Contents

1 The handling of time: introduction and survey 1
   1.1 Introduction 1
      1.1.1 Short survey of uses 2
      1.1.2 The declarative view 6
      1.1.3 The procedural and the imperative views 17
      1.1.4 Mathematical studies 19
   1.2 How to present a temporal logic in the predicate calculus 19
   1.3 Semantic presentation of temporal connectives 24
   1.4 Axiomatic presentation of temporal logic 28
   1.5 Algorithmic proof presentation of temporal logic 38
   1.6 Expressive power of temporal connectives 41
   1.7 Fixed point extensions 47
   1.8 H-dimension 51
   1.9 Decidability 53
   1.10 Sample application to computing, 1 55
   1.11 Another application 59

2 Semantical presentation of temporal connectives 67
   2.1 The flow of time 67
   2.2 The assignment to the atoms 73
   2.3 The connectives 76
   2.4 In search of a good temporal logic 81

3 Axiomatic presentation of propositional temporal connectives 91
   3.1 Introduction 91
   3.2 The Hilbert system $K_t$ 92
   3.3 Filtration for $K_t$ 99

10.3.1 Introduction 375
10.3.2 Pre-eliminations 378
10.3.3 Eliminations 382
10.3.4 Induction 386

11 Expressive completeness of Stavi connectives over general linear time 393
11.1 Introduction 393
11.2 Failure of separation 393
11.3 A language $L^*$ for evaluation at gaps 396
11.4 Equivalence of $L^*$ and the Stavi connectives 401
11.5 Separation results 410

12 Further expressive completeness results 415
12.1 Introduction 415
12.2 Gaps in the flow of time 415
12.3 Connectives to talk about gaps 417
12.3.1 Construction of a non-ordinal order definable gap 418
12.4 Expressive power 419
12.5 Other connectives 424
12.6 An axiomatization of $U, S, \gamma_{0}^{\pm}$ using the irreflexivity rule 425
12.7 Unranked gaps and scattered flows of time 428
12.8 Expressive completeness of $U, S$ and Stavi connectives over linear time 432

13 H-dimension 447
13.1 Introduction 447
13.2 Expressive completeness and finite H-dimension 453
13.3 Expressive completeness in higher dimensions 459
13.4 H-dimension and interpretations 462
13.4.1 Introduction 462
13.4.2 Defining a structure in another 462
13.4.3 Constructions 464
13.4.4 Constructions and H-dimension 467
13.4.5 Constructions and expressive completeness 469
13.5 Covering theorems 472
13.5.1 Canonical structures 475
13.5.2 Canonical structures and H-dimension 486
13.5.3 Connectives for canonical structures 488
13.5.4 The covering theorem 490
13.5.5 The comb 492
13.5.6 Counterexamples 493
13.6 The $k$-variable property 494
  13.6.1 The $k$-variable property and H-dimension 495
  13.6.2 Syntactic aspects of the $k$-variable property 496
  13.6.3 Expressive completeness 497
  13.6.4 First-order definable classes 500
  13.6.5 $\omega$-saturated structures 503
  13.6.6 Back-and-forth systems 505
  13.6.7 Linear orders have the three-variable property 509
  13.6.8 Games and the $k$-variable property 510
13.7 H-dimension and expressive completeness 515
  13.7.1 Circles 516
  13.7.2 Circles and H-dimension 517
  13.7.3 Circles and expressive completeness 518
  13.7.4 Circle-like flows of time 519

14 Adding a temporal dimension to a logic system 523
  14.1 Introduction 523
  14.2 Temporalizing an existing logic 527
    14.2.1 The logic T 528
    14.2.2 Logic systems and their temporalized form 529
    14.2.3 The correspondence mapping 535
    14.2.4 Completeness of $T(L)$ 536
  14.3 The decidability of $T(L)$ and its complexity 539
  14.4 Conservativeness of $T(L)$ 541
  14.5 Separation over the added dimension 542
  14.6 Temporalizing first-order logic 545
    14.6.1 Temporalizing first-order sentences 546
    14.6.2 Temporalizing first-order formulae 547
  14.7 Internalizing the temporal dimension 550
  14.8 Generalizations 552

15 Decidability in temporal logic 553
  15.1 Introduction 553
  15.2 Monadic second-order logic 554
  15.3 Decision problem for temporal logic 556
    15.3.1 Definitions 556
    15.3.2 Results 557
    15.3.3 Techniques 559
  15.4 Decidability results 560
    15.4.1 The real numbers 560
    15.4.2 Rabin's theorem 561
15.4.3 The integers and natural numbers 561
15.4.4 Finite linear orders 562
15.4.5 The rationals 563
15.4.6 Other classes of linear orders 564
15.4.7 The class of all well-ordered flows 565
15.4.8 Circles 565
15.4.9 Trees 565
15.5 Undecidability results 566
  15.5.1 The class of all flows of time 566
  15.5.2 The real numbers 567
  15.5.3 Other classes 567
  15.5.4 The class of all well-ordered flows 569
15.6 Covering theorem and decidability 571
15.7 Decidability of earlier systems 574
15.8 Complexity 580
  15.8.1 PSPACE-completeness 581
