Contents

Preface xi

Mathematics of Computation: A brief history
EUGENE ISAACSON xvii

Part I. Symposium on Numerical Analysis

Invited Papers

On the development of multigrid methods and their analysis
JAMES H. BRAMBLE 5

An introduction to inverse problems
MARGARET CHENEY 21

Algorithms for unconstrained optimization: A review of recent developments
DONALD GOLDFARB 33

A survey of componentwise perturbation theory in numerical linear algebra
NICHOLAS J. HIGHAM 49

Numerical evaluation of special functions
D. W. LOZIER AND F. W. J. OLVER 79

A survey of numerical cubature over triangles
J. N. LYNESS AND RONALD COOLS 127

New trends in the use and analysis of integral equations
J. C. NÉDÉLEC 151

Applications of multivariate splines
LARRY L. SCHUMAKER 177

Initial value problems for ordinary differential equations: Development of ideas, techniques, and implementation
HANS J. STETTER 205
Multiresolution methods for partial differential equations

ROGER TEMAM 225

Contributed Papers

A comparison of techniques for solving ill-conditioned problems arising from the immersed boundary method
LOYCE ADAMS AND ZHIYUN YANG 243

A mixed spectral-collocation and operator splitting method for the Wigner-Poisson equation
ANTON ARNOLD 249

Finite volume methods for irregular one-dimensional grids
M. J. BERGER, R. J. LEVEQUE, AND L. G. STERN 255

Linear rational interpolation of continuous functions over an interval
JEAN-PAUL BERRUT 261

A von Neumann reflection for the 2-D Burgers equation
M. BRI O AND J. K. HUNTER 265

Slow evolution from the boundary: A new stabilizing constraint in ill-posed continuation problems
ALFRED S. CARASSO 269

A finite element method for the 2D drift-diffusion semiconductor model
ZHANGXIN CHEN 275

Splitting functions and numerical analysis of WR-type methods for evolutionary and stationary problems
S. DE MARCHI, M. VIANNELLO, AND R. ZANOVELLO 281

Error estimates for a quadrature rule for Cauchy principal value integrals
KAI DIETHELM 287

A numerical radius approach to stable difference schemes for parabolic systems
MOSHE GOLDBERG 293

An extension of the Olver-Sookne method for the solution of second-order linear difference equations
TAKEMITSU HASEGAWA AND TATSUO TORII 297

The Faber polynomials for circular arcs
MATTHEW HE 301
Finite element approximation for optimal control of electrically conducting fluid flows
L. S. Hou and S. S. Ravindran 305

ADI methods for heat equations with discontinuities along an arbitrary interface
Zhilin Li and Anita Mayo 311

Eigenvalue approximation of Fredholm integral operators
E. B. Lin 317

Spectral methods for singular perturbation problems
Wenbin Liu and Tao Tang 323

A quaternion-Jacobi method for symmetric matrices
Niloufer Mackey 327

On constructing Chebyshev series solutions of differential equations
Allan J. MacLeod 333

Multiquadric collocation methods in the numerical solution of Volterra integral and integro-differential equations
Athena Makroglou 337

Methods for solving large eigenvalue problems associated with configuration interaction electronic structure calculations
Kristyn J. Maschhoff 343

Computing limiting normals to real surfaces
Donal O'Shea and Les Wilson 349

Orthogonal spline collocation solution of nonlinear Schrödinger equations
Mark P. Robinson 355

Who invented the computer? The debate from the viewpoint of computer architecture
Raúl Rojas 361

Locking and boundary layer effects in the finite element approximation of the Reissner-Mindlin plate model
Christoph Schwab and Manil Suri 367

Efficient spectral Galerkin methods for some elliptic problems
Jie Shen 373

Periodic solutions of higher-order difference equations in two independent variables
Qin Sheng and Ravi P. Agarwal 377
Front tracking based on high-resolution wave propagation methods
   Keh-Ming Shyue 383

Time-splitting methods for nonhomogeneous conservation laws
   Tao Tang and Zhen-Huan Teng 389

Numerical aspects of uniform Airy-type asymptotic expansions
   N. M. Temme 395

Local dynamics and bifurcation consistencies of continuous-time dynamical
systems and their numerical discretizations
   Xin Wang, Edward K. Blum, and Qingsnan Li 399

Computing integrals of the complex error function
   J. A. C. Weideman 403

Quadratures for improper integrals and their applications in integral equations
   Yuesheng Xu and Yunhe Zhao 409

Spline harmonic analysis and wavelet bases
   Valery A. Zheludev 415

Part II. Minisymposium on Computational Number Theory
   Dedicated to the memory of Derrick Henry Lehmer

Invited Papers

Algorithms for quadratic orders
   Ingrid Biehl and Johannes Buchmann 425

Analytic computations in number theory
   Andrew M. Odlyzko 451

The number field sieve
   Carl Pomerance 465

Factoring integers before computers
   H. C. Williams and J. O. Shallit 481

Contributed Papers

Explicit bounds for primes in residue classes
   Eric Bach and Jonathan Sorenson 535

Ramanujan and Euler's constant
   Richard P. Brent 541
CONTENTS

Congruential sieves on FPGA computers
NATHAN D. BRONSON AND DUNCAN A. BUELL 547

Lehmer pairs of zeros and the Riemann $\xi$-function
GEORGE CSORDAS, WAYNE SMITH, AND RICHARD S. VARGA 553

A record Aliquot sequence
ANDREW W. P. GUY AND RICHARD K. GUY 557

Implications of computational mathematics for the philosophy of mathematics
ANDREW J. LAZARUS 561

Square roots of products of algebraic numbers
PETER L. MONTGOMERY 567

A locally parameterized version of Lehmer's problem
GARY A. RAY 573

A new method for finding amicable pairs
H. J. J. TE RIELE 577

Generalized Fermat numbers
HANS RIESEL AND ANDERS BJÖRN 583

Evaluation of $\zeta_K(2)$ for some totally real algebraic number fields $K$ of degree 9
KISAO TAKEUCHI 589

The period of the Bell exponential integers modulo a prime
SAMUEL S. WAGSTAFF, JR. 595

Computing invariant polynomials of $p$-adic reflection groups
CHANGSHENG XU 599

Author Index 603

Subject Index 619
