Contents

Series Editor’s Foreword ................................................................. vii
Preface ................................................................................................ ix
List of Contributors .......................................................................... xi

Part I Intelligent Design Systems

1 Feature-based Fixture Design and Set-up Planning
   Xin Dong, Charles R. Gilman, and Michael J. Wozny ............................... 5

2 Automated Generation of Sculptured Surface Models
   James H. Oliver and Philip Theruvakatti ................................................. 33

3 An Intelligent Approach to Conceptual Design of Mechanical Systems
   Qun Wang, Ming Rao, and Ji Zhou ....................................................... 59

4 Developing an Intelligent CAD System
   Tetsuo Tomiyama, Deyi Xue, and Hiroyuki Yoshikawa ......................... 83

Part II Product and Production Planning Using Intelligent Systems

5 Product Planning Optimization Using Quality Function Deployment
   Biren Prasad ...................................................................................... 117

6 Automated Generation of Minimum Cost Production Sequence
   Zuomin Dong .................................................................................... 153
7 A Knowledge-based System for Building Scheduling Models
Andrew Kusiak and Juite Wang .................................................................173

Part III Intelligent Manufacturing Systems – Planning and Control

8 Automated Process Planning and Machining of Sculptured Parts
Yuan-Shin Lee .............................................................................................................203

9 Intelligent Rough Machining of Sculptured Parts – Planning and Programming
Hui Li, Zuomin Dong, and Geoffrey W. Vickers .........................................................235

10 Artmap Neural Networks for Closed-loop Welding Process Control
H.-H. Tom Huang, H.-P. Ben Wang, and Gary W. Fischer ........................................259

Part IV Motion Planning for Intelligent Robotic and Manufacturing Systems

11 Object and Workspace Modeling Based on a 3-D Vision System
Helai Yao, Ron Podhorodeski, and Zuomin Dong ..................................................285

12 Motion Planning and Geometric Design
Chung-Yuh Liu and Roger W. Mayne .....................................................................311

13 Collision Identification between Convex Objects Using Neural Networks
Jing Yuan, Yury Stepanenko, and Zuomin Dong ....................................................351
