OPTICAL INSTRUMENTS
AND TECHNIQUES 1969

Proceedings of the Conference held at the
University of Reading during 14th–19th July,
1969, under the auspices of the International
Commission for Optics and arranged by the Optical
Sub-Committee of the British National Committee
for Physics.

Edited by

J. HOME DICKSON

ORIEL PRESS
CONTENTS

Preface ..........................................

Professor W. D. Ditchburn

Editor's Note ..................................

Part I. New techniques and instruments for spectroscopy, including modern interferometric methods, stimulated emission and non-linear phenomena.

High Resolution Fourier Spectroscopy ...........

Pierre Connes

Photon Correlations as a Technique for Studying Spectral Intensity Profiles ...........

L. Mandel

Field-Compensated Michelson Spectrometers ........

J. W. Schofield and J. Ring

A Double-Beam Far-Infrared Interferometric Fourier Spectrometer System ..............

L. W. Thorpe, R. C. Milward, G. C. Hayward and J. D. Yewen

InSb Tunable Detector and its Application to a new Far-Infrared Spectrometer ............

Hiroshi Yoshinaga and Junya Yamamoto

Spectromètre à Grilles Double Faisceau ..........

Andre Girard and Nicole Louisnard

Part II. Recent developments in optical production techniques, including the use of new materials.

Recent Developments in Optical Production Techniques ...........

Roderic M. Scott

New Techniques for Optical Polishing ............

W. H. Steel
Contents

Optical Finishing .......................... 85
Robert E. Hopkins and Charles Munnerlyn

Initial Stages in the Design of a Ruling Engine .............. 93
J. Dyson, M. J. Flude, S. P. Middleton and E. W. Palmer

A New Interferometrically Controlled Ruling Engine for High-
Performance Gratings up to $32 \times 20$ inches .......... 104
George W. Stroke and Albert E. Johnson

Aberration-Corrected Concave Gratings made Holographically .. 117
Jean Cordelle, Jean Flamand, Guy Pieuchard and Antoine
Labeyrie

Interferometric Methods for the Study of Non-Linear Anisotropy
in a Lasing Gas ................................ 125
H. de Lang

Transverse Deflections of a 45-inch diameter Lightweight Mirror
Blank: Experiment and Theory .................. 131
W. P. Barnes, Jr.

Optical Imaging by Frequency and Phase Modulation Techniques 138
A. I. Kartashev and A. N. Korolyev

The Use of Dilute Cermets in Infrared Interference Filters .. 147
P. W. Baumeister, G. Borak and L. Stensland

A Self-Aligning Laser Doppler Velocimeter .............. 158
M. J. Rudd

On the Use of Optical Interferometry for Studying Refractive Index
Distributions in Liquids at Temperatures up to 500°C. .... 167
Silas E. Gustafsson

Measurement of the Refractive Index of Optical Glass ..... 177
D. W. Harper and G. B. Boulton

Interferometric Measurement of Temperature Coefficients of
Refractive Indices of Optical Glasses ................ 189
Frances Green

An Interference Phenomenon Associated with Profile Imagery and its
Influence on Profile Inspection Measurements .......... 199
G. D. Dew

Optical Projection Systems for the Moiré Method of Surface Strain
Measurement ..................................... 200
A. Luxmoore
Part III. Optical metrology and optical processing of data, including coherent light techniques.

Interferometry with Scattered Light .......................... 213
   J. M. Burch

Angular Displacement Measuring System ..................... 230
   G. Bouwhuis

Measurement of Surface Roughness from Interferential Contrast .. 238
   C. H. F. Velzel

Some New Modifications of the Method of Three Slits in Measuring Applications ...................................... 249
   Miroslav Miler

Measurement of Surface Displacement by Interference of Speckle-Patterns ........................................ 256
   J. A. Leendertz

A Laser Speckle Interferometer for the Detection of Surface Movements and Vibration ................................ 265
   E. Archbold, A. E. Ennos and P. A. Taylor

Advantages of Multipass Interferometry ..................... 276
   P. Langenbeck

Photographic Emulsions as Phase Objects in Coherent Optical Systems .............................................. 286
   J. M. Hood

Theory of Operation of a Simplified Real-time Optical Matched Filter ........................................... 296
   C. Atzeni and L. Pantani

La Rectification des Lentilles Aspherique par Commande Numerique .............................................. 302
   T. Nakano

Fabrication de Lame de Schmidt ................................ 311
   Michel Detaille

Interference and Diffraction Phenomena Produced with Scattered Light ........................................ 319
   S. Debrus, M. Françon and M. May

Visualisation des Objets de Phase en Eclairage Incoherent .............................................................. 326
   M. H. Bourgeon and G. Fortunato
Part IV. Advances in assessment and specification of performance of optical instruments.

Advances in the Assessment and Specification of Performance of Optical Instruments

R. R. Shannon

Comparison of Different Methods of Assessing the Performance of Lenses

K. J. Rosenbruch

Utility of the Optical Transfer Function for Lens Evaluation

Teruji Ose

The Use of the Modulation Transfer Function (MTF) as a Merit Function in Automatic Lens Design

W. B. King

Extended Range Diffraction-Based Merit Function for Least Square Type Optimization

Abe Offner

Determination de La Forme de la Surface d’onde à Partir des Résultats de la Méthode de Fourcalt. Application au Système Optique de L’œil et aux Instruments Visuels

F. Berny and S. Slansky

Optical Evaluation of High Resolution Grating Spectrographs

E. van Rooyen and A. J. Boettcher

Measurement of the Transfer Function for Interference Phase-Contrast under Coherent Illumination

D. Haina and W. Waideleich

Part V. Image forming systems of essentially novel design.

New Developments in Photographic Objectives

E. Glatzel

A Unit-Power Telescope for Projection Copying

C. G. Wynne

A New Lens System for use in Optical Data-Processing

Brian A. F. Blandford
# Contents

2-Conjugate Zoom Systems  
*H. H. Hopkins*  
444

A New Ultrasonic Imaging Technique  
*Takuso Sato and Mitsuhiro Ueda*  
453

New Systems for Precision Optical Pyrometry  
*V. V. Kandyba*  
462

Apparatus for Measuring Aspherical Surfaces  
*J. Hajda*  
468

## Part VI. Systems design of astronomical instruments.

Systems Design of Astronomical Telescopes  
*P. B. Fellgett*  
475

Design for a Giant Telescope  
*Lawrence Mertz*  
507

A Compact, Three-Reflection, Astronomical Camera  
*N. J. Rumsey*  
514

A Family of Short-管ue, Wide-Field, Catadioptric Telescopes  
*D. S. Brown*  
521

Quantitative Treatment of ‘Seeing’ in Systems Design of Astronomical Telescopes  
*C. E. Coulman*  
528

The Effects of Astronomical Scattering and Absorption on the Performance of Optical Sensors  
*L. G. Mundie and H. H. Bailey*  
538

New Data on the Properties of Infrared-Transmitting Optical Materials  
*Stanley S. Ballard*  
546

Conference Delegates  
551

Index  
559
