List of participants xi
List of contributors xiii

Part 1: Introduction

1 Introductory remarks 3
   W. R. Salaneck

2 Importance of an interdisciplinary approach to the progress in polymer chemistry 7
   K. Fukui

3 Background—polymer science before 1977 15
   B. Ränby

4 Conjugated polymers: the interconnection of chemical and electronic structure 27
   A. J. Heeger

Part 2: Chemical synthesis and structure

5 Synthesis and characterization of polyacetylene 65
   H. Shirakawa, Y.-X. Zhang, and K. Akagi

6 The polyanilines: a novel class of conducting polymers 73
   A. G. MacDiarmid

7 Synthesis of electrically conducting polymers—correlations, consequences, and concepts 99
   H. Naarmann

8 Functionalization of conducting polymers toward a molecular device 109
   T. Shimidzu and T. Iyoda

9 Novel functional gel characteristics of conducting polymer 121
   K. Yoshino

10 Synthesis and optical properties of chiral poly(2,5-bis(3,7-dimethyl-6-octenoxy)-1,4-phenylenevinylene) 139
    E. Harley and F. Wudl
Contents

11 Highly electrically conducting polypyrrole and its composites prepared by chemical polymerization methods 149
Y.E. Whang and S. Miyata

12 On the macromolecular chain structure of conducting polypyrrole 161
R. Qian

13 The chemistry and photochemistry of the precursor route to polyacetylene, implications for materials science and physics. An overview 171

Part 3: Electronic structure and excitations

14 The polyanilines: illustration of the interconnection between chemical structure, geometric structure, and electronic structure in conjugated polymers 187
J.-L. Brédas

15 The peierls ground state, solitons and polarons in ring-containing polymers 223
A.J. Epstein

16 Conjugation lengths and non-linear optical properties of organic polymers 229
R.J. Silbey

17 Molecular and electronic structures of metallic polyacetylene 239
J. Tanaka and C. Tanaka

18 The metallic state of heavily doped conducting polymers 247
S.A. Kivelson and M.I. Salkola

Part 4: Applications

19 Possible mechanism for the gas-selective properties of emeraldine membranes 263
H. Reiss

20 Conjugated oligomers as model compounds for the charge transport process: towards molecular electronics 273
F. Garnier
Contents

21 Semiconductor devices fabricated with conjugated polymers: novel optoelectronic properties
R. H. Friend

22 Electronic structure and chemical structure of conjugated polymers: a contribution from Raman and Resonance Raman excitation
H. Kuzmany

23 Probing the electronic structure of polyconjugated molecules by vibrational spectroscopy
G. Zerbi

24 Non-equilibrium processes in conducting polymers: slow relaxation effect
M. Nechtschein, C. Odin, and B. Villeret

25 Scanning tunnelling microscopy study of conducting polymers
M. Schott, E. Lacaze, and J. Garbarz

26 Optical studies of photoexcitations in trans-polyacetylene
Z. V. Vardeny

27 Band gap states of β-carotene
E. Ehrenfreund and F. Coter

Part 6: Related concepts and materials

28 Molecular superconductors and related conductors
K. Bechgaard

29 Molecular concepts of normal and superconducting states in conjugated polymers and related materials
T. Yamabe

30 Magnetic phase of carbon
A. A. Ovchinnikov

31 Room temperature co-operative behaviour in a molecular-based material
J. S. Miller, J. M. Manriquez, G. T. Yee, and A. J. Epstein

32 Molecular/organic/polymeric based magnets: the interconnection of chemical and magnetic structure
A. J. Epstein and J. S. Miller
