Zeolite, Clay, and Heteropoly Acid in Organic Reactions

by

Yusuke Izumi, Kazuo Urabe and Makoto Onaka
Contents

Preface vii

Chapter 1 Organic Synthesis on Silicate Surfaces

1.1 Introduction ..............................................................................................................1
1.2 Organic Reactions on Zeolite ..................................................................................2
  1.2.1 Reactions Promoted by Acid and Base Dual Sites of Zeolite 2
  1.2.2 Zeolite as a Reagent Support 10
  1.2.3 Zeolite as a Rigid Macroligand to Transition Metals 19
1.3 Organic Reactions on Clay Montmorillonite .......................................................21
  1.3.1 Aldol Reactions 22
  1.3.2 Michael Addition Reactions 31
  1.3.3 Additions of Ester Enolates to Ynoates 35
  1.3.4 Other Carbon–Carbon Bond-forming Reactions 37
References 44

Chapter 2 Clay as Potential Catalyst Material

2.1 Introduction ..............................................................................................................49
2.2 Clay Compounds as Inorganic Polymers ..............................................................49
  2.2.1 Structure and Composition 50
  2.2.2 Various Clays to Extend Catalytic Functions 52
2.3 Catalytic Efficiency-determining Factors of Clay .................................................63
  2.3.1 Particle Size 64
  2.3.2 Cation-exchange Capacity 67
  2.3.3 Position of Isomorphous Substitution 71
2.4 New Catalytic Aspects of Synthetic Clays ............................................................76
  2.4.1 House-of-cards Aggregates 76
  2.4.2 Fixation of Exchangeable Cations 82
  2.4.3 Incorporation of Metal into Clay Lattices 91
References 95
Chapter 3 Heteropoly Acid as Multifunctional Catalyst

3.1 Introduction .................................................................99
3.2 Fundamental Chemistry of Heteropoly Acid ..................................100
  3.2.1 Structures 100
  3.2.2 Properties 101
  3.2.3 Synthesis and Identification 102
  3.2.4 Interaction with Organic Substances 103
3.3 Acid Catalysis ........................................................................103
  3.3.1 Liquid–phase Homogeneous Reactions 105
  3.3.2 Liquid–phase Heterogeneous Reactions 125
  3.3.3 Vapor–phase Heterogeneous Reactions 132
3.4 Oxidation Catalysis ...............................................................141
  3.4.1 Vapor–phase Oxidation Reactions 141
  3.4.2 Liquid–phase Oxidation Reactions 145
3.5 Modifying Functions of Heteropoly Anion on Transition Metal Catalysis ......150
  3.5.1 Hydrogenation by Heteropoly Anion – Transition Metal Catalysts 150
  3.5.2 Oxidation by Heteropoly Anion – Transition Metal Catalysts 155
  3.5.3 Other Reactions by Heteropoly Anion – Transition Metal Catalysts 157
