CONTENTS

INTRODUCTION ........................................................................................................... 1
   General remarks, 1—Symmetry elements and symmetry operations, 1—Point groups, 5

CHAPTER I: ROTATION AND ROTATION SPECTRA ........................................... 13
1. Linear Molecules ................................................................................................. 13
   Energy levels, 14—Symmetry properties, 15—Statistical weights and influence of nuclear spin and statistics, 16—Thermal distribution of rotational levels, 18—Infrared rotation spectrum, 19—Rotational Raman spectrum, 20

2. Symmetric Top Molecules ............................................................................... 22
   Classical motion (vector diagram), 22—Energy levels, 24—Symmetry properties and statistical weights, 26—Thermal distribution of rotational levels, 29—Infrared spectrum, 29—Rotational Raman spectrum, 34

3. Spherical Top Molecules .................................................................................. 37
   Classical motion, 38—Energy levels, 38—Statistical weights and symmetry properties, 38—Thermal distribution of rotational levels, 40—Infrared spectrum, 41—Rotational Raman spectrum, 41

4. Asymmetric Top Molecules ................................................................................ 42
   Classical motion, 42—Energy levels, 44—Influence of non-rigidity, 49—Symmetry properties and statistical weights, 50—Infrared rotation spectrum, 55—Raman spectrum, 59

CHAPTER II: VIBRATIONS, VIBRATIONAL ENERGY LEVELS, AND VIBRATIONAL EIGENFUNCTIONS ................................................. 61
1. Nature of Normal Vibrations: Classical Theory ......................................... 61
   Vibrational degrees of freedom, 61—Vibrations of a mass suspended by an elastic bar, 62—Vibrations of the nuclei in a molecular model, 64—Mathematical formulation, 67—Normal coordinates, orthogonality of normal vibrations, 70—Potential energy and kinetic energy, 72—Degenerate vibrations, generalization of the definition of a normal vibration, 75

2. Vibrational Energy Levels and Eigenfunctions .......................................... 76
   General, 76—Energy levels, 77—Eigenfunctions, 78—Degenerate vibrations, 80

3. Symmetry of Normal Vibrations and Vibrational Eigenfunctions ........... 82
   (a) Effect of symmetry operations on non-degenerate normal vibrations 82
CONTENTS

(b) Effect of symmetry operations on degenerate normal vibrations.... 83
Two simple examples, 83—Plane doubly degenerate vibrations, 87
—More general doubly degenerate vibrations, 94—Complex normal coordinates, 98—Triply degenerate vibrations, 99

(c) Effect of symmetry operations on the vibrational eigenfunctions... 101
Molecules with non-degenerate vibrations only, 101—Molecules with degenerate vibrations, 103—Generalization, 104

(d) Symmetry types (species) of normal vibrations and eigenfunctions. 104
Point groups $C_1$, $C_3$, $C_7$, and $C_i$, 105—Point groups $C_{2v}$, $C_{2h}$ and $D_2 \equiv V$, 106—Point group $V_h \equiv D_{2h}$, 106—Degenerate symmetry types, 108—Point groups $C_{3v}$ and $D_3$, 109—Point group $C_{5v}$, 111—Point group $C_{av}$, 111—Point groups $C_{4v}$, $D_4$ and $D_{2d} \equiv V_d$, 112—Point groups $C_{6v}$ and $D_6$, 114—Point groups $D_{3d} (\equiv S_6)$ and $D_{4d} (\equiv S_{4v})$, 114—Point groups $D_{5h}$ and $D_{5v}$, 116—Point groups $D_{4h}$ and $D_{5h}$, 116—Point group $D_{6h}$, 118—Point groups $C_p$, 119—Point groups $S_4$ and $S_6$, 120—Point groups $C_{ph}$, 120—Point groups $T_d$ and $O$, 121—Point group $O_h$, 122—Point group $T$, 123

(e) Symmetry types (species) of the higher vibrational levels........... 123
Non-degenerate vibrations, 124—Binary combinations of a non-degenerate and a degenerate vibration, 125—Multiple excitation of a single, degenerate vibration, 125—Binary combinations of two different degenerate vibrations, 129—More general cases, 130

4. Determination of Normal Modes of Vibration......................... 131
(a) Number of normal vibrations of a given symmetry type (species).... 131
Sets of equivalent nuclei, 131—Non-degenerate vibrations, 131—Degenerate vibrations, 135
(b) Methods for the general solution of the secular equation............ 140
Solution in Cartesian coordinates, 140—Solution in “internal” coordinates, 142—Solution by the use of symmetry coordinates, 145—Application to non-linear $XY_2$, 148—Application to symmetrical planar $X_2Y_4$, 150—Application to linear symmetrical $XY_2$, 153—Application to pyramidal $XY_3$, 154—Solution by the use of mechanical models, 157

(c) Assumption of central forces........................................ 159
General considerations, 159—Application to non-linear symmetric $XY_2$, 160—Linear triatomic and plane more-than-triatomic molecules, 161—Application to pyramidal $XY_3$ molecules, 162—Application to tetrahedral $XY_4$ molecules, 165

(d) Assumption of valence forces....................................... 168
Application to non-linear symmetric $XY_2$, 168—Application to linear $XY_2$ molecules, 172—Application to linear $XYZ$ molecules, 173—Application to non-linear $XYZ$ molecules, 174—Application to pyramidal $XY_3$ molecules, 175—Application to plane $XY_3$ molecules, 177—Application to plane $XYZ_2$ molecules, 179—Application to linear symmetric $X_2Y_2$ molecules, 180—Application to tetrahedral $XY_4$ molecules, 181—Application to plane $X_2Y_4$ (point group $V_h$), 183—Other molecules, 186
CONTENTS

(e) Assumption of more general force fields
    186
    XY₂ molecules, 186—Pyramidal XY₃ molecules, 187—Linear X₂Y₂
    molecules, 188—Tetrahedral XY₄ molecules, 189—Plane X₂Y₄
    molecules (Sutherland and Dennison's method), 189—Other mole-
    cules, 191

(f) Intercomparison of force constants in different molecules, characteristic
    bond frequencies, stretching and bending vibrations, and related
    matters
    192
    Invariance of force constants in different molecules, 192—Char-
    acteristic bond (group) frequencies, 194

5. ANHARMONICITY AND INTERACTION OF VIBRATIONS: LIMITATIONS OF THE
   CONCEPT OF NORMAL VIBRATIONS
   201
   (a) Influence of anharmonicity for non-degenerate vibrations
       201
       A simple potential surface, 201—Classical anharmonic motion, 204
       —Energy levels, 205—Vibrational eigenfunctions, 209
   (b) Influence of anharmonicity for (non-accidentally) degenerate vibra-
       tions
       210
       General energy formula for the case of doubly degenerate vibra-
       tions, 210—Application to linear molecules, 211—Application to
       some non-linear molecules, 212
   (c) Accidental degeneracy, Fermi resonance
       215
       Qualitative discussion, 215—Mathematical formulation, 215—
       Application to CO₂ and similar cases, 217—Application to H₂O,
       218—Splitting of the t₁ degeneracy, 219
   (d) Several potential minima
       220
       General remarks, 220—Inversion doubling in NH₃ and similar
       molecules, 221—Optical isomers, 224—Torsional oscillations, 225

6. ISOTOPE EFFECT
   227
   Introductory remarks, 227—Triatomic molecules, 228—The
   Teller-Redlich product rule, 231—Resolution of the symmetry
   types of a point group into those of a point group of lower sym-
   metry, 235—Application to the unsymmetrically substituted iso-
   topes of an XY₄ molecule, 236

CHAPTER III: VIBRATIONAL INFRARED AND RAMAN SPECTRA
   239

1. CLASSICAL TREATMENT
   239
   (a) Infrared vibration spectra
       239
       Active and inactive fundamentals, 239—Overtone and combina-
       tion vibrations, 241
   (b) Vibrational Raman spectra
       242
       Elementary treatment of fundamentals, 242—Mathematical form-
       mulation: the polarizability ellipsoid, 243—Overtone and combina-
       tion vibrations, 245—Polarization of Rayleigh and Raman scatter-
       ing, 246
2. QUANTUM-THEORETICAL TREATMENT ................................................. 249
   (a) Elementary treatment of fundamentals .................................. 249
   (b) Rigorous vibrational selection rules ................................... 251
       Infrared spectrum, 251—Raman spectrum, 254—The rule of
       mutual exclusion, 256—Inversion doubling, 256
   (c) More refined treatment of fundamentals ............................... 258
       General rule, 258—Examples, 258—Alternative treatment; intensi-
       ties, 259
   (d) Overtone and combination bands ...................................... 261
       General remarks, 261—Overtone bands, 262—Summation bands,
       265—Influence of Fermi resonance, 265—Difference bands, 266
   (e) Polarization of Raman lines ........................................... 269

3. INDIVIDUAL MOLECULES .......................................................... 271
   (a) Triatomic Molecules ..................................................... 272
       Carbon dioxide, CO₂, 272—Carbon disulfide, CS₂, 276—Nitrous
       oxide, N₂O, 277—Hydrogen cyanide, HCN, 279—Water, H₂O,
       280—Heavy water HDO and D₂O, 282—Hydrogen sulfide, H₂S,
       HDS, D₂S, 282—Nitrogen peroxide, NO₂, 284—Sulfur dioxide,
       SO₂, 285—Ozone, O₃, 285—Other triatomic molecules, 287
   (b) Four-atomic molecules .................................................. 288
       Acetylene, C₂H₂, 288—Heavy acetylene, C₂HD and C₂D₂, 289—
       Cyanogen, C₂N₂, 293—Ammonia, NH₃ and ND₃, 294—Trihalides
       of phosphorus, arsenic, antimony, and bismuth, 297—Boron tri-
       fluoride, BF₃, 298—Phosphorus, P₄, 299—Formaldehyde, H₂CO
       and D₂CO, 300—Hydrogen peroxide, H₂O₂, 301—Other four-
       atomic molecules, 303
   (c) Five-atomic molecules .................................................. 303
       Carbon suboxide, C₃O₂, 303—Methane, CH₄ and CD₄, 306—CH₃D,
       CH₂D₂, CHD₃, 309—Carbon tetrachloride, CCl₄, 310—Methyl
       chloride, CH₃Cl, 312—CH₂F, CH₂Br, CH₂I, CD₃Cl, CD₂Br, 314—
       Chloroform, CHCl₃, 316—Methylene chloride, CH₂Cl₂, 317—
       CHClBr and CHClBr₂, 320—Formic acid, HCOOH and HCOOD,
       321—Other five-atomic molecules, 323
   (d) Six-atomic molecules .................................................... 323
       Diacetylene, HC≡C—C≡CH, 323—Ethylene, C₂H₄ and C₂D₄,
       325—Tetrachloroethylene, C₂Cl₄, 328—Cis and trans C₂H₂Cl₂,
       329—CH₂CN and CH₂NC, 332—Methyl alcohol, CH₃OH and
       CH₃OD, 334—Other six-atomic molecules, 335
   (e) Seven-atomic molecules ............................................... 336
       Sulfur hexafluoride, SF₆, 336—Methyl acetylene, CH₂=C≡CH,
       337—Allene, CH₂=CH=CH₂, 339—Ethylene oxide, C₂H₄O, 340—
       Other seven-atomic molecules, 342
   (f) Eight-atomic molecules .................................................. 342
       Ethane, C₂H₆ and C₂D₆, 342—C₃H₄Cl₂, C₃H₂Cl₄, and the question
       of rotational isomerism, 346—Other eight-atomic molecules, 351
(g) Nine-atomic molecules
Cyclopropane, $C_3H_6$, 352—Dimethyl ether, $(CH_3)2O$, 353—Propylene, $CH_3—CH=CH_2$, 354—Other nine-atomic molecules, 356

(h) Ten-atomic molecules
Dimethyl acetylene, $CH_3—C≡C—CH_3$, 356—Azomethane, $(CH_3)_2N_2$, 357—Other ten-atomic molecules, 359

(i) Eleven-atomic molecules
Propane, $CH_3—CH_2—CH_3$, 359—Other eleven-atomic molecules, 362

(j) Twelve-atomic molecules
Benzene, $C_6H_6$ and $C_6D_6$, 362—Other twelve-atomic molecules, 369

CHAPTER IV: INTERACTION OF ROTATION AND VIBRATION, ROTATION-VIBRATION SPECTRA

1. LINEAR MOLECULES

(a) Energy levels
Elementary treatment, 370—Symmetry properties of rotational levels, 372—More detailed theory of the rotational constants $\alpha_i$; Coriolis interaction, 372—$l$-type doubling, 377—Perturbations, 378

(b) Infrared spectrum
Selection rules, 379—Types of infrared bands, 380—$\Sigma—\Sigma$ bands [type (1)], 380—$\Pi—\Sigma$ bands [type (2)], 384—$\Pi—\Pi$ bands [type (3)], 389—Combination differences, evaluation of rotational constants, 390—Examples, 391—Determination of internuclear distances: isotope effect, 395

(c) Raman spectrum
Selection rules, 398—Types of Raman bands, 399—Observed Raman bands, 399

2. SYMMETRIC TOP MOLECULES

(a) Energy levels
Non-degenerate vibrational states, 400—Degenerate vibrational states, 401—Symmetry properties of the rotational levels, 406—Inversion doubling, 411—Perturbations, 413

(b) Infrared spectrum
