Contents

Preface ix

Adhesion measurement of films and coatings: a commentary
K. L. Mittal 1

Adherence failure and measurement: some troubling questions
S. D. Brown 15

Measurement of adhesion for thermally sprayed materials
C. C. Berndt and C. K. Lin 41

Adhesion measurement of thin metal films by scratch, peel, and pull methods
A. Kinbara and I. Kondo 71

Fracture mechanics tests for measuring the adhesion of magnetron-sputtered TiN coatings
D. Müller, Y. R. Cho, S. Berg and E. Fromm 87

The effect of residual stresses on adhesion measurements
M. D. Thouless and H. M. Jensen 95

Adhesion of diamond-like carbon films on polymers: an assessment of the validity of the scratch test technique applied to flexible substrates
B. Ollivier and A. Matthews 103

Adhesion improvement of RF-sputtered alumina coatings as determined by the scratch test
F. Ramos and M. T. Vieira 115

Scratch indentation, a simple adhesion test method for thin films on polymeric supports
G. D. Vaughn, B. G. Frushour and W. C. Dale 127

On the evaluation of adhesion of coatings by automatic scratch testing
T. Z. Kattamis 143
Continuous microscratch measurements of thin film adhesion strengths

Micro-scratch test for adhesion evaluation of thin films
V. K. Sarin 175

Mechanics of the indentation test and its use to assess the adhesion of polymeric coatings
R. Jayachandran, M. C. Boyce and A. S. Argon 189

Observations and simple fracture mechanics analysis of indentation fracture delamination of TiN films on silicon
E. R. Weppelmann, X.-Z. Hu and M. V. Swain 217

A study of the fracture efficiency parameter of blister tests for films and coatings
Y.-H. Lai and D. A. Dillard 231

Adhesion (fracture energy) of electropolymerized poly(n-octyl maleimide-co-styrene) coatings on copper substrates using a constrained blister test
J.-L. Liang, J. P. Bell and A. Mehta 249

An experimental partitioning of the mechanical energy expended during peel testing
R. J. Farris and J. L. Goldfarb 265

Comparison of finite element stress analysis results with peel strength at the copper–polyimide interface
R. H. Lacombe, L. P. Buchwalter and K. Holloway 283

Measurement of the practical adhesion of paint coatings to metallic sheets by the pull-off and three-point flexure tests
A. A. Roche, P. Dole and M. Bouzziri 299

Analysis of pull tests for determining the effects of ion implantation on the adhesion of iron films to sapphire substrates
J. E. Pawel and C. J. McHargue 323

Measurement of the adhesion of diamond films on tungsten and correlations with processing parameters
M. Alam, D. E. Peebles and J. A. Ohlhausen 331
Adhesion measurement of non-crystalline diamond films prepared by a laser plasma discharge source
F. Davanloo, T. J. Lee, H. Park, J. H. You and C. B. Collins 345

Nondestructive dynamic evaluation of thin NiTi film adhesion
Q. Su, S. Z. Hua and M. Wuttig 357

Recent developments in the laser spallation technique to measure the interface strength and its relationship to interface toughness with applications to metal/ceramic, ceramic/ceramic and ceramic/polymer interfaces
V. Gupta, J. Yuan and A. Pronin 367

Assessment of adhesion of Ti(Y)N and Ti(La)N coatings by an in situ SEM constant-rate tensile test
Z. Yu, C. Liu, Li Yu and Z. Jin 403

Adhesion studies of polyimide films using a surface acoustic wave sensor
D. W. Galipeau, J. F. Vetelino and C. Feger 411

Salt bath test for assessing the adhesion of silver to poly(ethylene terephthalate) web
J. M. Grace, V. Botticelli, D. R. Freeman, W. Kosel and R. G. Spahn 423

Testing the adhesion of paint films to metals by swelling in N-methyl pyrrolidone
W. J. van Ooij, R. A. Edwards, A. Sabata and J. Zappia 435
