Chapter II. Nuclear Phenomenology

Introductory Remarks 28
Properties of Nuclei 28
  Labeling of Nuclei 28
  Masses of Nuclei 29
  Sizes of Nuclei 32
  Nuclear Spins and Dipole Moments 33
  Stability Curve 35
  Instability of Nuclei 36
Nature of the Nuclear Force 38
Problems 43
Suggested Readings 44

Chapter III. Nuclear Models

Introductory Remarks 45
Liquid Drop Model 46
The Fermi-Gas Model 48
Shell Model 51
Infinite Square Well 56
Harmonic Oscillator 57
Spin–Orbit Potential 59
Predictions of the Shell Model 62
Collective Model 64
Superdeformed Nuclei 66
Problems 67
Suggested Readings 68

Chapter IV. Nuclear Radiation

Introductory Remarks 69
Alpha Decay 69
Example 72
Barrier Penetration 73
Beta Decay 77
Gamma Decay 85
Problems 87
Suggested Readings 88

Chapter V. Applications of Nuclear Physics

Introductory Remarks 89
Fission 89
CONTENTS

Chain Reaction 96
Nuclear Fusion 98
Radioactive Decay 102
Example 1 104
Radioactive Equilibrium 106
Natural Radioactivity and Radioactive Dating 107
Example 2 109
Problems 110
Suggested Readings 112

Chapter VI. Energy Deposition in Media 113
   Introductory Remarks 113
   Energy Loss 114
   Charged Particles 114
   Units of Energy Loss and Range 117
   Example 1 118
   Example 2 118
   Straggling, Multiple Scattering, and Statistical Processes 119
   Example 3 120
   Energy Loss through Bremsstrahlung 121
   Example 4 123
   Interactions of Photons with Matter 124
      Photoelectric Effect 125
      Compton Scattering 126
      Pair Production 127
   Example 5 129
   Example 6 130
   Example 7 130
   Interactions of Neutrons 131
   Interaction of Hadrons at High Energies 131
   Problems 132
   Suggested Readings 133

Chapter VII. Particle Detection 134
   Introductory Remarks 134
   Ionization Detectors 134
   Ionization Counters 136
   Proportional Counters 138
   Geiger-Müller Counters 141
   Scintillation Detectors 142
Time of Flight 145
Cherenkov Detectors 148
Semiconductor Detectors 149
Calorimeters 150
Layered Detection 153
Problems 154
Suggested Readings 155

Chapter VIII. Accelerators 156
Introductory Remarks 156
Electrostatic Accelerators 157
    Cockcroft-Walton Machines 157
    Van de Graaff Accelerator 158
Resonance Accelerators 159
    Cyclotron 159
Example 161
    Linac or Linear Accelerator 162
Synchronous Accelerators 163
Phase Stability 166
Strong Focusing 168
Colliding Beams 170
Problems 173
Suggested Readings 175

Chapter IX. Properties and Interactions of Elementary Particles 176
Introductory Remarks 176
Forces 177
Elementary Particles 180
Quantum Numbers 183
    Baryon Number 183
    Lepton Number 184
    Strangeness 185
    Isospin 188
Gell-Mann–Nishijima Relation 190
Production and Decays of Resonances 192
Determining Spins 194
Violation of Quantum Numbers 198
    Weak Interactions 198
        Hadronic Weak-Decays 198
Chapter X. Symmetries

Introductory Remarks 203
Symmetries in the Lagrangian Formalism 204
Symmetries in the Hamiltonian Formalism 208
Infinitesimal Translations 209
Infinitesimal Rotations 212
Symmetries in Quantum Mechanics 214
Continuous Symmetries 217
Example—Isotopic Spin 221
Local Symmetries 224
Problems 226
Suggested Readings 226

Chapter XI. Discrete Transformations

Introductory Remarks 227
Parity 227
Example 1—Parity of $\pi^-$ Meson 232
Example 2—Parity of $\Delta(1232)$ 233
Violation of Parity 233
Time Reversal 235
Charge Conjugation 238
CPT Theorem 241
Problems 241
Suggested Readings 242

Chapter XII. Neutral Kaons and CP Violation

Introductory Remarks 243
Neutral Kaons 244
$CP$ Eigenstates of Neutral Kaons 246
Strangeness Oscillation 248
$K^0_l$ Regeneration 249
Violation of $CP$ Invariance 250
Time Development and Analysis of the $K^0-\bar{K}^0$ System 254
Semileptonic $K^0$ Decays 260
Problems 262
Suggested Readings 263
Chapter XIII. The Standard Model 264

Introductory Remarks 264
Quarks and Leptons 265
Quark Content of Mesons 266
Quark Content of Baryons 268
Need for Color 269
Example—Quark Model for Mesons 271
Weak Isospin and Color Symmetry 273
Gauge Bosons 274
Dynamics of the Gauge Particles 276
Symmetry Breaking 279
Quantum Chromodynamics and Confinement 284
Quark-Gluon Plasma 288
Comments on Phenomenology and Comparison with Data 289
Problems 294
Suggested Readings 295

Chapter XIV. Beyond the Standard Model 296

Introductory Remarks 296
Grand Unification 297
Supersymmetry 301
Supergravity, Superstrings 304
Suggested Readings 307

Appendix A Special Relativity 309

Appendix B Spherical Harmonics 313

Appendix C Spherical Bessel Functions 315

Appendix D Basics of Group Theory 317

Appendix E Table of Physical Constants 322

Index 323
