### CONTENTS

#### PREFACE

1 INTRODUCTION

1.1 Electronic Structure of Solids
   1.1.1 Born-Oppenheimer (Adiabatic) Approximation
   1.1.2 Selfconsistent Field Approximation
   1.1.3 Density Functional Theory
   1.1.4 Local Density Approximation to the Exchange-Correlation Functional
   1.1.5 Beyond the Local Density Approximation
   1.1.6 Methods of Electronic Structure Calculations for Perfect Solids

1.2 Systems with Reduced Symmetry

1.3 Tight-Binding Approximation
   1.3.1 Tight-Binding Hamiltonian
   1.3.2 Semiempirical and First-Principles Tight-Binding Calculations

1.4 Resolvents and Green Functions

References

2 LINEAR MUFFIN-TIN ORBITAL (LMTO) METHOD

2.1 Secular Equation
   2.1.1 Atomic Sphere Approximation
   2.1.2 Single-Site Problem
   2.1.3 Muffin-Tin Orbitals and Tail Cancellation
   2.1.4 Lattice Fourier Transformations
2.2 Variational Principle
  2.2.1 Energy Linearization
  2.2.2 Linear Muffin-Tin Orbitals
  2.2.3 Hamiltonian and Overlap Matrices
  2.2.4 Potential Parameters

References

3 GREEN FUNCTION METHOD
  3.1 Green Functions in Solids
    3.1.1 General Comments
    3.1.2 Green Functions within Atomic Sphere Approximation
    3.1.3 Green Functions in the LMTO Method
  3.2 Tight-Binding LMTO Method
    3.2.1 Basic Definitions and Properties
    3.2.2 Particular Representations
    3.2.3 Ab Initio Tight-Binding Hamiltonians
    3.2.4 Screening Transformations and Reference Potentials
  3.3 Relation to the KKR Method
  3.4 Green Functions in Layered Systems
    3.4.1 Principal Layers
    3.4.2 Partitioning Technique
    3.4.3 Surface Green Functions and Embedding Potentials
    3.4.4 Semiinfinite Homogeneous Systems
    3.4.5 Green Function in the Intermediate Region
    3.4.6 Concluding Remarks
  3.5 Calculation of Observables
    3.5.1 Charge Densities
    3.5.2 Densities of States
    3.5.3 Bloch Spectral Functions

References

4 COHERENT POTENTIAL APPROXIMATION (CPA)
  4.1 Configurational Average of Green Function
  4.2 Single-Site Approximation

9 EFFECTIVE INTERATOMIC INTERACTIONS IN ALLOYS

9.1 Ising Model for Alloys
   9.1.1 Ising Hamiltonian
   9.1.2 Determination of Parameters
   9.1.3 Determination of Phase Diagrams

9.2 Generalized Perturbation Method
   9.2.1 Single-Site Approximation for Charge Densities
   9.2.2 Effective One-Electron Potential
   9.2.3 Total Energy
   9.2.4 Charge-Transfer Effects
   9.2.5 Band Term
   9.2.6 Derivation of the Generalized Perturbation Method
   9.2.7 Core Contributions
   9.2.8 Double-Counting Terms and Non-Spherical Corrections
   9.2.9 Madelung Contributions

9.3 Bulk Systems
   9.3.1 Case Study: Cu50Ni50 Alloy

9.4 Surfaces
   9.4.1 Case Study: fcc (001) Surface of Cu50Ni50 Alloy

9.5 Concluding Remarks
