and stabilisers for pharmaceutical and cosmetic creams, biocides and components of cosmetic and toiletry formulations.

Plastics 225
Surfactants for the production of emulsion polymers, foaming agents for synthetic latex, antistatic agents, adhesion promotors and other auxiliaries for the production of water-based latices and the processing and formulation of both emulsion polymers and thermoplastics such as PVC.

Textiles and fibres 247
Scouring, wetting and levelling agents for the wet-end processing of textiles and fibres. Antistatic agents, lubricants, softening agents, spin finishes and other auxiliaries for the processing of synthetic and natural fibres.

Toiletries 281
Ingredients for hair care, bath products and cosmetic formulations including conditioners, foaming agents, emulsifiers, emollients, thickening agents and pearlisers. Stabilisers for perfumes and essential oils.

PART 2 Index of surfactant properties listed by industry sector

Agrochemicals - properties 323
Construction - properties 328
General detergents - properties 330
Food - properties 334
Industrial and institutional cleaning - properties 336
Leather and fur - properties 346
Metal working - properties 349
Mineral extraction processing - properties 354
Miscellaneous - properties 356
Paint, lacquer and ink - properties 358
Paper - properties 361
Petroleum - properties 363
Pharmaceuticals - properties 367
Plastics - properties 369
Textile fibres - properties 373
Toiletries - properties 379

Appendix: Company names and addresses 389
