## 1 Introduction

2 The role of the lens in photography

2.1 Imaging
2.2 Recording
2.3 Measurement
2.4 Extension of visual perception
2.5 Self-expression

## 3 Optical requirements

### Optical theory

4 Light and energy

4.1 Dual nature of light
4.2 Wave nature
4.3 The electromagnetic spectrum
4.3.1 The full spectral range
4.3.2 The visible spectrum
4.3.3 Spectral power distribution
4.3.4 Effect on detectors
4.4 Particle nature
4.5 Photometry

5 Properties of light

5.1 Transmission
5.1.1 Transmittance
5.1.2 Colour transmission
5.1.3 Optical transmission density
5.1.4 Optical path length
5.2 Absorption
5.2.1 Absorption law
5.2.2 Spectrally selective absorption
5.2.3 Heat filters
5.2.4 Black filters
5.3 Reflection
5.3.1 Laws of reflection
5.3.2 Types of reflection
5.3.3 Laser speckle
5.3.4 Reflection from dielectric surfaces
5.3.5 Reflection from metal surfaces

5.4 Refraction
5.4.1 Laws of refraction
5.4.2 Total internal reflection
5.4.3 Snell's window
5.4.4 Displacement
5.4.5 Deviation
5.4.6 Scratch treatment
5.4.7 Double refraction
5.4.8 Graded refractive index

5.5 Dispersion
5.5.1 Wavelength dependence
5.5.2 Dispersion by diffraction

5.6 Scattering
5.6.1 Particle size

5.7 Interference
5.7.1 Conditions for interference
5.7.2 Producing interference
5.7.3 Newton's rings
5.7.4 Fringe visibility

5.8 Diffraction
5.8.1 Fraunhofer diffraction
5.8.2 The diffraction grating
5.8.3 The zone plate
5.8.4 Spatial filtering

5.9 Polarization
5.9.1 Natural light
5.9.2 Polarized light and polarizers
5.9.3 Elliptically polarized light
5.9.4 Circularly polarized light

5.10 Attenuation
5.10.1 Inverse square law of illumination
5.10.2 Lambert's cosine law

## 6 Image formation by simple optical systems

6.1 Types of image
6.2 The pinhole
6.3 Simple lenses
6.3.1 Definitions
6.3.2 Focal length

6.4 Simple mirrors
6.4.1 Plane mirrors
6.4.2 Spherical mirrors
6.4.3 Aspherical mirrors

6.5 Image characteristics
6.5.1 Orientation
6.5.2 Shape
6.5.3 Magnification

### Evaluation and calibration

19.1 The need for testing 168
19.2 Infinity tests 168
19.2.1 The collimator 168
19.2.2 The autocollimator 169
19.2.3 Star testing 169

19.3 Resolution testing 170
19.3.1 Lens-testing charts 170
19.3.2 Test target design 171
19.3.3 The Sayce chart 171

19.4 Testing by projection 172
19.4.1 Camera lenses 172
19.4.2 Video diascope projector 172
19.4.3 Slide projectors and enlargers 172
19.4.4 Cine projectors 173

19.5 Test charts for video systems 173
19.6 Field testing 173
19.7 Camera calibration 173
19.7.1 Principal point location 173
19.7.2 Principal distance 174
19.7.3 Laboratory methods 175

19.8 MTF testing 176

20.1 Sharp focus 178
20.1.1 Photographic space 178
20.1.2 Image sharpness 178
20.2 Geometry of focusing 178
20.3 Mechanical arrangements 179
20.3.1 Fixed focus 179
20.3.2 Symbol focusing 180
20.3.3 Unit focusing 180
20.4 Optical methods 180
20.4.1 Supplementary lenses 180
20.4.2 Front cell focusing 180
20.4.3 Internal focusing 181
20.5 Close focusing 182
20.6 Photographic focusing 182
20.6.1 Focusing with non-visible radiations 182
20.6.2 Photographic focus calibration 183

21 Autofocus and focus maintenance methods 186
21.1 Operational needs 186
21.2 Autofocus enlargers 186
21.2.1 Cam systems 186
21.2.2 Inverter systems 186
21.3 Slide projection 187
21.4 Autofocus cameras 188
21.4.1 Ranging systems 188
21.4.2 Image contrast measurement 190
21.4.3 Exit pupil measurements 192
21.5 Autofocus by phase detection 193
21.5.1 Phase detection 193
21.5.2 Principles 193
21.5.3 The autofocus module 195
21.5.4 Detector arrays 195
21.5.5 Autofocus flash assist 196
21.5.6 Additional AF functions 196

22 Depth of field and depth of focus 200
22.1 Depth of field parameters 200
22.1.1 Sharpness 200
22.1.2 Visual acuity 200
22.1.3 Circle of confusion 201

22.2 Depth of field equations 202
22.2.1 Derivation of equations 202
22.2.2 Distribution of depth of field 205

22.3 Depth of field in practice 205
22.3.1 Departures from theory 205
22.3.2 Hyperfocal distance 206
22.3.3 Estimating depth of field 207
22.3.4 Variable field curvature 207

22.4 Close-up depth of field 207
22.4.1 Equations 207
22.4.2 Background sharpness 208
22.4.3 Immersion techniques 208
22.4.4 Holographic techniques 208

22.5 Depth of focus 208
22.5.1 Equations 208
22.5.2 Relationship to depth of field 209
22.5.3 Practical considerations 209
22.5.4 Image surface considerations 209
22.5.5 Electron microscopy 210

22.6 Use of movements 211

22.7 Depth of field scales and calculators 212
22.7.1 Scales 212
22.7.2 Calculators 213
22.7.3 DOF calculators for large format cameras 213

22.8 Special techniques 214
22.8.1 Aerial image relay system 214
22.8.2 Multi-plane scanning 215
22.8.3 Confocal microscopy 215

#### 23 Perspective and projection

- **23.1 Concepts of perspective** 217
  - 23.1.1 Viewpoint 217
  - 23.1.2 Camera viewpoint 218
  - 23.1.3 Viewing distance 219
  - 23.1.4 Perspective distortions 219

- **23.2 Wide-angle perspective** 220

- **23.3 Portrait lens perspective** 221

- **23.4 Perspective of tilted planes** 221

- **23.5 Other perspectives** 222
  - 23.5.1 Orthographic perspective 222
  - 23.5.2 Panoramic perspective 223

- **23.6 Projection formulae** 223

#### 24 Evolution of the photographic lens

- **24.1 Introduction** 227

- **24.2 Prephotography 1800–1839** 227
  - 24.2.1 Optical instruments 227
  - 24.2.2 Optical glass 227
  - 24.2.3 Lens manufacture 228
  - 24.2.4 Lens design 229
  - 24.2.5 The camera obscura 230
  - 24.2.6 The Chevalier Landscape lens 231
  - 24.2.7 Systematic design of lenses 231

- **24.3 The first camera lenses** 231
  - 24.3.1 Optics of the Daguerreotype camera 231
  - 24.3.2 Wolcott mirror camera 232

- **24.4 Astigmatic lenses** 233
  - 24.4.1 Colour correction 233
  - 24.4.2 Achromatic doublets 234
  - 24.4.3 Orthoscopic lenses 234
  - 24.4.4 The Petzval lens 235
  - 24.4.5 The astigmatic lens 236

- **24.5 Anastigmatic lenses** 237
  - 24.5.1 The first anastigmats 237
  - 24.5.2 Symmetrical anastigmats 237
  - 24.5.3 The Cooke triplet 237
  - 24.5.4 Meniscus anastigmats 238

- **24.6 Other types of lenses** 238

#### 25 General properties of a lens

- **25.1 Optical properties** 242
  - 25.1.1 Focal length 242
  - 25.1.2 Aperture 242
  - 25.1.3 Field of view 242
  - 25.1.4 Format 243
  - 25.1.5 Performance 243

- **25.2 Mechanical properties** 245
  - 25.2.1 Configuration data 245
  - 25.2.2 The lens barrel 247
  - 25.2.3 The lens mount 249
  - 25.2.4 Flange focal distance 249
  - 25.2.5 The iris diaphragm 251

- **25.3 Cleaning lens surfaces** 254

#### 26 The standard lens

- **26.1 Standard focal length** 256
- **26.2 Lens designs** 257
- **26.3 Lens limitations** 260

#### 27 Large-aperture lenses

- **27.1 Maximum aperture limits** 261
- **27.2 Aperture requirements** 262
- **27.3 Design features** 262
  - 27.3.1 Standard lenses 262
  - 27.3.2 Wide-angle lenses 263
  - 27.3.3 Long focus lenses 263
  - 27.3.4 Catadioptric lenses 264
  - 27.3.5 Image intensifier optics 264

#### 28 Medium long focus lenses

- **28.1 Lens parameters** 266
- **28.2 Design types** 266
- **28.3 Focusing** 268

#### 29 Extreme long focus lenses

- **29.1 Lens parameters** 269
- **29.2 Resolving power** 269
- **29.3 Lens design** 269
- **29.4 Practical considerations** 270

#### 30 The telephoto lens

- **30.1 The telephoto principle** 272
- **30.2 Design evolution** 272
  - 30.2.1 Early designs 272
  - 30.2.2 Distortion-free designs 273
  - 30.2.3 Modern designs 273
- **30.3 Super telephoto designs** 273

#### 31 Convertible lenses

- **31.1 Design principles** 278
- **31.2 Design variants** 278
  - 31.2.1 Dual focal length 278
  - 31.2.2 Interchangeable components 279
  - 31.2.3 Other possibilities 279

#### 32 Short focus wide-angle lenses

- **32.1 Imaging characteristics** 280
  - 32.1.1 Field of view 280
  - 32.1.2 Covering power 280
  - 32.1.3 Distortion 281
  - 32.1.4 Back focal distance 282
- **32.2 Lens designs** 283

#### 33 Retrofocus wide-angle lenses

- **33.1 The retrofocus principle** 286
  - 33.1.1 Early designs 286
  - 33.1.2 Simple optics 286
  - 33.1.3 Distortion 287
44 Aerial lenses 354
44.1 Environmental considerations 354
44.2 Lens designs 354
44.2.1 Hand-held cameras 354
44.2.2 Reconnaissance lenses 354
44.2.3 Survey lenses 355
45 Projection lenses 359
45.1 Imaging requirements 359
45.1.1 Magnification 359
45.1.2 Field of view 359
45.1.3 Curvature of field 360
45.1.4 Image orientation 360
45.1.5 Image properties 360
45.2 Image photometry 361
45.3 Depth of focus 361
45.4 Lens types 361
45.4.1 Simple and triplet lenses 361
45.4.2 Petzval lens 361
45.4.3 Double Gauss lens 361
45.4.4 Telephoto and retrofocus 362
45.4.5 Varifocal and zoom lenses 363
45.4.6 PC lenses 363
45.5 Lens attachments 363
45.5.1 Zoom attachments 363
45.5.2 Anamorphic attachments 364
45.6 Video projection lenses 364
46 Anamorphic systems 366
46.1 Optical requirements 366
46.2 Optical design principles 366
46.2.1 Crossed slits 366
46.2.2 Cylindrical systems 367
46.2.3 Prismatic systems 367
46.2.4 Mirror systems 369
46.3 Anamorphics in practice 369
47 Soft focus lenses 370
47.1 Imaging requirements 370
47.2 Soft focus methods 370
47.2.1 Conventional lenses 370
47.2.2 Perforated diaphragm plates 371
47.2.3 Floating elements 371
48 Perspective control lenses 373
48.1 Imaging requirements 373
48.2 Tilt and shift lenses 374
48.3 Mechanical arrangements 374
48.4 PC projection lenses 375
49 Ultraviolet lenses 377
49.1 Spectral considerations 377
49.1.1 Spectral transmission 377
49.1.2 Chromatic correction 377
49.2 Contemporary designs 378
49.2.1 Catoptric systems 378
49.2.2 Dioptric systems 378
50 Infra-red lenses 380
50.1 Spectral considerations 380
50.1.1 Imaging regions 380
50.1.2 Optical materials 380
50.2 Contemporary designs 380
50.2.1 Conventional lenses 380
50.2.2 IR corrected lenses 381
50.2.3 Thermal imaging lenses 381
51 Lenses for cinematography 384
51.1 Formats 384
51.2 Design requirements 384
51.3 Operational requirements 384
51.4 8 mm cine lenses 385
51.5 16 mm and 35 mm cine lenses 385
51.5.1 Large aperture lenses 385
51.5.2 Wide-angle lenses 386
51.5.3 Zoom and anamorphic lenses 386
52 Video lenses 388
52.1 Video imaging 388
52.2 Optical performance 388
52.3 Design requirements 389
52.3.1 Mechanical arrangements 389
52.3.2 Colour correction 391
52.4 Lens types 392
52.4.1 Zoom lenses 392
52.4.2 Conventional lenses 393
52.4.3 Special purpose lenses 394
52.5 Lens attachments 394
53 Lens attachments and accessories 398
53.1 Afocal converters 398
53.1.1 Principles 398
53.1.2 Telescopic devices 398
53.1.3 Applications 398
53.2 Teleconverter devices 400
53.2.1 Principles 400
53.2.2 Performance 401
53.3 Attachment of optical systems 401
53.3.1 Microscopes 401
53.3.2 Other devices 402
53.4 Supplementary lenses 403
53.4.1 Positive (close-up) lenses 403
53.4.2 Negative lenses 403
53.5 Optical filters 404
53.5.1 Spectral properties 404
53.5.2 Filter factor 404
53.5.3 Optical quality 405
53.5.4 Filter sizes 406
53.5.5 Focusing 406
53.5.6 Filter applications 406
53.6 Image modification devices 407
53.6.1 Direction sensitive devices 407
53.6.2 Image degradation devices 408
Photographic optical systems

54 Viewfinder systems 413

54.1 Viewfinder functions 413
54.2 Human vision 413
  54.2.1 Anatomy 413
  54.2.2 Refraction 415
  54.2.3 Resolving power 415
  54.2.4 Dark adaptation 415
  54.2.5 Flicker 415
54.3 Viewfinder properties 416
  54.3.1 Magnification 416
  54.3.2 Image orientation 416
  54.3.3 Aberrations 417
54.4 Viewfinder errors 417
  54.4.1 Aiming errors 417
  54.4.2 Parallax error 418
54.5 Interactive viewfinders 418

55 Direct viewfinder systems 420

55.1 The frame finder 420
55.2 The brilliant finder 420
55.3 The Newton finder 420
55.4 The reversed Galilean finder 421
55.5 The van Albeda finder 422
55.6 The universal finder 423
  55.6.1 The zoom finder 423
  55.6.2 The Kepler finder 423
  55.6.3 The universal range-viewfinder 425
  55.6.4 The director's viewfinder 425
55.7 Viewfinders for autofocus compact cameras 425

56 Screen viewfinder systems 427

56.1 The focusing screen 427
  56.1.1 Screen properties 427
  56.1.2 Screen variants 427
  56.1.3 The screen image 427
  56.1.4 The focusing magnifier 428
56.2 Reflex systems 429
  56.2.1 Image properties 429
  56.2.2 The reflex mirror 430
56.3 The pentaprism viewfinder 434
56.4 The viewfinder eyepiece 435
  56.4.1 Optical principles 435
  56.4.2 The focusing telescope 436
  56.4.3 Eyepiece dioptic correction 436
56.5 Video viewfinders 437

57 Viewfinder focusing 438

57.1 The human factor 438
57.2 Simple focusing systems 438
57.2.1 Focusing by estimation 438
57.2.2 Stadiametric rangefinders 438
57.3 Optical coincidence rangefinders 439
  57.3.1 Principles 439
  57.3.2 Coupled rangefinder 439
  57.3.3 Rangefinder accuracy 441
57.4 Screen focusing 441
  57.4.1 Focusing accuracy 441
  57.4.2 Contrast characteristics 443
  57.4.3 Special focusing techniques 443
57.5 Passive focusing aids 443
  57.5.1 The split-image rangefinder 443
  57.5.2 Microprism arrays 444

58 The optics of camera movements 448

58.1 Degrees of freedom 448
  58.1.1 View camera design 448
  58.1.2 Translation movements 448
  58.1.3 Rotation movements 448
58.2 Lens covering power 449
  58.2.1 Extra covering power 449
  58.2.2 Displacement limits 450
58.3 Control of image sharpness 450
  58.3.1 Tilts and swings 450
  58.3.2 Limits 451
  58.3.3 The Scheimpflug rule or condition 452
  58.3.4 Yaw-free movements 454
  58.4 Control of image shape 455

59 Optics of systems with moving film 457

59.1 Intermittent motion 457
  59.1.1 Framing rate 457
  59.1.2 Image quality 457
  59.1.3 Limitations 458
59.2 Continuous motion 458
  59.2.1 Image motion compensation 458
  59.2.2 The strip camera 459
  59.2.3 The streak camera 459
  59.2.4 The periphery camera 460
  59.2.5 The panoramic camera 460
59.3 Rotating prism compensators 462
  59.3.1 Image displacement 462
  59.3.2 Practical systems 462
  59.4 Image stabilization 463
  59.4.1 Camera shake 463
  59.4.2 Stabilizing systems 464

60 Scanning optics 467

60.1 Scanning systems 467
  60.1.1 Mechanical scanning 467
  60.1.2 Rotating mirror systems 467
  60.1.3 Nipkow disc system 467
  60.1.4 Airborne scanners 468
60.2 Film scanning 469
60.3 Laser scanning 470
  60.3.1 Polygon scanners 470
  60.3.2 Scanning lenses 472
  60.3.3 Dot generation 473
Contents

66.2 Light meters
   66.2.1 The photodetector 539
   66.2.2 Acceptance angle 541
   66.2.3 Spot meters 541
   66.2.4 Optical attachments 541
   66.2.5 Incident light measurements 542

66.3 In-camera metering systems
   66.3.1 Photocell location 543
   66.3.2 Photocell optics 545
   66.3.3 Segmented photocells 546
   66.3.4 OTF measurements 546

67 Optics of lighting systems
   67.1 Lighting 549
      67.1.1 Attributes 549
      67.1.2 Illumination 549
      67.1.3 Lighting ratio 549
      67.1.4 Shadows 549
      67.1.5 Artificial sources 550
   67.2 Daylight 551
   67.3 Luminaires
      67.3.1 Spotlights 553
      67.3.2 Floodlights 554
      67.3.3 Fibre optic systems 554
   67.4 Electronic flash
      67.4.1 Optics of flash units 556

67.4.2 Red eye effects 557
67.4.3 Flash guide number 557

68 Optics for video systems 559
   68.1 Video cameras 559
      68.1.1 The colour splitter 559
      68.1.2 The three-chip camera 559
      68.1.3 Aliasing 561
      68.1.4 Spatial offset 562
      68.1.5 Filter arrays 562
   68.2 Optical multiplexing 563
   68.3 Telecine 564
   68.4 Video disc 564

69 Optics of holography 567
   69.1 Outline theory 567
      69.1.1 Wavefront reconstruction 567
      69.1.2 Mathematical outline 567
      69.1.3 Fringe patterns 568
      69.1.4 Hologram properties 568
   69.2 Holographic techniques 569
      69.2.1 Illumination system 569
      69.2.2 Recording requirements 570
