Determination of Dose Equivalents Resulting from External Radiation Sources

Issued 1 February 1985
First Reprinting December 15, 1991
# Contents

Preface ................................................................. iii
Foreword .............................................................. vi

1. Introduction ......................................................... 1

2. Dosimetric Implications of Current ICRP Recommendations for Irradiations from External Sources ........................................... 2

3.1 Environmental Monitoring ........................................ 3

3.1.1 Ambient Dose Equivalent, $H^*(d)$ .................................. 3

3.1.2 Directional Dose Equivalent, $H'(d)$ .............................. 3

3.2 Individual Monitoring .............................................. 3

3.2.1 Individual Dose Equivalent, Penetrating, $H_p(d)$ ............ 3

3.2.2 Individual Dose Equivalent, Superficial, $H_s(d)$ ............. 4

3.3 Relationships Between the Specified Dose Equivalent Quantities and Protection Requirements ......................................... 4

4. Desirable Instrument Characteristics and Suitability of Existing Instruments ............................................................... 6

4.1 Ambient Dose Equivalent, $H^*(d)$ .................................. 6

4.2 Directional Dose Equivalent, $H'(d)$ ............................... 6

4.3 Individual Dose Equivalents, $H_p(d)$ and $H_s(d)$ ............... 6

References ............................................................... 7

ICRU Reports .......................................................... 8
