Preface ................................................................. 5

§1 Some Information on the Theory of Operators in a Hilbert Space . 7
  1.1. Linear Operators. Closed Operators ...................... 7
  1.2. The Adjoint Operator ..................................... 8
  1.3. Self-Adjoint Operators ................................... 8
  1.4. The Spectrum of an Operator ............................ 9
  1.5. Spectral Measure. The Spectral Theorem for Self-Adjoint
       Operators .................................................. 9
  1.6. The Pure Point, Absolutely Continuous, and Continuous
       Singular Components of a Self-Adjoint Operator ....... 11
  1.7. Other Formulations of the Spectral Theorem ............ 12
  1.8. Semi-Bounded Operators and Forms ..................... 13
  1.9. The Friedrichs Extension ................................ 15
  1.10. Variational Triples ..................................... 15
  1.11. The Distribution Function of the Spectrum.
       The Spectral Function ...................................... 16
  1.12. Compact Operators .................................... 18

§2 Defining Differential Operators. Essential Self-Adjointness ..... 19
  2.1. Differential Expressions and Their Symbols ........... 19
  2.2. Elliptic Differential Expressions ....................... 20
  2.3. The Maximal and Minimal Operators .................... 21
2.4. Essential Self-Adjointness of Elliptic Operators .................. 23
2.5. Singular Differential Operators ............................ 25
2.6. The Schrödinger Operator .................................. 26
2.7. The Schrödinger Operator: Local Singularities of the Potential .................. 29
2.8. The Dirac Operator ........................................... 30

§3 Defining an Operator by a Quadratic Form ...................... 31
3.1. Examples ....................................................... 32
3.2. The Schrödinger Operator and Its Generalizations ............ 34
3.3. Non-Semi-Bounded Potentials ................................ 35
3.4. Weighted Polyharmonic Operator ............................. 36

§4 Examples of Exact Computation of the Spectrum ............... 38
4.1. Operators with Constant Coefficients on $\mathbb{R}^n$ and on a Torus .... 38
4.2. The Factorization Method ................................... 40
4.3. Operators on a Sphere and a Hemisphere ..................... 41

§5 Differential Operators with Discrete Spectrum.
Estimates of Eigenvalues ........................................ 42
5.1. Basic Examples of Differential Operators with Discrete Spectrum .................. 43
5.2. Estimates of Eigenvalues .................................... 44
5.3. Estimates of the Spectrum of a Weighted Polyharmonic Operator .................. 46
5.4. Estimates of the Spectrum: Heuristic Approach ................ 48
5.5. Estimates of Eigenfunctions .................................. 49

§6 Differential Operators with Non-Empty Essential Spectrum ..... 50
6.2. Essential Spectrum of the Schrödinger Operator with Decreasing Potential .................. 51
6.3. Negative Spectrum of the Schrödinger Operator ................ 51
6.4. The Dirac Operator ........................................... 54
6.5. Eigenvalues within the Continuous Spectrum .................. 55
6.6. On the Essential Spectrum of the Stokes Operator ........... 56

§7 Multiparticle Schrödinger Operator ............................ 56
7.1. Definition of the Operator. Centre of Mass Separation ........... 56
7.2. Subsystems. Essential Spectrum ............................. 58
7.3. Eigenvalues .................................................. 60
7.4. Refinement of the Physical Model ............................ 61
§8 Investigation of the Spectrum by the Methods of Perturbation Theory ........................................... 62
  8.1. The Rayleigh-Schrödinger Series .................................................. 63
  8.2. Typical Spectral Properties of Elliptic Operators ...................... 64
  8.3. The Asymptotic Rayleigh-Schrödinger Series ....................... 65
  8.4. Singular Perturbations .......................................................... 66
  8.5. Semiclassical Asymptotics .................................................... 66

§9 Asymptotic Behaviour of the Spectrum. I. Preliminary Remarks ....... 68
  9.1. Two Forms of Asymptotic Formulae ......................................... 68
  9.2. Formulae for the Leading Term of the Asymptotics .................. 69
  9.3. The Weyl Asymptotics for Regular Elliptic Operators .............. 71
  9.4. Refinement of the Asymptotic Formulae .................................. 74
  9.5. Spectrum with Accumulation Point at 0 .................................. 76
  9.6. Semiclassical Asymptotics .................................................... 77
  9.7. Survey of Methods for Obtaining Asymptotic Formulae ............. 78

§10 Asymptotic Behaviour of the Spectrum. II. Operators with ‘Non-Weyl’ Asymptotics ............................................ 81
  10.1. The General Scheme .......................................................... 81
  10.2. The Operator \(-\Delta_D\) in Infinite Horn-Shaped Domains ........ 82
  10.3. Elliptic Operators Degenerate at the Boundary of the Domain .................. 83
  10.4. Hypoelliptic Operators with Double Characteristics .......... 84
  10.5. The Cohn-Laplace Operator ................................................ 85
  10.6. The \(n\)-Dimensional Schrödinger Operator with Homogeneous Potential .......................... 86
  10.7. Compact Operators with Non-Weyl Asymptotic Behaviour of the Spectrum ................. 88

§11 Variational Technique in Problems on Spectral Asymptotics ..... 89
  11.1. Continuity of Asymptotic Coefficients .................................. 89
  11.2. Outline of the Proof of Formula (9.25) .................................. 90
  11.3. Other Applications of the Variational Method .................... 91
  11.4. Problems with Constraints ................................................ 94

§12 The Resolvent and Parabolic Methods. Spectral Geometry .......... 96
  12.1. The Resolvent Method ........................................................ 96
  12.2. The Case of Non-Weyl Asymptotic Behaviour of the Spectrum ................. 99
  12.3. Refinement of the Asymptotic Formulae ................................ 100
  12.4. The Parabolic Equation Method .......................................... 101
  12.5. Complete Asymptotic Expansion of the \(\theta\)-Function ............ 103
  12.6. Spectral Geometry .......................................................... 104
  12.7. Computation of Coefficients ............................................. 105
12.8. The Problem of Reconstructing the Metric from the Spectrum ........................................ 106
12.9. Connection with Probability Theory .......................................................... 108

§13 The Hyperbolic Equation Method ................................................................. 108
13.1. Tauberian Theorem for the Fourier Transform ......................................... 109
13.2. Outline of the Method .......................................................... 112
13.3. Global Fourier Integral Operators .......................................................... 115
13.4. Remarks on Other Problems. Reflection and Branching of Bicharacteristics .......................................................... 121
13.5. Normal Singularity. Two-Term Asymptotic Formulae ............................. 126
13.6. Other Results .......................................................... 128

§14 Bicharacteristics and Spectrum ................................................................. 131
14.1. The General Two-Term Asymptotic Formula ........................................ 132
14.2. Operators with Periodic Bicharacteristic Flow ..................................... 135
14.3. 'Weak' Non-Zero Singularities of $a(t)$ ................................................... 137
14.4. Quasimodes .......................................................... 139
14.5. Construction of Quasimodes .......................................................... 140

§15 Approximate Spectral Projection Method .................................................. 143
15.1. The Basic Concept .......................................................... 143
15.2. Operator Estimates .......................................................... 145
15.3. Construction of an Approximate Spectral Projection ......................... 147
15.4. Some Precise Formulations .......................................................... 149

§16 The Laplace Operator on Homogeneous Spaces and on Fundamental Domains of Discrete Groups of Motions .................................................. 157
16.1. Preliminary Remarks .......................................................... 157
16.2. The Automorphic Laplace Operator .................................................. 158
16.3. The Laplace Operator on a Flat Torus. The Poisson Formula .................... 158
16.4. The Case of Spaces of Constant Negative Curvature .................................. 160
16.5. The Case of Spaces of Constant Positive Curvature ............................... 161
16.6. Isospectral Families of Nilmanifolds .................................................. 164
16.7. Sunada's Technique and Solution of Kac's Problem ............................... 165

§17 Operators with Periodic Coefficients .................................................. 169
17.1. Bloch Functions and the Zone Structure of the Spectrum of an Operator with Periodic Coefficients .................................................. 169
17.2. The Character of the Spectrum of an Operator with Periodic Coefficients .................................................. 177
17.3. Quantitative Characteristics of the Spectrum: Global Quasimomentum, Rotation Number, Density of States, and Spectral Function .................................................. 180
§18 Operators with Almost Periodic Coefficients .......................... 186
18.2. General Properties of the Spectrum and Eigenfunctions ....... 188
18.3. The Spectrum of the One-Dimensional Schrödinger
    Operator with an Almost Periodic Potential .................. 192
18.4. The Density of States of an Operator with Almost Periodic
    Coefficients ............................................. 197
18.5. Interpretation of the Density of States with the Aid
    of von Neumann Algebras and Its Properties .................. 199

§19 Operators with Random Coefficients ................................. 206
19.1. Translation Homogeneous Random Fields .......................... 207
19.2. Random Differential Operators ................................. 212
19.3. Essential Self-Adjointness and Spectra ....................... 214
19.4. Density of States ......................................... 217
19.5. The Character of the Spectrum. Anderson Localization ...... 220

§20 Non-Self-Adjoint Differential Operators that Are Close
    to Self-Adjoint Ones ...................................... 222
20.1. Preliminary Remarks ....................................... 222
20.2. Basic Examples ........................................... 225
20.3. Completeness Theorems .................................... 226
20.4. Expansion and Summability Theorems.
    Asymptotic Behaviour of the Spectrum ....................... 228
20.5. Application to Differential Operators ....................... 230

Comments on the Literature ............................................ 234
