CONTENTS

3.3 Summary 60
3.4 Electrocyclic processes in heterocyclic ring synthesis 61
3.5 Nitrenes in heterocyclic ring synthesis 62
References for chapter 3 63

4 Typical reactivity of pyridines, quinolines and isoquinolines 64

5 Pyridines: reactions and synthesis 72
  5.1 Reactions with electrophilic reagents 73
  5.2 Reactions with oxidising agents 79
  5.3 Reactions with nucleophilic reagents 80
  5.4 Reactions with bases 82
  5.5 Reactions of C-metallated pyridines 83
  5.6 Reactions with radical reagents 85
  5.7 Reactions with reducing agents 86
  5.8 Electrocyclic reactions (ground state) 87
  5.9 Photochemical reactions 88
  5.10 Oxy- and aminopyridines 89
  5.11 Alkylpyridines 94
  5.12 Pyridine aldehydes, ketones, carboxylic acids and esters 95
  5.13 Quaternary pyridinium salts 95
  5.14 Pyridine N-oxides 101
  5.15 Synthesis of pyridines 104
References for chapter 5 111
Exercises for chapter 5 118

6 Quinolines and isoquinolines: reactions and synthesis 120
  6.1 Reactions with electrophilic reagents 121
  6.2 Reactions with oxidising agents 123
  6.3 Reactions with nucleophilic reagents 123
  6.4 Reactions with bases 125
  6.5 Reactions of C-metallated quinolines and isoquinolines 126
  6.6 Reactions with radical reagents 126
  6.7 Reactions with reducing agents 126
  6.8 Electrocyclic reactions (ground state) 127
  6.9 Photochemical reactions 128
  6.10 Oxyquinolines and -isoquinolines 128
  6.11 Aminoquinolines and -isoquinolines 130
  6.12 Alkylquinolines and -isoquinolines 130
  6.13 Quinoline and isoquinoline carboxylic acids and esters 130
  6.14 Quaternary quinolinium and isoquinolinium salts 131
  6.15 Quinoline and isoquinoline N-oxides 132
  6.16 Synthesis of quinolines and isoquinolines 133
### 7 Typical reactivity of pyrylium and benzopyrylium ions, pyrones and benzopyrones

- References for chapter 6: 141
- Exercises for chapter 6: 144

### 8 Pyryliums, 2- and 4-pyrones: reactions and synthesis

8.1 Reactions of pyrylium cations: 148
8.2 \(\alpha\)-Pyrones and \(\gamma\)-pyrones (2\(H\)-pyran-2-ones and 4\(H\)-pyran-4-ones): 153
8.3 Synthesis of pyryliums: 157
8.4 Synthesis of \(\alpha\)-pyrones: 159
8.5 Synthesis of \(\gamma\)-pyrones: 161
- References for chapter 8: 162
- Exercises for chapter 8: 165

### 9 Benzopyryliums and benzopyrones: reactions and synthesis

9.1 Reactions of benzopyryliums: 167
9.2 Benzopyrones (chromones, coumarins and isocoumarins): 170
9.3 Synthesis of benzopyryliums, chromones, coumarins and isocoumarins: 176
- References for chapter 9: 181
- Exercises for chapter 9: 184

### 10 Typical reactivity of the diazines: pyridazine, pyrimidine and pyrazine

### 11 The diazines: pyridazine, pyrimidine and pyrazine: reactions and synthesis

11.1 Reactions with electrophilic reagents: 191
11.2 Reactions with oxidising agents: 193
11.3 Reactions with nucleophilic reagents: 193
11.4 Reactions with bases: 196
11.5 Reactions of \(C\)-metallated diazines: 196
11.6 Reactions with reducing agents: 198
11.7 Reactions with radical reagents: 198
11.8 Electrocyclic and photochemical reactions: 199
11.9 Diazine \(N\)-oxides: 200
11.10 Oxydiazines: 201
11.11 Aminodiazines: 208
11.12 Alkyldiazines: 209
11.13 Synthesis of diazines: 210
12 Typical reactivity of pyroles, thiophenes and furans 225

13 Pyroles: reactions and synthesis 229
13.1 Reactions with electrophilic reagents 231
13.2 Reactions with oxidising agents 238
13.3 Reactions with nucleophilic reagents 239
13.4 Reactions with bases 239
13.5 Reactions of N-metallated pyroles 240
13.6 Reactions of C-metallated pyroles 240
13.7 Reactions with radical reagents 241
13.8 Reactions with reducing agents 241
13.9 Electrocyclic reactions (ground state) 242
13.10 Reactions with carbenes 243
13.11 Photochemical reactions 243
13.12 Pyrryl-C-X compounds 244
13.13 Pyrrole aldehydes and ketones 244
13.14 Pyrrole carboxylic acids 244
13.15 Pyrrole carboxylic acid esters 245
13.16 Halopyrroles 245
13.17 Oxy- and aminopyrroles 246
13.18 Synthesis of pyroles 247
References for chapter 13 253
Exercises for chapter 13 257

14 Thiophenes: reactions and synthesis 259
14.1 Reactions with electrophilic reagents 260
14.2 Reactions with oxidising agents 264
14.3 Reactions with nucleophilic reagents 264
14.4 Reactions with bases 265
14.5 Reactions of C-metallated thiophenes 265
14.6 Reactions with radical reagents 267
14.7 Reactions with reducing agents 267
14.8 Electrocyclic reactions (ground state) 268
14.9 Photochemical reactions 269
14.10 Thiophene-C-X compounds: thienyl derivatives 269
14.11 Thiophene aldehydes and ketones, and carboxylic acids and esters 269
14.12 Oxy- and aminothiophenes 270
14.13 Synthesis of thiophenes 271
References for chapter 14 274
Exercises for chapter 14 277
### 15 Furans: reactions and synthesis

15.1 Reactions with electrophilic reagents 279
15.2 Reactions with oxidising agents 282
15.3 Reactions with nucleophilic reagents 283
15.4 Reactions with bases 283
15.5 Reactions of C-metallated furans 284
15.6 Reactions with radical reagents 285
15.7 Reactions with reducing agents 285
15.8 Electrocyclic reactions (ground state) 285
15.9 Photochemical reactions 287
15.10 Furfuryl-C-X compounds; side-chain properties 287
15.11 Furan carboxylic acids and esters 287
15.12 Oxy- and aminofurans 288
15.13 Synthesis of furans 290

References for chapter 15 295
Exercises for chapter 15 299

### 16 Reactivity of indoles, benzo[b]thiophenes, benzo[b]furans, isoindoles, benzo[c]thiophenes and isobenzofurans

16.1 Reactions with electrophilic reagents 307
16.2 Reactions with oxidising agents 316
16.3 Reactions with nucleophilic reagents 317
16.4 Reactions with bases 318
16.5 Reactions of N-metallated indoles 319
16.6 Reactions of C-metallated indoles 320
16.7 Reactions with radicals 322
16.8 Reactions with reducing agents 322
16.9 Reactions with carbenes 323
16.10 Electrocyclic and photochemical reactions 324
16.11 Alkylindoles 325
16.12 Reactions of indolyl-C-X compounds 326
16.13 Indole carboxylic acids 327
16.14 Oxyindoles 327
16.15 Aminoindoles 330
16.16 Synthesis of indoles 330

References for chapter 17 341
Exercises for chapter 17 348

### 18 Benzo[b]thiophenes and benzo[b]furans: reactions and synthesis

18.1 Reactions with electrophilic reagents 350
18.2 Reactions with nucleophilic reagents 352
18.3 Reactions with bases; reactions of C-metallated benz[b]thiophenes and benzo[b]furans 352
18.4 Reactions with reducing agents 353
18.5 Oxy- and amino-benzothiophenes and -benzofurans 354
18.6 Synthesis of benzo[b]thiophenes and benzo[b]furans 354
References for chapter 18 357
Exercises for chapter 18 359

19 Isoindoles, benzo[c]thiophenes and isobenzofurans: reactions and synthesis 360
19.1 Reactions with electrophilic reagents 361
19.2 Electrocyclic reactions (ground state) 361
19.3 Phthalocyanines 362
19.4 Synthesis of isoindoles, benzo[c]thiophenes and isobenzofurans 362
References for chapter 19 365
Exercises for chapter 19 366

20 Typical reactivity of 1,3- and 1,2-azoles 367

21 1,3-Azoles: imidazoles, thiazoles and oxazoles: reactions and synthesis 370
21.1 Reactions with electrophilic reagents 371
21.2 Reactions with oxidising agents 375
21.3 Reactions with nucleophilic reagents 376
21.4 Reactions with bases 376
21.5 Reactions of N-metallated imidazoles 377
21.6 Reactions of C-metallated 1,3-azoles 377
21.7 Reactions with reducing agents 378
21.8 Electrocyclic and photochemical reactions 378
21.9 Alkyl-1,3-azoles 380
21.10 Quaternary 1,3-azolium salts 381
21.11 Oxy- and amino-1,3-azoles 382
21.12 Synthesis of 1,3-azoles 384
References for chapter 21 388
Exercises for chapter 21 392

22 1,2-Azoles: pyrazoles, isothiazoles and isoxazoles: reactions and synthesis 394
22.1 Reactions with electrophilic reagents 395
22.2 Reactions with oxidising agents 396
22.3 Reactions with nucleophilic reagents 397
22.4 Reactions with bases 397
CONTENTS

22.5 Reactions of $N$-metallated pyrazoles 398
22.6 Reactions of C-metallated 1,2-azoles 398
22.7 Reactions with reducing agents 399
22.8 Electrocyclic and photochemical reactions 399
22.9 Alkyl-1,2-azoles 400
22.10 Quaternary 1,2-azolium salts 400
22.11 Oxy- and amino-1,2-azoles 401
22.12 Synthesis of 1,2-azoles 402
References for chapter 22 405
Exercises for chapter 22 407

23 Purines: reactions and synthesis 409
23.1 Nucleic acids, nucleosides and nucleotides 411
23.2 Reactions with electrophilic reagents 412
23.3 Reactions with radical reagents 416
23.4 Reactions with oxidising agents 417
23.5 Reactions with reducing agents 417
23.6 Reactions with nucleophilic reagents 417
23.7 Reactions with bases 419
23.8 Reactions of $N$-metallated purines 420
23.9 Reactions of C-metallated purines 420
23.10 Oxy- and aminopurines 421
23.11 Alkylpurines 425
23.12 Purine carboxylic acids 425
23.13 Synthesis of purines 425
References for chapter 23 430
Exercises for chapter 23 433

24 Heterocycles containing a ring-junction nitrogen 434
24.1 Indolizines 435
24.2 Aza-indolizines 437
24.3 Quinoliziniums and related systems 441
24.4 Pyrrolizines and related systems 442
24.5 Cyclazines 443
References for chapter 24 444
Exercises for chapter 24 445

25 Heterocycles containing more than two hetero atoms 447
25.1 Five-membered rings 448
25.2 Six-membered rings 457
References for chapter 25 459
Exercises for chapter 25 462
26 Saturated and partially unsaturated heterocyclic compounds: reactions and synthesis 463
  26.1 Five- and six-membered rings 464
  26.2 Three-membered rings 468
  26.3 Four-membered rings 471
  26.4 Metallation 472
  26.5 Ring synthesis 473
References for chapter 26 476

27 Appendix: answers to exercises 479
